E. Forbes,

HOW WE GO TO SLEEP.

Begins at the Feet and Creeps

Up to the Brain. "Order is Heaven's first law," and the truth is manifested even in the process of going to sleep. When a man drops off to sleer his body does not do so all at once, so to speak. Some senses become dormant before others, and always in the same order. As he be-comes drowsy the eyes close and the sense of seeing is at rest. It is quickly followed by the disappearance of the sense of taste. He next loses the sense of smell, and then, after a short interval, the tympanum becomes insensible to sound, or rather the nerves which run to the brain from it, fail to arouse any sense of hearing. The last sense to leave is that of touch, and in some hypersensitive people it is hardly ever dormant. Even in their case, however, there is no discriminating power, or sense of what touched them. This sense is also the first to return upon awakening. Then hearing follows suit, after that taste, and then the eye becomes able to flash impressions back to the brain. The sense of smell, oddly enough, though it is by no means the first to go, is thel ast to come back. The same gradual loss of power is observed in the muscles and sinews as well as in the senses. Slumber begins at the feet and slowly spreads up the limbs and trunk until it reaches the brain, when unconsciousness is complete and the whole body is at rest. This is why sleep is impossible when the feet are cold.-Cincinnati Medical Journal.

FASTER STEAMSHIPS.

Their Size and Speed Have About Reached the Top Limit.

A London Magazine has been interviewing the principal builders of fast steamshps in this country on the point made by Cy Warman in a recent article to the effect that the next decade cannot possibly match the increase in ocean speed recorded in the past ten years. Sir Thomas Sutherland says: "For the noment we appear, in the Lucania and Campania, to have reached the limits of sea-going speed on long voyages. But the tendency is towards larger ships and a higher speed where such vast passenger traffic is concerned, and new materials or new application of existing appliances may come in to solve the problem which appears extremely difficult, in the meantime, because the only solution of other ships is bigger ships and bigge. achinery, and this is in the present condition of things means larger and deeper ports and docks, as they have almost reached the limits of existing accommodation n this respect."

Yarrow & Co. believe the limit in size has been almost reached for the present. They say: "The direction in which improvements in the immediate future are likely to be made are n increased working pressure, increas d revolutions of the engines, by which weight, and by the introduction of the water tube in the place of the ordinary marine boilers. All these points tend to reduce weight, and consequently speed is increased. But how far this can be carried out it is impossible to foretell."

Thornycroft & Co. say : "Some reducion will no doubt be accomplished, as higher steam pressures, water tube boilers and improved material are introduced; but the price which has to rease in speed above that at which the passage is now made is almost prohibitive."

ICE AND GAS.

A Combination Plant for the Production of Light as Well as Ice. A very novel combination of interests

is now being consummated in some of the Western cities in the union of plants built for the production of light with plants for the manufacture of ce, the same companies intending to operate the two plants as a joint en-terprise. The idea has also taken root nearer home, and the plans for gas and ice plant in a nearby city are already in an advanced state of preparation.

This new development of the artificial lee business has been brought about largely by the improvements made in the process of its manufacture, which have not only materially improved the quality of the product, but reduced its cost to a point which seems to assure a very large profit even at a price much below that possible to those who get their supply from nature's stock. Without entering into an elaborate description of the new plant for producing ar-tificial ice, it may be said briefly that instead of manufacturing it in a block, which is frozen from each of its four sides towards the centre, the ice is made by freezing to a long steel plate, from which it is detached after it is sufficiently thick, and is then cut into cakes of the right shape for convenient storage. It is claimed that the "plate" process enables the product to be made entirely free from any impurities, which, by the "can" process of freezing from the four sides of the cake, are lodged in the centre of the block. The "plate" process obviates also the necessity for raising the temperature of the water before it is frozen, and the best results so far gained by the "plate" It is necessary to draw the attention of hose concerned to the following Section of the Rules and Regulation of the Govartificial heat is demanded in supplying power for the manufacture . In the "can" process the results are said to have never exceeded seven tons of ice to a ton of coal, and the average protates a heavier ivestment in the original forms on the arrival of passenger trains to plant, but gives a higher percentage of return upon its cost when once in operation .- New York Telegram.

Would Wolk in Harmony.

Young wife (dreamily)-" How lovely it would be if all things in this world trading; nor will hucksters, OR VENDORS of NEWSPAPERS, books, fruit, flowers, confectionery, and other such articles, be stance, if the coal would only go up and to enter the stations, or come upon the York Weekly.

Would Like to Marry a Count.

"I wish I could marry a count," said a girl who had been reading about Anna Gould's wedding. "You have plenty of admirers." replied her married sis-"Yes, I know," she admitted, with a little sigh, "a countless number."— Pittsburg Chronicle-Telegraph.

NECESSARY PUBLICITY.

VALUE OF GOOD ADVERTISING.

The Newspaper the Only Natural Medium of Bus= iness=Bringing

Advertising is business. If it wasn't business, it wouldn't

be a part of business The man who cannot utilize advertising in his business has no business to be in business, and general-

When six hundred thousand successful business men have advertised, do advertise, and intend to advertise, we will not talk to the man who dosen't believe in advertising, and who is stagnating in his own folly, attempting to believe that he is the exception which proves the rule. Supposing he is, what man of sense dares tollow the rule of exception, when immutable laws of success demands necessary publicity? Make up statistics for yourself. How many successful men in your town or city do business without advertising? Will you be with the successful majority, or fn the risky minority?

Does advertising pay? Read the answer in the success or the six hundred thousand business men who know that advertising

There is annually expended in America one hundred and fifty million dollars in advertising of all classes, the bulk of this money going into regular periodicals, and daily and weekly newspapers. The daily and weekly newspapers. The powers; by the adoption of lighter and stronger materials, thereby saving magazines and other national publications, has no place in this city, for local business men, who obtain the bulk of their business from the city in which they do business, and from within a radius of not exceeding one hundred miles, the great proportion coming from not exceedng ten miles.

Business has suffered from busin ness depression, but no business depression ever exceeded heyond its epidemic limit, and every depression has been followed by better times, all the more brisk from their contrast with preceeding months.

The most successful business men prove, by liberal expenditure, that there never have been times so dull that extra advertising did not The foolish business man cuts his publicity appropriation when business appears to be poor, and allows the neighbor in business to cut into his old customers, and

keep new ones away from him One has only to judge folks by himself to be convinced that few people buy anything, beyond perishable necessities, without due consideration. A woman seldom buys a hat, a cloak, or any other article for her own use, or for the children, except when the matter has been thoroughly reflected upon, and

the market investigated. While men are quicker buyers, most of them think before they buy, and as the majority of men, so far as buying is concerned, are under the direct domination of wife, mother, sister, or some other woman' we cannot be far out of the way in saying hat most goods are purchased with two or three weeks consid-

If the times have been hard, or are hard, they will buy almost as much, but they will buy necessities and fewer fancy luxuries, when it times are particularly good, they will buy foolish luxuries instead of so many necessities. The times regulate the class of their buying. Ninety per cent. of the people

don't know what to buy. The majority of people are like sheep. They can be led by real or presumed argument. Many a wo-

man who intends to give a poor relative an oil stove can be made to buy a first class cooking range. Many a father thinking of presentng his son with a bicycle or sled, can be made, with proper advertisements, to purchase a good bicycle allowed in he cars, or upon the train, nor down with the thermometer."-New or sled, which is cheaper in the end, and more satisfactory all around.

If the times be particularly dull in town, it is partly your fault. You can make them lively If the advertisers in the city are slow, unliberal, the best opportunity is offered the enterprising merchant to take business away from them. Where all the merchants are progressive, then advertising is all the more progressive, then libera advertising is all the more necessary.

The advertisement should not present more than one point at a by advertising rules of other distinct divisions, which make the advertisement not a conglomeration of advertisements, but a direc

appears, if well dusted in the store, and well advertised in the newspapars. The original advertiser will convince people, who are not regular to the convince people to the convince people, who are not regular to the convince people to the convince peop ar clinome

IKUTH IKIUMPHANT!

The laws of the Medes and Persians were unalterable, but science asserts its nobility and is ever making itself more resplendent with new discoveries. Nature's great law is that of progress. From the days of Adam, with his primitive suit of fig leaves; to the present hour, the noble

TAILORING

Has been conspicuous for its splendid achievements. Gentlemen, I am cosmopolitan in my predilictions. I am prepared to make garments suited for the balmy days of summer, and also such as are fitted for the hyperborean blasts of winter. I am also in a position to make suits that will, in point of fit, show the beautiful outlines of the human body almost as well as the statute as it comes from the sculptor's chisel.

Gentlemen call at my establishment in Moncton as my fits are warranted, and my workmanship open to the keenest inspection. I have now on hand a full line English, Scotch and Canadian Tweeds, Worsted Coating, Overcoating and Farcy Trousering. Now is the time for you to call and leave your order for a summer suit or over coat.

A. Y. CLARKE,

MERCHANT TAILOR

184 Main Street, Moncton, N. B.

CHASE'S CHAPTER 1. Dr. Chase's Kidney-Liver Pills are s

combination of valuable medicines in concentrated form as prepared by the eminent Physician and Author, Dr. A. W. Chase, with a view to not only be an unfailing remedy for Kidney and Liver troubles, but also tone the Stomach and purify the Blood, at a cost that is within the reach of all. The superior merit of these pills is established beyond question by the praise of thousands who use them—one bill a dose one how at costs.

Pill a dose, one box 25 cents.

2. When there is a Pain or Ache in the Back the Kidneys are speaking of trouble that will ever increase unless relieved. We have the reliable statement of L. B Johnson, Holland Landing,

sour and belching, urine scalding, had to get up 3 or 4 times during night to urinate, com-menced taking one Kidney-Liver Pill a day; tory of distinct attractions, seperately presented.

It is remarkable now attractive can apparently unattractive article

Trouble, in such a case there is no medicine at the case the case

WOMAN'S NEED

Women suffer unspeakable tortures from muscular weakness, caused by impaired nerves and poor blood. Uric Kidney acid poison, unsuspected, weakens the nerves and poisons the blood. By and by, if the Kidneys do not properly purify the blood, then comes prolapsus, retroversion, etc. Blood 75 per cent, pure is not a nourisher—it is a death breeder Delicate women need not be told how much they would give to get and STAY well. If their blood is free from the poisonous ferments of the Kidneys and Liver, they will never know what "weakness" is. The blood is the source and sustainer of health

it cannot be kept pure except the Kidneys and Liver do and natural action of the organs, one 25 cent box of Kidney-Liver Pills

source and sustainer of health

organs, one 25 cent box of Kidney-Liver Pills will prove to any sufferer they are a boon to women, can be used with perfect confidence by those of delicate constitution.

One Kidney-Liver Pill taken weekly will effectually neutralize the formation of Uric Acid in the blood and prevent any tendency to Bright's Disease or Diabetes.

For purifying the Blood and renovating the system. especially in the Spring, one 25 cent box is equal to \$10 worth of any Sarsaparilla or Bitters known. Sold by all dealers, or by mail on receipt of price, EDMANSON, BATES & CO., 45 Lombard Street, Toronte.
