

The Messenger Almanac.

October.
New Moon, Oct. 6th, 5h. 44m. afternoon.
First Quarter, " 13th, 11h. 28m.
Full Moon, " 22th, 3h. 17m. morning.
Last Quarter, " 29th, 10h. 7m.

Table with columns: Day, SUN, MOON, High Tide. Rows for days 1M to 31W.

THE TIDES.—The column of the Moon's
Southing gives the time of high water at
Parrsboro, Cornwallis, Horton, Hantsport,
Windsor, Newport, and Truro.

High water at Pictou and Cape Tormentine,
2 hours and 11 minutes LATER than at
Halifax. At Annapolis, St. John, N.B.,
and Portland Maine, 3 hours and 25 min-
utes LATER, and at St. John's, Newfound-
land, 20 minutes EARLIER, than at Halifax.

FOR THE LENGTH OF THE DAY.—Add 12
hours to the time of the sun's setting, and
from the sum subtract the time of rising.

FOR THE LENGTH OF THE NIGHT.—Sub-
tract the time of the sun's setting, from
12 hours and to the remainder add the time
of rising next morning.

THE HOUSEHOLD.

CHANGING FEATHERS.—We learned
the art, says a correspondent, a few
years ago of a dear old lady, with
whom we were spending the summer.
She came into the bright sitting room
one morning with pillows and ticks,
and said she was going to change the
feathers from one into the other.

In each pillow tick she had left an
opening in the side seam about five or
six inches long, and at the top (in the
middle) one about three inches long.
Taking a pillow in her hand she shook
the feathers away from the side, and
down into the middle of the pillow,
keeping them there with several pins,
while she ripped a slit in the side just
as long as the one already in the new
one. These openings she now sewed
together—making a communication be-
tween the two.

CURRENT JELLY.—Put the currants
into a stone jar; set the jar into a ket-
tle of warm water; place it on the fire
and let it boil until the currants are
broken; do not use any water on the
currants, and keep the jar well covered
until they are boiled; as soon as they
are cool enough, strain them, a few at
a time, using a stout, coarse bag; to
each pound of juice add one pound of
granulated or powdered sugar; set
the juice on alone to boil it just twenty
minutes. While the juice is boiling,
let the sugar be heating; place it in
pie-dishes, and let it set in the oven in
a moderate heat; occasionally stir it to
keep it from burning.

LEMONS may be kept sweet and
fresh for weeks by placing them in
a clean, tight cask and covering with
water. Keep in a cool place and
change the water every other day. To
those living where it is not always con-
venient to procure fresh lemons the
above is worth remembering.

Pulverized alum will purify water,
the quantity being a large spoonful to a
hogshead of water.

Gum camphor will frighten away
mice.

SEED POTATOES.—Seed potatoes
should be selected at the time of har-
vesting. It is no wonder that our
varieties of potatoes soon run out. The
Early Rose is already depreciating in
value and no longer yields as abundantly
as formerly. Our varieties of corn
would soon run out if seed was selected
as carelessly as seed potatoes are
chosen. If the corn was all shelled
and placed in a heap and the seed corn
taken from that, we would soon see the
corn crop depreciate. But this is the
method of selecting seed potatoes. They
are all placed together when harvested
and then in the spring the number of
bushels required are taken and planted.
Supposing a man when he harvested
his potatoes should select those hills
which yielded the largest number of
fair-sized potatoes, and save therefrom
seed, does anyone suppose that what-
ever variety of potatoes he planted
would "run out"? We do not think
it would, but on the contrary would be
constantly improved.—Lewiston Jour.

SITE FOR ORCHARDS.—A south-east
slope is not the best exposure for an
orchard. The opinion seems to be grow-
ing that a northern slope is the best,
as the trees are less likely to be scalded
by the sun striking them when there is
frost upon them during the late spring.
When every thing else in the way of soil
and drainage seems to be suitable, we
think such ground may be considered
well suited for an orchard. It will be
if you form the heads of your trees very
low, in order to shade the trunks as
much as possible.—Globe.

A harmless cure for warts is to dis-
solve a penny-worth of sal ammoniac
in a gill of soft water, and wet the warts
frequently with the solution.

FOR CRACKED CEILINGS.—Whiting
mixed with glue water or calcined plas-
ter and water makes a good putty for
filling cracks in plastered ceilings.

SCIENCE.

ANCIENT EUROPE.—The London
Academy gives a description of the
ruins of a prehistoric city which have
recently been discovered in Tuscany.
The unknown city lies in the district
of Maremma, out of the line of travel,
on the upper part of Monte Leone.
The walls, which are of boulders about
three feet in length, fitted together with
rude rubble, and about twenty feet in
thickness, cover a circuit of fifteen miles.
They are about seven feet high, but
were evidently much higher originally.
They are broken at intervals, but no
gates are to be seen. They were no
doubt built for defensive purposes, and
were either the acropolis of a city or
the fortified enclosure of one. It must
have been as large as imperial Rome
itself. Owing to the density of the
forest, the remains are difficult of ex-
ploration.

MILK AND LIME-WATER are now
frequently prescribed by physicians in
cases of dyspepsia and weakness of the
stomach. Often when the functions of
digestion and assimilation have been
seriously impaired, a diet of bread, milk,
and lime-water has an excellent effect.
The way to make lime-water is simply
to procure a few lumps of unslacked
lime, put the lime in a strong jar, add
water until the lime is slacked and of
about the consistency of thin cream;
the lime settles, leaving the pure and
clear lime-water at the top. Three or
four table-spoonfuls of it may be added
to a goblet of milk.

THE CONSUMPTION OF HORSEFLESH
in Paris, begun during the reign of the
Commune, is steadily increasing. Dur-
ing the first six months of the present
year the butchers who deal in meat of
this kind killed 5288 horses, donkeys
and mules, while during the first half
of 1876 only 4422 were killed. There
are more than fifty shops devoted to
the sale of this meat.

Hundreds cured daily in Nova Scotia
BY THE
DIAMOND RHEUMATIC CURE.
Effectually curing hundreds of our Nova
Scotia citizens from that terrible malady
RHEUMATISM.

This statement is substantially a FACT
based upon evidence in the possession of
the agent, in the shape of numerous tes-
timonials from past sufferers, in the walks
of life, and particularly from some of our
most respectable and trustworthy families.

DIAMOND RHEUMATIC CURE.
In its history, this invaluable Medicine
occupies the most honourable position pos-
sible for any remedy to attain. A few
years since it was known only to the
friends and neighbors and patients of the
proprietors, and always sought for by
them whenever troubled with Rheuma-
tism, and in this way came to the notice
of physicians generally, and through their
favorable expression, and its acknow-
ledged value as a Rheumatic Remedy, the
demand for it became so frequent and in-
creased to such an extent, and soon
orders, letters of enquiry, letters of
thanks, and certificates of praise were
daily received from all sections of the
United States and Canada; and in this
way on a basis of its merit alone—unaided
by "tricks of the trade" or special ef-
forts—it has risen to its present enviable
position. Wherever introduced it has re-
ceived the most flattering preference in
the treatment of all rheumatic complaints.
In this we are really grateful and happy
not alone because our medicine finds
ready sale, and is consequently profitable
to us, do we say this, but because we open
a new field in medical science, and cure
at once what the best medical practition-
ers have for ages found so difficult even to
relieve. We fill a place heretofore unoc-
cupied. We relieve the suffering and
minister to God's poor; we restore the
laboring to the use of his injured limbs, and
save him scores of times its cost in doc-
tor's bills; we carry contentment and
gladness into the home of the afflicted,
and consequently are remembered by
millions of grateful souls.

USE
MRS. JACKSON'S LINIMENT.
FOR PAINS GENERALLY.
For sale at BROWN BRO'S, Halifax.
March 10, 1876.

Ayer's
Cherry Pectoral
For Diseases of the
Throat and Lungs,
such as Coughs, Colds,
Whooping Cough,
Bronchitis, Asthma,
and Consumption.

The reputation it has attained, in consequence
of the marvellous cures it has produced during
the last half century, is a sufficient assurance to
the public that it will continue to realize the happiest
results that can be desired. In almost every
section of country there are persons, publicly
known, who have been restored from alarming and
even desperate diseases of the lungs, by its use.
All who have tried it, acknowledge its superiority;
and where its virtues are known, no one hesitates
as to what medicine to employ to relieve the dis-
tress and suffering peculiar to pulmonary affec-
tions. CHERRY PECTORAL always affords in-
stant relief, and performs rapid cures of the
milder varieties of bronchial disorder, as well as
the more formidable diseases of the lungs.

As a safeguard to children, amid the distressing
diseases which beset the Throat and Chest of
Childhood, it is invaluable; for, by its timely use,
multitudes are rescued and restored to health.

This medicine gains friends at every trial, as
the cures it is constantly producing are too re-
markable to be forgotten. No family should be
without it, and those who have once used it
never will.

EMINENT PHYSICIANS throughout the country
prescribe it, and Clergymen often recommend it
from their knowledge of its effects.
