

Agriculture, &c.

WORK HORSES IN SPRING.

Horses that have been nearly idle and on reduced grain feed during the winter months should have their grain gradually increased for two or three weeks, and perhaps longer, dependent upon the condition, age, etc., of the animals, previous to the commencement of spring work, and as the ground is wet and heavy in early spring, the work also should by all means be gradual.

1st. If I have a hard day's work to perform, I do not overfeed that day. 2nd. If I must drive ten miles an hour, be sure that my horses have not full feed or water immediately previous to the drive, as a full stomach and violent or over-exertion do not harmonize in man or beast.

3d. I never feed grain when my horses are very warm—but of water (no matter how warm the animals) I always give a little to cool the mouth and partially quench the thirst.

4th. I give a small quantity of common salt once a week. No drugs of any kind are used—I do not believe in drugs for man or beast—or curing one disease by creating a worse one.—Prairie Farmer.

LIME AROUND APPLE-TREES.—We have known some farmers make it a regular practice for a succession of years to throw caustic lime around their apple-trees in the spring and summer. We once noticed that a tree standing in the immediate vicinity of our dwelling had all at once put forth with renewed energy, and we were at a loss for some time to define the cause.

BRAN FOR MILCH COWS.—One of our best dairymen in this section relies mainly on bran as feed for his cow, and finds it produces the most milk. He gives them as much as they can eat, and wants them to eat all they can, as they return him a vastly increased value in milk.
