

## Cooking School of the Air Conducted From CFNB

MISS AIDA McANN

MISS MURIEL LUTES

There may be nothing new under the sun—but here is something new out of the ether—a real, honest-to-goodness Cooking School of the Air going into Maritime homes from CFNB, Fredericton, New Brunswick, every week day morning during the month of May!

This is the first time a service such as this has been offered to Maritime home makers. The school will be on the air 15 minutes each morning from 10.00 to 10.15. It has many advantages. Any housewife, no matter how busy, can spare 15 minutes at ten o'clock in the morning. Right in her own home, she can attend this Cooking School, hear the latest news of Maritime markets, get money-saving menu suggestions and take down many tested recipes that are new and practical. At the same time, she can keep an eye on the baby, see that the kitchen stove isn't misbehaving and darn her husband's socks!

Many interesting new features will be announced as the Cooking School of the Air progresses—one of them, we are told, will be the Children's Studio Cooking School to be held at the same time, 10.00 to 10.15 on Saturday mornings.

This Cooking School of the Air is being broadcast by Miss Aida McAnn and Miss Muriel Lutes, experienced radio continuity writers and broadcasters, who are equally well at home in kitchen and in studio. Miss McAnn, whose several college degrees have not spoiled her appreciation of good

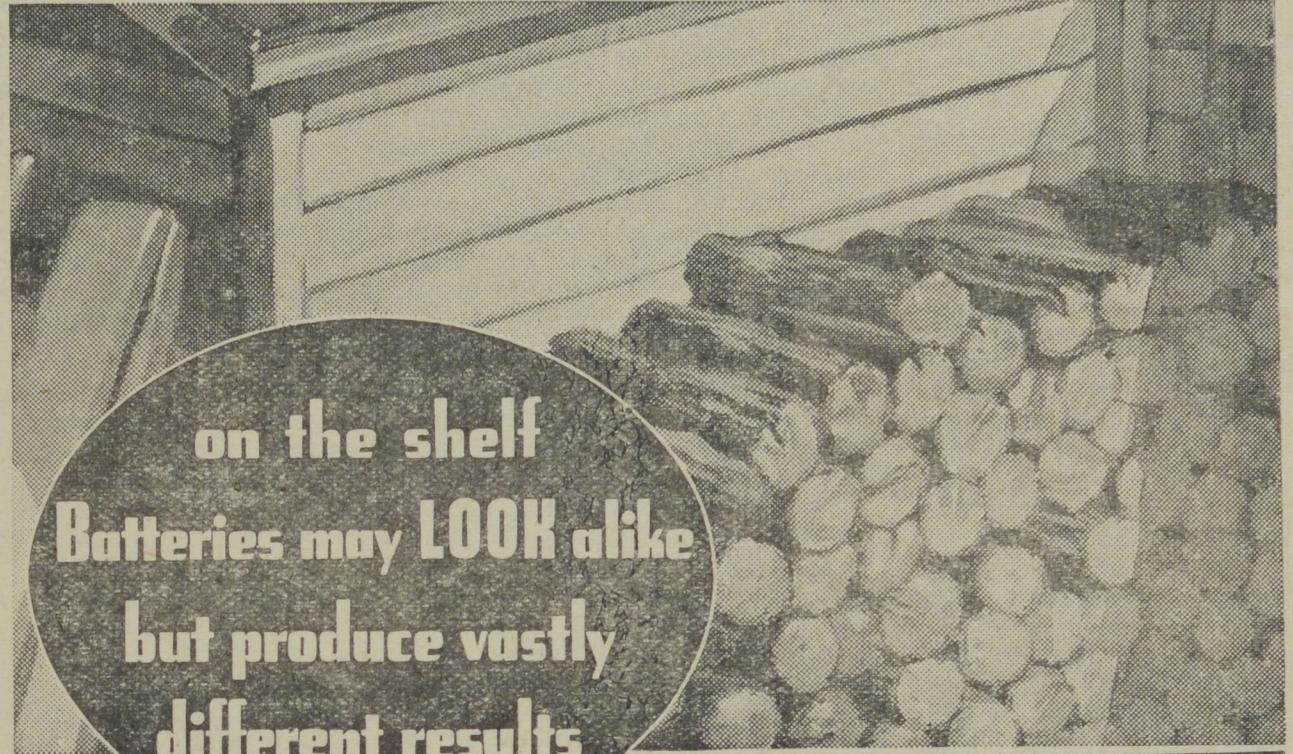

food, has a Home Economics training and has written radio continuities broadcast over the network of the National Broadcasting Company. Miss Lutes has dietetic training as well as much practical experience in cooking. She says that she mixed her first biscuits standing on a box so as to be able to reach into the mixing bowl! She has also written radio programs and broadcast them. Judging from the number of magazines that have published her articles, she writes as well as she talks! For two years, Miss Lutes has successfully operated a wayside refreshment booth where her own formulas for ice-creams, drinks and chocolate bars, made these good things to eat widely popular with tourists from all over the United States and Canada. Perhaps she may even be persuaded to divulge some of her culinary secrets over the air!

This Cooking School of the Air is an absolutely new service to Maritime women, something to look forward to every bright May morning—sun or no sun!

The strangest job in Hollywood is probably that of the "agers." These are girls who, when a production demands that the players should wear old clothes, can make a new dress look worn, torn and faded in 20 minutes. Their "art" includes rubbing a dress on a rough plaster wall, dipping it in coffee, or throwing it on the floor for passing feet to trample on it.

# Stacked outside - TWO LOGS LOOK ALIKE

but one will burn longer and produce twice the heat!

on the shelf  
Batteries may LOOK alike  
but produce vastly  
different results

THE SIZE and appearance of a battery case is NOT an accurate measure of what the battery will do for you. The quality of the materials and the workmanship of its hidden construction determine its life and dependability.

Car-owners, who have had experience with "bargain" batteries, agree that no matter how fine a battery looks on the outside, if it isn't built right INSIDE it's expensive at any price.

A dozen other brands may look about the same as a Willard. But the extra miles and months of service and unfaltering performance make Willard the choice of millions of motorists.

Your Willard dealer can give you accurate information about batteries for popular makes of cars. See him before you buy any make of battery.

## NEW!

THE MOST POWERFUL AUTOMOBILE BATTERY OF ITS SIZE EVER BUILT BY WILLARD!  
THE WILLARD "110"  
10 Outstanding Features

1. 51 Standard height plates instead of 39.
2. Highest capacity for its size—110 Ampere Hours. Means longer life and less recharging.
3. 30% greater plate area permits higher charging rates without internal damage or plate buckling.
4. Enormous reserve power for cold weather starting.
5. Special type case of genuine hard rubber—stronger than average case under impact test.
6. Delivers higher voltage at starter—results in quicker starts—less battery drain—longer life.
7. Especially designed for auto-radio installations—high capacity provides extra power for the radio as well as the starter.
8. More emergency power. Will deliver 300 amperes at zero for 4.1 minutes. S. A. E. minimum specifications require 2.2 minutes.
9. Fits nearly all popular makes of cars and is priced surprisingly low.
10. Carries a two year or 24,000 miles adjustment policy in passenger car service—good with any Willard Dealer in the Dominion.
