#### AGRICULTURE.

The Prickly Comfrey.

Considerable attention ia being lately given to the cultivation of a new plant used for fodder. The Prickly Comfrey is said to be fully equal to the cabbage or the beet for feeding to cattle or horses. It supplies a great want to agriculturists, and it appears that it may be easily cultivated in these provinces. The American Agriculturist gives the following description of the plant:-

'Prickly Comfrey is a valuable plant amount of green forage (said sometimes to exceed one hundred tons to the acre) The leaves are removed from time to time during the season. It is a native of the Caucasus Mountains, and withstands the coldest climate. Analysis shows the green leaves to contain more than 10 per cent. of nutritious matters, which is certainly a very high proportion, as much as the beet or the cabbage. It is highly commendable as a forage plant in England, and has been introduced with success in this country.

'In Virginia, plants set out in April, and growing near corn which had withered with the drought, gave at that time a supply of five to seven lbs. of fresh green fodder to the plant.

' Comfrey leaves are the first product of the soil in the early spring. It is claimed that with sets planted in the autumn, the yield per acre of the first season will be 20 tons of green leaves, of the second 50 tons, and of the third 80 to over 100 tons.

' Dr. Vœlcker's analysis gives a produce of actual nutritious matters amounting to at least 10,000 lbs per acre, for a green crop of 50 tons of the best hay, and would be fully equal to 50 tons of corn fodder.

'The leaves are greedily eaten by horses, cattle and swine.

'It will improve the yield and flavor of wilk very much.

'It is especially valuable for furnishing poultry confined in a yard, with a supply of fresh vegetable food.

' For those who have right land it is a most valuable plant, yielding an immense amount of green fodder, especially suitable for milch cows, and excellent for other domestic animals. In several of the dairy centres in Massachusetts the farmers after a trial are largely increasing their plantations, and slender, richly dressed man of forty, we hear good accounts from other named Ko-Kun-Hua. He has a wife quarters, but the most positive proof and six children with him, and has enthat the comfrey has now an established value, is in the fact that dealers have made arrangements for large supplies. One seed house of our acquaintance, that at first offered it with caution, has contracted for an immense quantity, and another, which would hardly touch it at first, has arranged for half a ton of

there is no milk secreted in the udder case, how vain it is to expect a large from the other. flow of milk where the cows have to travel all day under a hot sun, and pestered with flies, over the dry, bare pastures of this Province. The system of mers. Under that system one cow would give as much milk as three by the old method. Therefore, the supplying of a portion of the feed in prickly comfrey, say from ten to twenty pounds season, and from year to year.

#### SCIENCE.

THRIFT OF THE FRENCH WORKING CLASSES .- The most striking fact with regard to the French working classes is that nearly all are possessed of money. refer to the German-American National However little they earn they save something. Thrift is their great characteristic; in fact it is said of the French operative that they spend less in proportion to their means than any in the world. Many keep their accumulations in any old stocking secreted in their houses; others—a daily increasing number-invest in various securities, the most popular investment being the purchase of land. Every French- Place them near the fire for an hour. man, when he can, becomes the owner heritance, which cut the whole country | if possible.

up into small holdings. Savings banks with government security, building clubs, sick clubs and friendly societies are also in favor; but no money is tied up in trade unions.

THE ATMOSPHERE IN EGYPT it would seem has much to do with the preservation of the ruins for which that region is particularly noted:

It is feared that the atmosphere of London will soon damage the surface of Cleopatra's Needle. The Luxor obelisk, erected in the Place de la Concorde in Paris in 1836, is some 3,400 years old, having stood with another still larger one before the great temple for soiling cattle, yielding an enormous of Thebes. The stone is syenite granite of a brownish red color. Thirty-six years of exposure to the atmosphere of Paris has affected the stone more than the same number of centuries' exposure to the purer air of Egypt.

> VOCAL GYMNASTICS .- The common belief that frequent and prolonged use of the voice in singing is injurious to the health would appear to depend on the investigations of a Russian scientist, as reported in a St. Petersburg medical journal. The examinations included 222 singers, whose ages ranged from nine to fifty-three years, and were made with reference to size, chest circumference and breathing capacity. Among the deductions drawn from these examinations, one of the most important is, that vocal training appears to exert a remarkably beneficial influence upon cases having a tendency to consumption. It was found that the circumference of of all kinds in stock. the chest is greater in vocalists than in those who are not. Indeed, for strengthing and enlarging the chest, singing is ranked above ordinary gymnastics.

Rosa Bonheur has presented to the Spanish Government a life-size painting of a lion, and the picture is to be placed in the Madrid Gallery, despite the rule prohibiting the exhibition of the works of living artists. This is a high compliment, certainly, to the genius of the French painter.

The students of Dartmouth College exercise their muscles by laying out the College park in drives and walks, and providing rustic decorations. Better than hazing or fighting the Faculty.

Harvard has a Chinese Professor—a gaged to teach Mandarin Chinese for three years at \$200 a month.

#### THE HOUSEHOLD.

The Japanese, who ought to know how to cook rice, put only enough water in to prevent the rice from burning to the bottom of the pot, which is closely One of our exchanges remarks in covered. The rice is steamed rather than boiled, untillit is nearly done; then "The highest authorities state that the cover of the pot is taken off, the surplus steam and moisture are allowed of the cow, except when she is rumi- to escape, and the rice turns out a mass nating or at rest. And if this be the of snow-white kernels each separate

CHEAP PAINT FOR FARM BUILDINGS. -The following is a very cheap and excellent paint for farm buildings, formsoiling milch cows must soon be adopt- ing a hard surface, and, as its hardness ed by all our intelligent, go-a-head far- increases by time, it is far more durable than paint: Take freshly burned unslacked lime and reduce it to powder. To one peck or one bushel of this add the same quantity of fine white sand or fine coal ashes, and twice as much night and morning, would give the far- fresh wood ashes, all these being sifted mers most profitable returns. The past through a fine sieve. They should WORLD. This book has no equal as then be thoroughly mixed together Hymn and Tune Book discovered will give the same amount of as much common linseed oil as will make the whole thin enough to work freely with a painter's brush. This will to the strength of the binding. make a paint of light gray stone color : nearly white. To make it fawn or drab add yellow ocher and Indian red; if drab is desired add burnt amber, Indian red and a little black; if dark stone color, add lampblack, or if brown stone, then add Spanish brown. All these colors should, of course, be first mixed in oil and then added. This paint is very much cheaper than common oil paint. It is equally well suited to wood, brick or stone. It is better to apply it in two coats-the first thin the second thick .- Farmer's House Journal.

FOR SQUEAKING BOOTS .- Oil the soles thoroughly with tanners' oil. then repeat the operation until they of the house in which he lives. Of will not retain more oil. The next course he is greatly aided in this by day rub off all oil, and wear them for the French land laws and laws of in- the first time out of doors, in the dust,
