AGRICULTURE.

DRY EARTH AS AN ABSORBENT .-- I one will observe when the cows choose to lie down in the yard or pasture, it will be seen that they choose the bare ground, rather than the sod or bedding of straw. The same is true of sheep. We have taken this bint, and furnished the cow stables with dry earth bedding. Leaves and straw are poor absorbents in comparison. In the pig-pens dry earth has no equal. In very cold weather we add straw or leaves, but until the weather is very cold the animals will be more comfortable with a bed of fresh soil, or of soil changed once a fortnight or week. In the chicken house we have learned its great value as a deodorizer. Our roosts are over a sloping floor, on which we occasionally scatter dry earth. This is turned over with a shovel each week or oftener, and we can say the chicken house is free from any offensive odor, and the bright combs and glossy feathers tell of the health of the fowls. Dry earth is a good preventive, too, of vermin on If we consider the use of milk in inon cattle, pigs and poultry. It must be procured in a dry time, and stored under sheds or in the stables. It not only bibes little by little the natural food promotes neatness and health but saves the very elements of the manures which make them most valuable, and most of Parreboro, Cornwallis, Horton, Hantsport, which would evaporate if not absorbed by the dry earth. We do not like it as a bedding in the horse stables, but it should be found in every stable, to sprinkle the floors with, as soon as the bedding is removed in the morning.

This is the era of colossal enterprises. Another illustration of that fact is furnished in the purchase by a Philadelphia company of four million acres of to burden the stomach, and to cause tract the time of the sun's setting, from land in Florida, or about one-eighth of discomfort and prolonged indigestion, and the whole State. The land is reported | this, for the obvious reason that there to be excellent, and finely adapted to is insufficient digestive agency to disthe production of all the tropical fruits, pose of it. And, the better the quality besides vegetables of every variety. of the milk, the more severe the discom-The company has for its aim nothing fort will be under these conditions. less than the recovery, cultivation and settlement of what is now a vast tract of waste land, and in this aim will have general well wishes for complete suc-

SCIENCE.

This wholesome dinner for both children renders the system less susceptible to and adults. - Dr. DYCE DUCKWORTH, disturbances caused by the motion of in Popular Science Monthly for Authe ship. Sea-sickness is a nervous gust. disorder, mainly of the brain and spinal cord. It is produced by a series of mild concussions, and induces, by sympathy, disorder of the stomach. The same effect may be produced, generally in a less degree, by riding backwards in the cars.

A Georgia paper reports the finding in that State of an amethyst bearing a drop of water in a cavity near the centre of the stone. Such water-filled cavities are not uncommon in crystals of quartz and other minerals, but this is having one.

TURNING POTATOES INTO CHEESE. A foreign paper says that cheese is made from potatoes in Thuringia and Saxony in the manner below. Possibly the process may be found worth trying, if not profitable in this country. After having collected a quantity of potatoes of good quality, giving the preference to a large white kind, they are boiled in a cauldron, and after becoming cool they are peeled and reduced to a pulp, either by means of a grater or mortar. To five pounds of this pulp, which ought to be as equal as possible, is added one pound of sour milk and the necessary quantity of salt. The whole is kneaded together and the mixture covered up and allowed to lie for three or four days, according to the season. At the end of this time, it is kneaded anew, and the cheeses are placed in little baskets, when the superfluous moisture escapes. They are then al- of pulverized or granulated sugar, and lowed to dry in the shade, and placed half a cup of water, and stir until it in layers in large vessels, where they boils. Then add the white of one egg, must remain for fifteen days. The older | beaten to a stiff froth; heat to scalding; these cheeses are, the more their quality remove from the fire and continue the HALIFAX PHOTOGRAPHIC COM. improves. Three kinds are made. stirring until it is nearly cold. (The Manufacturers. Cheapest in the Market. The first and most common is made cooling can be hastened by putting the as detailed above; the second with sauce pan into cold water.) Spread it four parts of potatoes and two parts of over the cake while it is still warm, and curdled milk; the third with two parts it will form a nice coating. It is also

milk. These cheeses have this advantage over other kinds, that they do not engender worms, and keep fresh for a number of years, provided they are placed in a dry situation and in wellclosed vessels.-New England Far-

Respecting Comets, the N. Y. Examiner remarks, that the freaks of comets have as yet beffled all astronomers, who are unusually frank to confess their ignorance. The latest eccentricity of the present comet, which is generally called the Unknown of 1881, was the splitting ofeits nuclei into two distinct and separate parts, which appear to be travelling along in the same direction, though with a distance of some 8,000 miles between them.

HEALTH HINTS.

HOW MILK SHOULD BE TAKEN .-Milk is a food that should not be taken in copious draughts like heer, or other fluids, which differ from it chemically. fancy, the physiological ingestion, that is, of it, we find the sucking babe improvided for it. Each small mouthful is secured by effort, and slowly presented to the gastric mucous surface for the primal digestive stages. It is thus regularly and gradually reduced to curd, and the stomach is not oppressed with a lump of half-coagulated milk. The same principle should be regarded in the case of the adult. Milk should be slowly taken in mouthfuls, at short intervals, and thus it is rightly dealt with by the gastric juice. If milk be taken after other food, it is almost sure

Milk is insufficiently used in making simple puddings of such farinaceous food as rice, tapioca, and sago. Distaste for these is engendered very often, believe, because the milk is stinted in making them, or poor, skimmed milk is used. Abundance of new milk should be employed, and more milk, or cream, should be added when they are taken,

RELATION OF FOUL AIR TO CON-SUMPTION .- " Experiment has shown that if an animal be confined in a narrow closed apartment, so that the air supplied is always more or less vitiated by the carbonic acid which it expires, however well fed that animal may be, tubercle (consumption) will be developed in about three months." It this be the case, a large percentage of consumption should be met with among the inmates of badly ventilated schools. But, fortunately, the said to be the first amethyst discovered disease is comparatively infrequent under the age of fifteen, and added to this is the protecting influence of the active exercise in the open air usually indulged in by school-children. It is upon the teachers that its blighting effects are most apparent, as they are predisposed by age, they neglect exercise in the open air, and their mental labour is severe, and worry of mind exhausting. Of eleven teachers who died during the last eight years within the limits of one county in Pennsylvania, two died of acute disease, one of an overdose of an habitual narcotic, and of nine attacked by consumption, eight died-six ladies and one gentleman; the other, a gentleman, will recover, at least for a time. - From Schoolroom-Ventilation," by Dr. P J. HIGGINS, in Popular Science Monthly for August.

A COOKED ICING-GOOD AND ECO-NOMICAL.—Put in a sauce-pan one cup of potatoes and four parts of cow or ewe good to use between layers of cake.

For it is sadly too true that thousands of children are STARVED TO DEATH every year by improper or insufficient food. Remember,

RIDGE'S FOOD

INFANTS AND INVALIDS.

Is all and a great deal more than we have claimed for it. It is simply a HIGHLY NUTRITIOUS and easily assimilated FOOD, grateful to the most delicate and irritable stomach, and especially adapted for the INFANT and GROWING CHILD.

Invalids, Nursing Mothers, and those suffering from Indigestion will find on trial that RIDGE'S FOOD FOR INFANTS AND INVALIDS, is all they can desire. It is carefully put up in four sizes.

Constant users will find our No. 4 size (always the most economical size to buy) now much larger than formerly, thus materially lessening the expense.

KIDDER'S PASTILLES. Price 35 cts. by mail. Feb. 25.

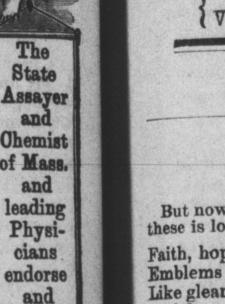

EGETABLE Has been in constant

use by the public for over twenty years,

and is the best preparation ever invented for RESTOR-ING GRAY HAIR TO ITS YOUTHFUL COLOR AND LIFE.

It supplies the natural food and color to the hair glands without staining the skin. It will increase and thicken the growth of the hair, prevent its blanching and falling off, and thus AVERT BALDNESS.

It cures Itching, Eruptions and Dandruff. As a HAIR DRESSING it is very desirable, giving the hair a silken softness which all admire. It keeps the head clean, sweet and healthy.
