NERSERY SONGS OF SCOTLAND.

My bairnies dear, when you go out With other bairns to play, Take heed of everything you do, Of every word you say; From tricky, wee, mischievous loons Keep back, my bairns, keep back; And aye to all such usage give As you would like to take.

To twist the mouth and call ill names Is surely very bad, Then all such doings still avoid, They'd make your mither sad. To shield the weakly from the strong, Be neither slow nor slack, And aye to all such usage give, As you would like to take.

A kindly word, a soothing look, Have ready aye for all; We are one Maker's handiwork, He made us-great and small-We're all the children of his care; O, then for His dear sake Be sure such usage still to give, As you would like to take.

Christianity and Science: the adaptation of similar means in the production of widely different results. And it is a law which, as far as our reason can tell us, is one tendencies of orthodox theology; the spirit of of necessity. Were man, for instance, with his criticism; skepticism and neology; the carholic knowledge and experience, and assuming him to have the artistic skill, called upon to make a plant, he would form the roots and the stem; he would then modify the material of the stem into flat expansive processes, through which the vital fluids of the body could circulate, and become ærated by the atmosphere. He would then alter these processes into the complex and beautiful arrangement by which the species would be propagated. It would not be consistent with the unity and perfection of the plan were be now to introduce new textures. He would make use of the leaves, and would modify one into a bract, another into a calyx, another into a stamen, and thus constitute a flower. And the necessity of this is apparent, for the flower has to be nourished through the medium of leaves, and therefore on just the same plan throughout. And so we find that Infinite Wisdom has adopted that which our reason calls indeed be compared with the larger States of perfection in the creation and organisation of Europe.
