In June 1898 he returned to New Brunswick greatly afflicted with kidney trouble which at times became exceedingly painful. In addition to this a malignant cancer had begun its work, thus increasing his severe affliction owing to which he could get but little rest night or day. Amid all his suffering he continued to be upheld by a hope in Christ which never failed him. He rejoiced in the sovereign grace of God, as his support to his dying hour. Bro. The Largest Company in The World.

The relation between subscribers and publishers of the FAMILY HERALD AND WEEKLY STAR, of Montreal, form, it may be said, the largest Joint Stock Company in the world. It seems that out of every dollar sent in by a subscriber a certain percentage is put aside to be spent exclusively on improvements in that great paper, so that every subscriber sending in his dollar receives good interest on his money by way of such improvement. Through this system subscribers this year receive a very much enlarged and improved paper and two beautiful pictures, "BATTLE OF ALMA," in colours, and "PUSSY WILLOWS," Certainly a great investment for one dollar.

New Ideas.

All progress, of course, is the result of new ideas, and often of ideas that the great mass of people deem impracticable and cranky. The people who have made our present brilliant civilization were those who thought better than the millions thought. They conceived something novel, something that the plodders never conceived, and gave us the application of steam and electricity, the telegraph and telephone, our improved breeds of stock and all the modern implements and machinery that we have upon our farms. Fulton, Watt. Morse, McCormick, and the whole line of inventors, were simply original thinkers.

But in considering these great inventors and their achievements, the humble inventor of small things should not be overlooked. His efforts have cleared from the pathway of invention innumerable difficulties, and have rendered easy a task that a few years since would have been impossible. The mind cannot conceive of the possibilities that might have been within the grasp of the eminent inventors mentioned above, were they to begin their work under the mechanical and scientific conditions of to-day.
