SWIMMING API

Frederick Barnett. patented a povel yet s for swimmers. The in of supplying to man an apparatus peculiar to th hands, he has a large which is held to its place ing over the fingers, and the wrist. The surface the water by these fit to add greatly to the the arm, but not so lar the muscular power. very much reduce the a quired in swimming. ingenuity is displayed fittness of the fins for are attached to the an formed that they act both in the movement legs and throwing the act so finely in treading mers call it, that one on the water, at least ference between swir apparatus and without like the difference of with the handle and oar. The old swimme in using the fins at f surprised to find with he can swim without easily swims twice apparatus as without he can sustain himself four hours upon more slowly. Roasted neat has the water, or swim many miles .- Jour- richer flavor than boiled, because cernal of Chemistry.

THE THERMOMETER .--- Thermome. ter is a Greek word, and mouns heatmeasure. Per maps all the young folks do not know the meaning of zero, that frosty word which they hear spoken of so often. Let us try to explain it ot them.

Mr. Fahrenheit, who invented the kind of thermometer which is used in this country and i , England, lived in warmer climate than ours. He never treathed the keen air of a zerocold morning. But he knew what the boys and girls who make ice cream know so well-that a mixture of snow and salt, or pounded ice and salt, is much colder than ice or snow alone. Indeed, he thought that such a mixture was so cold that there could not possibly be any heat in it at all. So he concluded that the temperature of this mixture would be a good starting point from which to mark off the scale of his thermometer. Putting the build into the snow and salt, he marked the point to which the mercury which fills the tube fell, 0 (cipher) zero, nothing; because, as before said, he thought the amount of heat was nothing. But had he lived in our cold New England, instead of Germany sh would have found perhaps to his sorrow, that our wintry air is often colder than his ice and salt Then, if the air is even colder than this mixture, it follows that there must be some heat in the ice and salt to make it warmer than the air. So Mr. Fahrenheit was mistaken bout his zero's expressing, as he intended it should, no heat. Indeed, chemists tell us that, by an experiment which they know how to perform, they can produce a degree of cold compared with which Fahrenheit's zero is quiet hot.

A LARGE BONE CAVE has been discovered in Bavaria by an excavation for a railroad. It contains a layer, three feet deep, of ashes, coal, broken pottery, splinters of flint, and the bones of a variety of animals, chiefly of bears, hyenas, and lions. Above the layer are traces of the presence of man, such as flints in great numbers, one of them toothed like a saw. There also exist remains of horses, oxen, cats, wolves, and the bones and scales of pike and carp. The fragments of pottery are very numerous, indicating a rude manufacture. There is a block of granite, with one smooth side, and two holes in the upper side, as if it was designed for a millstone. Several spindles made of clay have been discovered.

tain aromatic principles are developed in that process, but it is less digestible and attended with more waste of the fatty substances in cooking. Stews and hashes made from fresh meat are pronounced more nutritious than those made from meat that has been cooked before, and salted meat is less nutritious than fresh, as it loses so much of its juices in the brine. Frying, as all dyspeptics know, is about the worst possible way of cooking meat. Broiling, when nicely done, gives a more digestible dish than roasting or frying.

A REMEDY FOR SMALL-POX .--- The German Reformed Messenger is in receipt of a letter from a friend in China, in which it is stated that a Surgeon in the English Army, stationed there, has recently discovered an effectual cure for the small-qox.

The mode of treatment is as follows: When the fever is at its height, and just before the eruption appears, the bhest is to be rubbed with Croton Oil and Tartarie Ointment. This causes the whole of the eruption to appear on that part of that body to the relief of the rest. It also secures a full and complete eruption, and thus prevents the disease from attacking the internal organs. This is said to be the established mode of treatment in the English Army in China, by general orders, and is regarded as a perfect success.

The London Lancet publishes an account of several cases of the small. pox and scarlet fever, in which the external application of carbolic acid met with marked success.

" INSECTS FIDDLING."-The chirping and singing of the cricket and grasshopper are frequently spoken of; but they do not sing-they fiddle. By rubbing wings and legs together-each in a manner peculiar to the species--these insects produce the sounds which insect instrumental performer is the " katydid." Each wing contains a little tambourine, and by the opening of the wings these are rubbed against ach other, and produce sounds of 'katy-did-she-did," which can be heard at such a long distance, and give the usect its name. These sounds are upposed to be useful in enabling insects to find their mates; or they may indulge in them for their own gratification, and to add to the general harmony of nature. A CHEAP PAINT .- Take eleven ounds of unslacked lime and one galon of boiling water, and stir into a shick pudding ; then add to it two gallons of boiled linseed oil and one quarter of a pound of white potash dissolved in one pint of boiling water. Mix boroughly, and if the oil and water do not unite, add a little more potash water, there must be enough to cut the ail perfectly but no more. It will look whicker than common paint, but will pread easily with a common paint trush, and will, wear excellently well, and has all the appearance of a superor paint, while its cost is less than balf as much. For a paint for barns, outouses, fences, &c., it is unequalled.

utes tater. FOR THE LENGTH OF THE DAY .- Add 12 hours to the time of the sun's setting, and from the sum subtract the time of rising.

WOR THE LENGTH OF THE NIGHT -Subt. .: the time of the sun's setting from 12 hou. ... to the remainder add the time of rising u. Trning

Joyful news for the Afflicted,

GATES' Life of Man Bitters.

After so much has been said and so much produced in proof of the worth and excellence of Gates's medicines is there one, can there possibly be one, who will have the hardiness to stand up in the blaze f the sun light and say they are no good, when so many hundreds who have experienced the beaufit arising from their use, would come forward and shame those. who would oppose such a boon to mankind and gladly and willingly raise their voices in extolling the virtues of these medicines, the Healing properties of which have been tested by so many of the sons and daughters of suffering humanity. I can only say for my own part, may the day soon arrive when Gates's combined and valuable medicines shall have a broader and more extensive circulation over the uni. verse, and while with the trowel in one hand and the sword in the other he is working for the good of his suffering fellow beings May there come forth those who will stand like giants against those who would overthrow and sap the very foundation of the Life of Man to carry out the prisciples of the wicked one himself when he sought to dethrone the Great Monarch of heaven and take possession of the e-spire himself. Just so with tho e who would reek to bring into disrepute and destroy Gates's medicines. They have not had skill to compound themselves, and are envicus at those who have

'I make these remarks because I have been attacked by those who carry out just such principles as I have above reterred to, and probably I shall be again assailed by them when they see my statement of the blessings 1 have received from the use of these medicines in my family, or they will probably say they would all have recovered without them. I answer, No. But stand for truth and right

But to those who have a sincere desire to Lak are these medicines really a balm to heal the sick, to such I answer they are a balm, and in every way worthy of the name they bear, namely, Gatess Life of Man Bitters

HENRY W. MARSHALL.

Mr Caleb, Gates ----Dear Sir-The Medicines I procured from you, six months ago, while suffering with a characterise them. Perhaps our best severe pain in my left side, relieved me almoust instantaneously, and at the same time effectually cured me of a distressing cough, which had troubled us for months, sicce taking your medicine I have not been troubled with either, and I feel bound to recommend it to the puble as an infalible cure for the above named disease Respectfully ;ours,

in virtue of the authority conferred by the Act Sist Victoria, Chapter 9 intituled, "An Act respecting the Customs," His Excellency has been pleased to make the following Regulations:

In addition to the Warehouse Ports mentioned in the 54th section of the Act passed during the session of the Parliament of Canada held in the 31st year of Her Majesty's reign, and intituled : " An Act respecting the Customs," and also in addition to the Ports named in the Lists sanctioned by subsequent orders in Council pas ed under the authority of the said Act, the following Port shall be, and it is hereby declared to be, included in the Lists of Warehousing Ports in the Dominion of Canada, viz ,- The Port of Wallaceburg, in the Province of Ontario.

Meat is much better for family use when at least one week old, in cold weather. The Euglish method for keeping meat for some time has great merit. Experts say, hang up a quarter of meat with the cut end up, being the reverse of the usual way, by the leg, and the juice will remain in the meat, and not run to the cut and dry up by evaporation. It is worth a trial, and when made will be continued.

What in life is more beautiful than happy human faces ?
