Agriculture, &c.,

PITY THE FARMER.

Pity the farmer, hear him complain, "Week after week not a sprinkle of rain, Yellow and crisp is the grass on the plain, Parched and withered the garden and grain, Want will o'er take us; a famine is near,-What is the matter? 'tis such a strange year."

Pity the farmer, a twelve-month recall, Tempest and rain were the horror of all, Mud in mid-summer, mildew on the wall, Blight in the fruit buds, rot in the stall. Pity the farmer, and give him thine ear, We shall all suffer, 'tis such a strange

Pity the farmer, the harvest-time o'er, Rain after rain as it had been before, Storehouses filled and he plans to build more, Murmuring always, just as of yore. Pity the farmer and hear him declare, Counting his gains, " 'Tis such a strange

Pity the farmer, God pity him, too, That in the sunshine as well as the dew, That in the tempest and torrid heat, too, He cannot see a Jehovah smile through. Woodstock Sentinel.

SEVEN KINDS OF OATS TESTED .-Jacob Dunton, of Philadelphia, writes to the American Agriculturist as tollows: Last spring I purchased seven varieties of oats from reliable seedsmen, in quantities varying from 1 peck to 6 bushels. I gave them equal culture, upon the same field, at Cnestnut Hills, with the following results. I could see no difference in the Norways, purchased from different parties. As the fancy sorts averaged about \$3.50 per bushel, you will be able to judge whether it would be advantageous to continue to plant them:

" Varieties.	Yield from Weight 1 bushel. lbs					
Common Oats	8.2	27 2				
Prince Edw. Islands		29.				
New Brunswick	8 44	30. 30.				
Surprise		32.				
Nova Scotia	7.	32.				
Scutch Potato	7.	32.				

Onions. - Many complain that onions do not keep. The trouble is in keeping them too warm. The onion is a bulb, a plant at rest, and the least warmth starts it into activity. It is much better that onions should remain frozen through the winter, provided they can thaw gradually, than to put them in a cellar or other warm place where their vegetative powers will be aroused. If put in large heaps onions will be sure to spoil; but if spread in thin layers and covered with hay and straw, so that if frozen the thawing may be gradual, they will keep well through the winter. It is the custom with onion-growers to get their crop to market as soon as possible. If they were to provide proper storage, they would realize much more for them, when sent to market later in the season.—American Agriculturist.

TOP DRESSING ON GRASS LAND .-We have frequently called the attention of our readers to this method of sustaining the fertility of meadows. The compost should be fine, so as to be spread evenly on the surface, and find its way readily to the ground in small particles ready to be dissolved and carried down to the hungry mouths below that are reaching out in every direction for food. Manure or compost applied in lumps is of very little value in enriching the soil. The surface manuring should be done early, in order to have the best effect on the crop of next season. If the manure is reduced to the proper condition of fineness, and is not already exhaling its valuable properties in the process of fermentation, there is no occasion to fear loss by evaporation. Its nutritive properties will be drawn downward to meet the requirements of the growing grass .- Vt Record and Far-

A farmer of Springfield, Ohio, recently picked 400 bushels of cranberries from three acres, and sold the lot for \$1,520.

Hon. Horatio Seymour, of New York, is President of a cheese factory, which he considers to be more useful than if he had been elected President of the United States.

The import of beet root sugar into England from the Continent is far more considerable than is generally supposed, and has averaged during the last three years something like 50,000 tons-an amount equal to that which she draws from the Mauritius.

A MODEL STABLE KEEPER. - An exchange in giving an account of one of the best Livery stables in New York, says the proprietor of the esto the men he employs, and the following are among his rules :-

Turnip. 1 oz. to 2,000 feet.

"First No man will be employed who drinks intoxicating liquor. His men, like his horses, must drink water -cold water only.

"Second-No man must speak loud to any of the horses, or in the stables where they are. Horses of good blood are nervous; and loud. excited conversation is felt by every horse in the stable, who hears it. Excited words addressed to one horse are felt by every other horse who hears them, and keeps them all nervous and uneasy.

"Third-No man may use profane language in the hearing of the horses. They are gentleman's horses, and understand what profane language and the excited tones which accompany it mean."

The last is no doubt an excellent regulation, though the reason assigned is somewhat ambiguous, and rather hard on the "gentlemen."

A HOME-MADE EARTH CLOSET.

Much ingenuity and contrivance has been expended in efforts to secure the most economical arrangements in this matter. The following, from the pen of J. B. Lyman, the agricultural editor of the N. Y. Tribune, is one of the most simple and best contrizances we

I built a house lately, and managed matters in this way: I bought two camp kettles, sheet iron cylinders with a bottom and a bail; they cost a dollar each, and measure perhaps 14 inches across the top. The seat has hinges, and the kettles stand on masonry, so the seat when down touches the rims. The bail is long enough to fall over the rim, and touches the side half-way down. The shell of a box-turtle serves as a scoop. Once a week the box is filled with dry garden earth or with fine clay; once a week it is necessary to lift the seat and take out the kettle and add the contents to the manure pile, a chore that consumes five minutes. Before the kettles were used they received a thorough coat of coal tar thickened with slate-flour.

We like the system much. It allows a closet to stand where with any of the old methods it would breed disease. It is cheap and simple; it saves all the night soil; we have no smell, for if any is perceived, two shovels of earth will quench it. It makes a light weekly chore of what would otherwise become an odious semi-annual job. In the hottest weather we scatter a little quicklime or lime with carbolic acid. Lime alone will quench the ill odor of the fluids of sewage, and the dry earth muffles the other. In freezing weather sifted coal ash is a convenient substitute for soil. Any earth that is not sandy will answer; but it should be dry. which the most hand ad

It is best to handle calves and colts as much as possible, and pet them, lead them with a halter, and caress them in various ways. Young stock managed in this way will always be docile and suffer themselves to be approached and handled, both in the pastures and in the barn.
