is indeed the case assuming the blocd | FUND. gained to be pure and rich. If then blood can be made, the blood supply may be increased in quantity and quality which would mean an iscrease of physicial vitality and strength. Then comes the question. How is blood made? And the answer to that question is that it is made from the food we est. It is the function of the stomach and the organs of digestion and nutrition to extract from the food the pabulum, the nutritive elements of ford which sustain the physicial strength. Now when there is disease of the stomach and digestive and nutritive trac s, the nutration contained in food is imperfectly extracted. There is an increase in residuum or waste and a decrease of ailment or nutritive substance, the loss of which goes to swell the bulk of the residuum or waste. There is then a steady loss of nutrition by the b dy which means weakness. But this is rot all. Some of this waste is carried into the blood and clogs and corrupt it, making it a prepared breeding ground for disease.

blood means weakness, gain of blood

means strength. And this

Dr. Pierce's Golden Medical D sbecame regular and she began to covery cures the diseases of the stogain in weight. She is now a fat, mach and allied organs of digestion and elect by ballot without nomination. healthy baby, and I think the credit nutrition and thus enriches the blood This proved a very satisfactory way. is due to Baby's Own Tablets and I with the nutrition which had before would not now be without them in been lost through disease. Beyond this when the digestion and assimila-

> enriches it, keeping it pure from poisonous substances. But more than this proven by cures of scroful us diseases.

Let it be remembered that there is no such thing as a "blood making" medicine. Blood is not made from medicine but from food properly digested and assimilated. And the reason why Dr. Pierce's Golden Medical Discovery increases the blood supply and eliminates its impurities is because it enables the perfect digestion and assimilation of food thus increas. ing the blood making material and cutting off the en rance of waste subther yet it carries off the waste accumulations which are already in the blood and are a common source of dis-
