Hon. Thomas Baillie, Richibucto River, can have the small Island, called St. Paul's Island, Robert Bone, St. Nicholas River, refered to surveyor General,</p>

Answer... Cannot be Complied with.

ABSTRACT
Of the Hon. R. J. Uniacke's Evidence, before a Committee of the House of Commons, on the 11th April, 1826.

542. What is the number of the population that are now employed in the fisheries of Nova Scotia and New-Brunswick?—I should suppose they are fully equal to 20,000.

543. What are the particular points where fishing stations are found?—The fishing stations upon the coast of Nova Scotia range along the whole shore from Cape Sable to Cape Canso, or Cape Breton. The banks are distant from the shore from ten to fifteen leagues, and then, from the Isle of Magdalen, the fishery ranges over to the Newfoundland shore, and

takes in all the long banks of the Newfoundland coast; and then there are the great sea banks of Newfoundland also, which are in conjunction nearly with them, which touch them in some parts. Then the fishery commences in the Gulf of St. Lawrence and upon the coast of Labradore, and it runs from the Straits up to the Island of Anticosti; the fish, both small fish, and cod fish, abound there in the greatest plenty. Then the fishery in the Gulf ranges again upon the north side of P. Edward's Island, and runs round the Island of Cape Breton. In fact I may say that the fishery ranges all round the coast, all round Newfoundland, coming through the Straits of Belisle, coming round the Gulf of St. Lawrence, and coming down to

the north side of Prince Edward's Island, and then round the Island of Cape Breton, and from the Gut of Canso to Cape Sable. There is also a fishery in the Bay of Fundy, upon both sides of it, as high up as the Isle of Hault; in fact on every part of that shore there is a fishery; it is hardly necessary that I should particularize one part more than another because every place is a fishery.

544. What is the nature of the fish that are caught?—The fish are principally cod fish; there are mackarel, herrings; alewives are the principal fish that are caught, the French call them gasperieux; the gasperieux, the herrings, and the mackarel, are all pickled fish, cured in barrels; the salmon is likewise in great abundance,

both on the Labrador shores and on the Gulf of St. Lawrence; that fish is also cured in barrels, and pickled; the cod fish is all dry. Those are the descriptions of fish that are not considered as fish worth curing for export; but those are the fish that constitute the staple of the Fishery.

545. Upon what principles is this Fishery in general conducted; are the individuals belonging to it in the service of any capitalist, or is it done by individual exertion?—It is done both ways; there is one description of fishing vessels which may range from about forty tons to eighty or a hundred tons, which are generally fitted out by merchants, who employ men upon wages, and who take of course the whole produce of the
