# THE CHRISTIAN MESSENGER.

" HAVELOCK'S LAST CAMPAIGN" is the subject of a lecture lately delivered by the Rev. John Lathern, and now published in pamphlet form. Our thanks are due for a copy. The thrilling story of Cawnpore and Lucknow will bear repeating, and will he cherished in the memories of Englishmen, and referred proper, as they are compelled to live near their to, as a bright page in the history of India, for many generations to come. We did not have the opportunity of hearing the lecture. but have now read it with much interest and pleasure. The theme is worthy of the fervid eloquence of the author. Perhaps no incident in modern history brings out more prominently the finest features of British courage, government; between oppression and liberty; between the Crescent and the Cross. Against fearful odds, in both numbers and the ability to obtain supplies, the British troops shewed more than a national interest in this contest, and the remarkable success which attended the said campaign. As Nova Scotians we had a Sir John Inglis shut up in Lucknow, enduring untold sufferings, and as Baptists we had a General Havelock, maintaining his regular christian worship in his army, and hastening on to the relief of the Nova Scotian General, which he did by atmost miraculous means.

We thank Mr. Lathern for reproducing and reviving in our memory these pages of eastern history. The tribute paid to Have- 150, there are 20 tenant-houses, occupied by 111 lock's christian character we take the liberty families, 5 stables, a large soap and candle facof copying for our readers :--homage, and deserves the tribute of special re- beyond any power of description.' In general, gas. A late Toronto paper contains acdistinguished for the unshrinking avowal of his ilies to a house among the poor is 7, or about places in Canada. The following may be convictions, and for uncompromising fidelity to the faith of Jesus Christ. " Every inch a soldier, and every inch a christian," according to the testimony of Lord Hardinge, he demonstrated the compatibility of religious fervour with military enthusiasm. By the sublime consistency of christian character, combined with the highest professional distinction, he compelled thoughtless men to do homage to the religion of Christ. Though his noble catholicity of feeling was not restricted by the lines or limits of denominationalism, vet holding views of christian doctrine and discipline in accordance with those maintained by the Baptist Section of the Church of Christ, he became,-soon after his marriage to the daughter of the Rev. Dr. Marshman, the illustrious Serampore Missionary, in 1829 .- a member of that community, and continued, until the period of his death, one of its most steadfast adherents and one of dits brightest ornaments. But never was the earnest religiousness of Havelock more conspicuous than in his last campaign. He had an altar in his tent. He cared for the or prowess of his troops. On the morning of the final struggle for the relief of the Residency, -the memorable 25th,-he rose before break of day, passed some time in prayer, and commended death ! himself, and his army, to the protection of a to win blood-stained wreaths of earthly fame; but coveted a higher distinction-the crown for duty done.

parks. Unlike Philadelphia, London, and most other large cities, which have a back ground of hundreds of square miles upon which to extend, according to the exigencies of the population or of business, New-York is limited in its power of expansion, and must accommodate itself to its given area. While it is true that a large busiwill be of the better class. The laboring popuwork. New York has, thus far, grown without any control or supervision, and its population is conditions as they find their homes, without any ing from gold discoveries. power either to change or improve them. Following the natural law which governs the movements of such a population, the wealthier or endurance and heroism. The whole rebellion independent class spreads itself with its business was a trial between barbarism and enlightened arrangements over the larger proportion of the area, and the poorer or dependent class is crowded into the smallest possible space. Already those of the United States and Canada, remiles with the dwellings of a population not far from 1,000,000, and all its commercial and manuthe superiority of the Anglo-Saxon race, over facturing establishments. And the result is, as the masses of Hindoos in rebellion. We have might have been anticipated, the dependent class, numbering fully one half the people, is crowded into tenant-houses which occupy an area of not more than two square miles. Such ample, it is estimated that there are three contiguous blocks of tenant houses which contain a larger population than Fifth-avenue; or, again, if Fifth-avenue had front and rear tenant-houses as densely packed as tenant houses generally that single avenue. A single tenant-court in ficial light and heat. the Fourth Ward is arranged for the packing of 1000 persons. A resident of the same ward re-

ports that : ' On a piece of ground 240 feet by tallow gave their dim unwholesome aid to suptory, and a tanyard, the receptacle of green hides. The filth and stench of this locality are it may be stated that the average number of fam- counts of discoveries in four or five different 35 persons. "A citizen who witnessed the riots thus truthfully and graphically describes the inmates of tenant-houses: ". The high brick blocks and closely-packed houses where the mobs originated seemed to be literally hives of sickness and vice. Lewd, but pale and sickly young women, scarce decent in their ragged attire, were impudent and scattered everywhere in the crowd. But what numbers of these poorer classes are deformed-what numbers are made hideous by self-neglect and infirmity ! Alas ! human faces look so hideous with hope and self-respect all gone ! And female forms and features are made so frightful by sin, squalor, and debasement! To walk the streets as we walked them, in those hours of conflagration and riot, was like witnessing the day of judgment, with every wicked thing revealed, every sin and sorrow blazingly glared upon, every hidden abomination laid bare before hell's expectant fire !' " With streets proverbially filthy, and other spiritual welfare of his soldiers. He trusted common nuisances, this city has two hundred flames lasted until three o'clock this morning, more to a Divine arm than to his own, the skill slaughter-houses many of which are in the burning twelve hours." most thickly populated districts,-What a field for epidemics, disease, and premature It is an interesting enquiry to make, what gracious Providence. He publicly ascribed vic- is the provision of a religious nature for this tory to Almighty God. He was not ambitious large mass of humanity? We have from another source, the N. Y. Observer, an interesting table of the churches of this great Babylon. It appears that there are but three hundred and six church edifices-less on an average than one to 3000 people. In 1785 there were but nine churches. It will be each denomination has made during the past

about thirty four square miles, inclusive of its others not known at school but who wander of the lakes, and were liable to the same conin the streets with none to take care of them ?

#### PETROLEUM.

Colossal fortunes have of late been made ness population will gather upon the adjacent by dealing in this article and the lands whence shores, it is equally true that these non-residents it is derived. A number of wealthy companies are formed with a capital of millions of lation will, for the most part, remain upon the dollars for purchasing lands and pumping up island, and must be accommodated in the city the oil from the vast deposits supposed to be inexhaustable beneath them. We scarcely take up a paper without reading of fresh disestimated at 1,000,000 of persons. Of this coveries of the article in the United States number, at least one half are of the laboring and and Canada. In many places the excitement dependent classes, compelled to live under such caused by these is greater even than that aris-

It is not easy to form a theory free from objection to account for its presence in the bowels of the earth. Wells of the article have been known to exist in the east-Persia and Burmah-from time immemorial, but New-York has covered about 8 of its 32 square cently discovered, are, in the quantity of their yield, far beyond any that have been discovered in other countries. The theory advanced by Professor Bowen concerning this substance is, that by decomposition of the enormous vegetable productions in the earlier ages of the earth, and during the process of the forcrowding amounts literally to packing. For ex- mation of coal, a dense exhalation was produced, which, becoming condensed, would combine with the resinous and oily juices of the torests, and form large beds or lakes of this liquid substance now so usefully employed are, there would be a population of 100,000 on for the purposes of supplying us with arti-

Already quite a revolution has been effected in these respects. Where formerly oil and pliment our daylight, there, now, at a much less cost, we may enjoy a brilliant, steady, pleasant light, superior in some respects to taken as a specimen : "We have not come to oil yet in Wardsville but gas and that big, at 46 feet from the sur face. The company having determined to test the surface with a small augur,  $3\frac{3}{4}$  inches to the rock, by so doing would form a good opinion as to the probable cost of putting their well down. Having commenced operations yesterday, while the President was with the contractor at three o'clock p.m., the water in the bole rose to the surface, then receded. All thought that something would soon come, and before the augur could be got out, up went water, mud, &c., to a height at least of 60 feet. Then it roored like the sound of distant thunder; a match was placed near the hole, and all at once an explosion; the flames rushed high up in the air thirty feet. Hundreds from the county of Newbury, Cashmere, and those from the country who were in town trading with the merchants, and the townsfolk, flocked to see the great sight, and a beautiful sight it was at night, lighting up the whole valley where the well is situated. The

"New-York is an island having an area of then asked. Who can tell the number of tended hundreds of miles over the sloping plains tingencies of ultimate decay and destruction as the forests now existing."

April 26, 1865.

"They were the most enormous fields of vegetation which have ever yet flourished upon the face of the globe. This vegetation grew in undisturbed luxuriance. It was not depredated upon by prowling animals. The atmosphere was composed largely of carbonic acid gas, which stimulated the growth of the trees. and prevented animal existence, and probably, also, any tendency to combustion. As before stated, the crust of the earth was very warm. and the atmosphere very humid, consequently the growth of vegetation was very rapide But the forests would at times yield to that unspar ing law which levels everything. Whether by tempests, or the overpowering gravity of their elevated tops, or the prostration of one upon the other-it is certain that entire forests would finally fall, to give place to a new growth. Accumulating thus on the sloping prairies, constantly moist and wet with the atmospheric exhalation and condensation, the prostrate vegetable material would be exposed to termentation and distillation. Trunks and fragments of trees, and the accumulating rubbish of the forest, under the smouldering fermentation thus evolved by the interior heat of the earth, would part with their resinous and oily juices, while the atmosphere would be blackened by the smoke and gas. The whole earth was thus enveloped in the fermenting process. The gases ascending from the smouldering vegetation would be arrested by the fogs and vapors of the atmosphere, and thrown down upon the earth in the form of soot and lampblack. The soot would accumulate like layers of snow, and uniting with the oily liquids issuing from the vegetable mass, would be borne off to the waters of the adjacent lakes."

It is supposed by many that the crude petroleum will soon take the place of coal for steam and heating purposes; and a little further contrivance will give us petroleum stoves, to be used in preference to those for wood and

## " In hoc signo," pale nor dim Lit the battle field for him."

Religion ennobled his aims, purified his motives, exalted his courage, sanctified his genius, and threw its charm around his life. "The seen by the several columns below the progress name of Havelock," says Count Montalembert, " recalls and sums up all the virtues which the twenty years :---English have exercised in this gigantic conflict. Thrown suddenly into a struggle with a great I peril before him, and insignificant means wherewith to overcome it, he surmounted every thing by his religious courage." Religion nerved the soul of the great Commander for heroic effort; was the central, controlling, all dominant influence which swayed his being, and developed that " antique grandeur of character" to which the celebrated French author has so emphatically and eloquently referred. Here is another from the Fergus Constitution:

"Up to the hour of going to press, the excitement still continues. Bottles filled with the ile dwell. are on exhibition, and old flannels which have been dipped in the new oil springs are floating from the residences of some gentlemen, who appear to be good judges of coal oil, and where coal oil ought to be found. One of the fortunate proprietors has already refused \$4,000 for a lot in the coal oil region, Mr. R. Todd, who is acquainted with the Enniskillen wells, declares that the new oil springs of Fergus will far outstrip the ones at Enniskillen.

The following is a sketch of Prof. Bowen's theory.

"In the United States the rocks in the Devonian stratum constitute the veins of the coal or of those who desire to possess a copy of the oil basins. During this period (Devonian) there were great inland seas or lakes which received be but a week or two pass before it may be  $\mathbf{32}$ 22 the waters of numerous rivers,"

" The Devonian Lakes drained the surrounding country in the same manner as the lakes OUR friend, the editor of the Christian and rivers of the present day, and, therefore, it is highly probable that before the elevation of the Alleghany mountains, and while the sea was still undulating over the country now comprising Alabama, Louisiana, and the States north and northwest, the whole system of drainage was west and southwestward, and the coal basins of Illinois and Missouri were from time to time invaded by the sea." " After the Devonian basins began to fill up, by the sediment the circumstances in which it is placed, redrained from the adjacent rocks, and after their broad margins had been converted into marshy flats or prairies, precisely similar to those of a year to the others. Lake St. Clair, vegetation flourished immediately in the most extraordinary luxuriance. The vegetation must have consisted mainly of flowerless grasses, perhaps not dissimilar to those friend is under a wrong impression respecting which flourish spontaneously along the marshy bottoms of rivers and oceans. The great heat The Visitor says :

coal. It is also even thought that the gas now used for fighting cities and dwellings will ultimately give place to this mineral of

HER NATIVE PREACHER FOR BURMAH. -A letter from Rev. John Davis, Charlotte Town P. E. I., makes the following reference to the few lines inserted in the Messenger two weeks since :

Charlotte Town, P. E. I., April 18, 1865. My DEAR BROTHER .-- I want to say, first of all, that your Halifax friend who proposes to give fitty dollars (\$50) for the support of an additional native preacher in Burmah may now hand his cheque to Dr. Tupper for that amount. 1 was mentioning the matter to a friend of mine last night by way of inquiring whether we, the Baptists in and about this city, could not take up the brotherly challenge? That brother, this morning informs me, that he accepts the challenge on his own account. Thus, the second fifty dollars required in the case is secured, and your friend's desire is gratified."

The cheque came enclosed. We obtained the fifty dollars from the friend who first proposed the matter, and have transmitted the amount (\$100) to Rev. Dr. Tupper. Such spontaneous offerings, both anonymous, are gratifying indications of a desire to send forth the gospel to the regions beyond, which we trust may bring down blessings on the donors and on the communities in which they

Our readers' attention is invited to a Prospectus in another column of "Memorials of the Life and Times of the late Rev. Harris Harding of Yarmouth, N. S," prepared by Rev. John Davis. We hope the number of names required will soon be made up, so that this addition to our small stock of our provincial and denominational literature may be secured without delay. We shall keep a list of Subscribers' names at our office and shall be glad to receive the names work. If it be taken up promptly there need announced that it will be published.

Visitor, faucies that the recent action of the Legislature, with respect to the College question, settles the "vexed question" of Dalhousie College. We beg to say that we think very differently. Supposing Dalhousie to be, as he says, "generally regarded as nothing more nor less than a Presbyterian College," ceiving about \$4,000 per annum, would searce. ly be compensated for by an addition of \$400 On behalf of the Episcopalian body we would take the liberty of saying that our the amount they receive from the Province.

HAVELock's name will go down to posterity enshrined in a glory all its own. Almost ungivalled military genius in combination with grare moral excellence, greatness and goodness, will secure for him imperishable renown. He will be enrolled amongst the titled warriors of ber of churches; the Jews have more than the ages, as the CHRISTIAN HERO.
