THE TELEPHOTE.—The magician of olden time professed to afford to the knight, when far away from home a glimpse of the lady of his love. After many incantations, dimly he fancied he saw her in some mirror sur- rounded by her maidens and sadly feel- ing his absence. The magician of to- day is the electrician. A few years ago, by means of the telephone, he showed how we might hear the voice of those who were at a distance. Now, if report can be relied upon, there is a discovery of a greater marvel still—we are not only to have an instrument to enable us to hear the voice, but one to enable us to catch a glance at the face of those who are far away. It is assuredly not very conceivable how this can be done. But electricity suggests the possibility of seeing by the same agency. We learn that Pro- fessor Graham Bell has sent in a sealed packet to the Franklyn Institute of America, which is a Society correspond- ing to the Royal Society of Great Brit- ain, containing the description of an in- strument or apparatus for conveying light by electricity. There are a num- ber of guesses how it is done, but none are very satisfactory. The endeavour to accomplish such a result has for some	The way to cook green-peas is to boil them quickly, and with just as little water as you can. A good way is to cook peas with lettuce, then you don't want any water. Line the pot with the leaves, put in one leek, and then the peas; cover close and steam them. Season with butter and saltponly. A pound and a quarter of oatmeal will supply as much nitrogen and almost as much fat to the body as one pound of uncooked meat of ordinary quality. A man gets three times as much nour- ishment, at the same cost, in oatmeal as he does in meats. One pound and a half of Indian meal is equal to one pound of uncooked meat in nitrogen, and surpasses it in fat. section of country there are persons; publicly space.-London Freeman. known, who have been restored from alarming and even desperate diseases of the lungs, by its use. All who have tried it, acknowledge its superiority; and where its virtues are known, no one hesitates as to what medicine to employ to relieve the distress and suffering peculiar to pulmonary affections. CHERRY PECTORAL always affords instant relief, and performs rapid cures of the milder varieties of bronchial disorder, as well as the more formidable diseases of the lungs. As a safeguard to children, amid the distressing diseases which beset the Throat and Chest of Childhood, it is invaluable; for, by its timely use, multitudes are rescued and restored to health. This medicine gains friends at every trial, as the cures it is constantly producing are too remarkable to be forgotten. No family should be without it, and those who have once used it never will. Eminent Physicians throughout the country prescribe it, and Clergymen often recommend it

ed to have accomplished the trans-

VEAL STUFFING .- Take two ounces of ham or lean bacon, one quarter of a pound of suet, the rind of a half a lemon one teaspoonful of minced sweet herbs; salt, cayenne, and pounded mace to taste; six ounces of bread crumbs, two eggs. Shred the ham or bacon, chop the suet, lemon peel, and herbs, taking particular care that all be very finely minced; add a seasoning to taste of salt, cayenne, and mace, and blend all thoroughly together with the bread crumbs before wetting. Now beat and strain the eggs, work these up with the other ingredients; and the forcemeat will be ready for use.

When this is made into balls, fry to a nice brown in boiling lard, or put them on a tin and bake for half an hour in a moderate oven. No one flavour should predominate greatly, and the forcemeat should be sufficiently firm to cut with a knife and yet not dry and heavy.
