SCIENCE.

RAIN.-Among the last inventions kin. reported from Australia is a machine for producing rain storms. It is inthe residents of that colony.

crystal weighing several pounds, be- entirely destroys the rich fruit flavor sides others two or three inches in length and weighing from 11 to 18 ounces avoirdupois.

FOR MENDING LAMP TOPS.—Use a cement prepared by boiling 3 parts of resin and one of caustic soda in 5 of water. This composition forms a soap, which when mixed with half its weight of plaster of Paris sets firmly in about threequarters of an hour. It is said to be of great adhesive power, not permeable by kerosene, a low conductor of heat, and but superficially attacked by hot water.

THE SMARTEST OLD MAN IN THE COUNTRY. - Seth Cook, of Rathboneville, N. Y., will be 103 years old if he lives until Jan. 10, 1885. On Oct. 16, he went alone to Cowanesque Valley, expecting to meet his son. When he arrived there, he learned that his son was at Gaines. There would be no train for that place until night. Centenarian Cook concluded it would be a waste of time to wait for it, and set out for Gaines on foot. The distance is seventeen miles. He walked the entire distance in six hours, arriving at his son's in good condition, and an hour ahead of the train.

ARTIFICIAL SEA AIR .- Many, indeed, are the luxuries that the magican's wand of invention now brings into the midst of our homes. As an instance, to produce a sea atmosphere for the sick room, foreign contemporary suggests the use of a solution of peroxide of hydrogen (10 volumes strength) containing 1 per cent of ozonic ether iodine to saturation, and 2.50 per cent of sea salt. The solution placed in a steam or hand spray diffuser can be distributed in the finest spray in the sick room at the rate of 2 fluid ouncos in a quarter of an hour. It communicates a pleasant sea odor, and is probably the best purifier of the air of the sick room ever used. It is a powerful disinfectant, the same author writes, as well as deodorizer, acting briskly on ozonized test solutions aud papers. It might be well to test the subject in some ward of one of our hospitals.

HOUSEHOLD.

DRYING PUMPKINS. - Pumpkins may be put up in the old fashioned mode of cutting them into rings, parting and drying upon poles: or they may be cut up into small pieces and dried on plates in the sun and oven. A better plan, however, is to pare, stew and strain them, just as if for pies; then spread the pulp on earthen dishes and dry quickly in the hot sun or partially heated oven. If dried slowly there is danger of souring. Store in a dry room. Kept in this manner, they retain much of the freshness and flavor of newly gathered fruit. The dried pulp should be soaked in milk a few hours before using. In making pies they are greatly improved by stirring the pumpkins in scalding milk, especially if eggs be not used; town Telegraph.

in a not colander to free them from fat, and send to table in a deep A MACHINE FOR PRODUCING dish—uncovered—lined with a nap-

CANNING FOR WINTER.-Whattended to force a rain supply from ever is to be canned, whether fruit the clouds during a period of or vegetables, must be cooked suffi- the ash of the apple tree, which has 71 drought. The apparatus is in the ciently to be eaten, and must be form of a balloon with a charge of boiling at the time it is put in the dynamite attached underneath it. jar. Stand the jar in an empty pan The balloon is to be sent into the (so it can be easily moved when clouds, and when there the dynamite hot) near the kettle that contains is to be fired by a wire connecting the fruit. Dip a large towel into it with the earth. A trial of this hot water, and wind it around the novel contrivance is to be given upon jar. After the jar is filled with the dry districts of New South fruit, thrust a knife to the bottom Wales and the result is looked for- and by stirring it around, the air ward to with interest by some of bubbles will rise to the top. Have the jar full, and seal quickly.

Some remarkable specimens of depend on the acid in the fruit. topaz have recently been found in Some fruit is so sour that pound for New South Wales. Among them pound is necessary, but where there is part of a large bluish-green is little acid in truit, so much sugar

> Preserves and jellies should be kept secluded from the air, and in a dry place. They should not be placed so that the jars and glasses will come in contact with damp walls, as they imbibe the moisture, both in dampness and taste.-Conntry Gentleman.

FARM AND GARDEN.

Ensilage in Britain.—Silos, says the North British Agriculturist, are now to be found in almost every are not only more numerous than in ductive. any former year, but generally larger in size, most of the old experimenters having considerably extended the operations. The results of the interest, and will go a long way in determining the extent to which farmers may expect benefit from the silo. Upon ensilage many people look as a medium through which farmers' dependencies upon good scasons will be lessened, their expenses curtailed, and the profits increased. Its success will effect a saving both of labor and expense, by diminishing the extent of land devoted to the cultivation of turnips; while it would empower farmers to turn to good account much of their cereal crops which are often to some extent rendered useless for malting milling, or grinding purposes, by un seasonable weather during harvest. Late seasons, too, will be less hurtful to farmers. Cereal crops that are not likely to mature can be turned into silo, wet or dry, and thus preserved in a green and nutritive state for feeding purposes during the following winter and spring. It has already been abundantly proved that fodder ensiled in a saturated condition is equally as good when taken out as that filled in a dry state. The fodder chiefly used in Scotland this year is tares, meadow, and other grass, and the pressure supplied mainly by dead weights. In England some extensive tests are being made in the preservation of maize. Mr. Wood, of Morton who has taken an active part in ensilrge pursuits, has tried maize two successive years with satisfactory results; the first year the maize when put into the silo was wet and cold, and the second year hot and dry.

TURNIPS AS WEED DESTROYERS,-When a turnip or rutabaga crop is well cared for while young, it ing to see me on important business.' quickly shades the ground so as to smother the annual weeds which are such pests in small grain and stubble. While the weather is hot and dry, the turnips have a struggle for existence against the fly, but so soon as Fall rains come their leaves expand and a thin seeding will leave few vacancies. It is comparatively little trouble to grow turnips on mellow land not too weedy; but they exhaust the soil more than other root crops, of phosphate of lime, which it is well known is a specific manure for this crop.

Keep axles or wheeling implebut without eggs they fall far short | ments well oiled. A dollar expended of the ture "pumkin pie." - German- in painting the wood work with crude petroleum or red lead and oil will save ten. When tires shrink Potato CHIPS .- Peel and slice loose, suspend the wheel in a shalround, some fine potatoes. Lay in low trough of boiling hot linseed cold water for 1 hour. Dry by laying oil, turn slowly and soak thoroughly them upon a dry towel and pressing and they will remain tight for years. with another. Fry in salted lard, When not in use keep all implements quickly to a delicate brown. Take under cover, and oil plough-shares and will certainly disown and refuse it out as soon as done; shake briskly with clarified oil to prevent rust.

LIME AS A FERTILIZER.—Lime is a fertilizer that is adapted to all soils and all crops, for all plants contain a large proportion of lime in their ashes. It cannot be compared with other fertilizers because no other fertilizer can be substituted for it. Wood ashes contain about 40 per cent of lime; some—as per cent of lime in it -contain more than 40 per cent. In your case it would be much better to use the cheap ashes instead of the dear lime. The beneficial effect of leached ashes is no doubt, due to the lime they contain, as the potash has been nearly all dissolved out from them. Where lime is cheap and ashes are dear, it is advisable to use the former. It is always the same as regards its fertilizing properties excepting as it gets old; after having been slacked a long time, it is less soluble and less active. It cannot be used without slak-The amount of sugar used should ing, as it will slake of itself when exposed to air, from which it absorbs onethird of its weight of moisture, and then it falls into a dry fine dust. It is then in the best condition for spreading and quickly dissolves. Lime is useful on all soils, even those filled with limestone; but mostly on organic, or vegetable soil, which it decomposes rapidly and this action is one of its valuable effects as a fertilizer.

APPLE TREES BY KOADSIDES .-Those farmers who planted their roadsides with apple trees fifteen or twenty years ago are now reaping a rich reward, the increased crop on such trees often making the roadside the most profitable land on the farm in proportion to the ground occupied. On much travelled highways the droppings of horses and cattle are washed into low places on the roadside, and there apple part of the British Islands. They trees are almost uniformly very pro-

VARIETIES.

A correspondent of the Spectator is responsible for the statement that the following epitaph can be found in a churchyard at Portland, Oregon :-

"Beneath this stone our baby lies, It neither cries nor hollers, It lived but one and twenty days, And cost us forty dollars."

A lady in Toronto got to laughing over some amusing incident that she couldn't stop. Finally, a doctor was called in, and he couldn't quiet her As a last resort some one had to tell her that her back hair was coming down .-Lowell Citizen.

It is Byrant who says in his beautiful poem on "Autumn,"-

The south-wind searches for the flowers whose fragrance late he bore, And sighs to find them in the wood and by the stream no more.

The dentist, love, makes teeth of bone. For those whom fate has left without; And makes provisions for his own By pulling other people's out!'

What do you do when people come in and bore?' a warm personal friend asked of a merchant.

When they stay too long the office boy, who is very b ight and knows just when to interfere, tells me that a gentleman is in the counting room wait-

Ha! Ha! That's a capital way to get rid of bores who don't know-Just then the boy opened the door

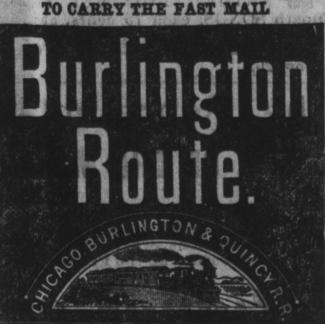

and sang out : Gent in the counting room waiting to see you on important business.'

The word was hops, but not being plainly written, the compositor read is boys and set his types accordingly. As a bit of news it lost nothing by the mistake. This is the way it read in print: The crop of boys is plentiful and of good quality.'

Lemon juice has this property, that what is written in it can be read in water quite as well as by fire, and when the paper is dried the writing disappears again till it is steeped afresh, or again held to the fire. But anything written with orange juice is at once washed out by water and cannot be read at all in that way; if held to the fire, though the characters are thus made to appear, they will not disappear; so that a letter of this sort once read can never be delivered to any one as if it had never been read. The party will see at once that it has been read, if it should contain anything dangerous.

THE LINE SELECTED BY THE U. S. GOV'T

GOING WEST. ONLY LINE RUNNING TWO THROUGH TRAINS DAILY FROM CHICAGO, PEORIA & ST. LOUIS. Through the Heart of the Continent by way of Pacific Junction or Omaha to

IT IS TRUE!

KIND WORDS. WHAT OTHERS THINK OF BUDS AND BLOSSOMS -The following is from The Christian at Work, a first-class religious weekly, published in New York: " In the City of Halifax, Nova Scotia, is published a monthly magazine called Burs AND BLOSSOMS and edited by J. F. Avery Each number contains forty pages. plentifully and handsomely illustrated, and at 75 cents a year is certainly one of the cheapest publica-tions extant. But better still, it is one of the best. Its pages are full of the gospel spirit, excellent temperance sketches, missionary intelligence, short stories, household hints and suggestions, all entertaining clean and wholesome literature, suitable for the home and family circle, and calculated to promote purity and knowledge among its readers. We do not know what the circulation of this excellent publication may be, but of this we are sure, it ought to be double whatever it is, for it is just the right kind of reading to be put into the hands of young folks; bright, cheery, hopeful and strong, without cant or sickly sentimentality. We hold it as an indisputable truism that when an opportunity offers to promote the circulation of such literature among the young it becomes a religious duty to do so. Send to the publisher for a specimen copy, and you'll find that we have not said onehalf the good things we might concerning it."

SPECIAL OFFERIII

We will send back numbers till the end of 1884 for 50 cents, or for \$1 00 will take new names from date until end of 1885. So confident are we you will like it, we offer it for 25 cents remainder of the year. Send 6 cents for specimen and opinions of the press.

UNFERMENTED WINE,

A. W. KINNEY,

Yarmouth, N. S.

Prepared for Sacramental and Dietetio

By F. WRIGHT, Maunfacturing Chemist

Kensington High Street, London, W. "This WINE is guaranteed to be the uice of the finest grapes of the Cote d'or, Andalusia, and the Medoc. It is perfectly free from Alcohol, and is guaranteed to be Pure Grape Juice. It has stood the test of 22 years' continuous sale in every climate, and is now used in upwards of 1500 Churches of all denominations. The mode of manufacture is a slight modification of a wellknown ancient practice, and effectually pre-serves the grateful flavor and the rich nutri tious qualities unimpaired. It is therefor admirably adapted in cases of debility and fever, in which the stomach is too weak to digest other food. Children suffering from febrile ailments drink it with avidity, even

when all other food has been refused. JOHN M. HODGES, ESQ., M. D., F. C.S., Public Analyst for Antrim County and Belfast

"I have chemically examined the bottle of Wright's Unfermented Wine (taken by my son from the stock held by Mr. Wright's Belfast Agent), and find that it is free from alcohol, and contains the constitutents of grape juice. When mixed with water it will prove an agreeable beverage."

FROM REV. JOHN BURWASH, Formerly Professor at Mount Allison, Wesleyan College, Sackville, N. B.

Sackville, May 23rd, 1882. "I have just finished the analysis of the Wine sent. It is necessarily a slow process, some of the steeps taking two days. This Wine contains No Alcohol, nor any dele terious ingredient. * * * It can be relied on as wholesome, not having any intoxicating properties. * * *
