 FREDERICTON, N. B., OCT. 17, 1891.

THE FOOLS NOT ALL DEAD YET.

We learn that a movement is on foot in this neighbourhood, and lawyers have been employed by persons supposed to be interested in the recovery and division of a vast property situated in the City of New York, known as the Anneke Jans Estate, which is now and has been for a hundred years in the hands of the Trinity Church Corporation, and said to be worth \$100,000,000. If there are any fools in this city who imagine they have a claim and any chance of getting it, let them "take a fool's advice" and keep their money for lawyer's fees, in their pockets, or they will rue it. Periodically (say once in twenty years) this old story is revived, and has been kept afloat since the beginning of this century by interested lawyers, and as the contributions would run out there would be a cessation of hostilities, until such time as more fools could be gathered together to subscribe fresh funds for carrying on the war and be cheated, under the impression that as they considered themselves heirs, however remote, of Anneke Jans, the time was at hand when they would not only get their own back but millions beside. During one of these periodical fits, fifty years ago, a large gathering of these heirs' expectant held daily meetings in the City of New York, when the prospects seemed so bright and the proof of their claims so positive, that overtures were about to be made to the Vestry of Trinity Church for a compromise—that is the heirs would be willing to drop all further proceedings if the Church would hand over some twenty millions of its property. But the church having nine points of the law in its favor, viz: possession, the advances or news of the intended advances were laughed at and treated with ridicule, and thus like the big Exhibition Balloon in St. John, which would not go up, as the gas had all run out at the bottom, the whole movement burst; but the lawyers fared well. That batch of fools then dropped their pretensions, no doubt to be revived at some future time by their heirs, as soon as the cunning lawyers can get enough of them together to shell out for a fresh start. We had no idea that we had such simpletons living in the neighbourhood of Fredericton and lawyers unscrupulous enough to encourage them to organize for a new departure in the hopeless expedition. Such of them as read the FREDERICTON GLOBE will take its advice and drop the whole business and save their money.

In fact these undertakings are even worse than parties going in search of Captain Kidd's buried treasures, and goodness knows these fools are bad enough. Between Liverpool and Lunenburg, N. S. in Chester Bay, we think it is called, and near the main land are situated several islands. Companies were formed many years ago, which set to work with all the appliances for excavation, and holes were dug deep enough to take in the City Hall tower and bury it out of sight—all for the purpose or with expectation of finding Kidd's gold. Notwithstanding the disappointment in not getting what they were after in one hole, the workmen commenced fresh operations and dug another, and another—in fact honeycombed the whole of one island—and with the same results. The amount of labour and money thus wasted would have been sufficient to have built a line of battleship, and equipped her and yet other explorers in other parts of the world have been equally industrious and stupid in quest of the same object. We suppose the world was made for fools as well as wise men, and we could not do very well without them, as they help to maintain the balance of power. If it were not for the turkey buzzards the air would become putrid through animal decomposition. But the revival of this Trinity Church "hoodlum" is certainly not the "survival of the fittest" for the consideration of sensible people, whatever views the lawyers may take of it—for if fools in the case they are only fools in disguise.

THE DRAMA IN ST. JOHN.

The new Opera House in St. John is certainly a credit to its enterprising

originators, and should be liberally patronized by its inhabitants. It being a new venture any short-coming should be overlooked by those who are disposed to be captious. We notice that a portion of the St. John Press found fault with some of the actors because they did not come up to the ideal of the writers. Indeed from the night of the opening, persons have been remarking that the company was not first-class and that the actors failed in a knowledge of the conception of the characters they assumed. This may be true, and it may not, for it very frequently happens that the critic himself is at fault—thinking himself perfect he easily finds imperfection in others. When Bulwer Lytton wrote his play called "Money" its appearance upon the boards of Drury Lane announced as the work of an anonymous writer, it was hailed by the critics with the highest encomiums, as a masterpiece, the production of genius—little less than that of a Shakespeare, and that there was great fame and prosperity in store for a writer who as a poet of the most exalted merit was unquestionable. When this play had the run to crowded houses for many nights in succession, the town was taken by surprise, when one morning it was announced in the Times that Bulwer Lytton was the author. The scribes and pharisees immediately nibbled their pens to at the author in a real gladiatorial style—to annihilate him—to show that he was a dramatic nobody—declaring that their former criticisms were based upon a superficial study of the play, more in deference to and encouragement of the unknown writer, who after all may have exhibited some good points. They turned round upon Bulwer and because they did not like him, his play was a secondary matter. But the author and his friends had the laugh upon those great newspaper scribes. We do not say that the St. John writers are actuated by the same spirit, but it is not possible that their competency may be somewhat awry in their fault-finding spirit? At any rate if the Company that have been playing at the Opera House were not all they should be, and the question arises, were its members paid so high that better things were to be expected of them? You cannot expect the same from cheap as from dear people. If cheap in this case, then the management was at fault and the critics should deal with them and then only for opening a new house which cost so much money and upon which its first engagement did so much depend—in not selecting for their first series of plays a first-class company, if only for a week, and thus give the house a good send off, and establishing its reputation at the first. Had this been done and then the doors closed for a while, until more permanent arrangements could be made, there would have been no fault-finding. We think the management have made a mistake in not securing a better attraction for their opening, but we hope to see them recover the lost ground before a great while in the presentation of some sterling attraction which will warrant a generous support from the people of St. John.

SOAPY SAM.

It would appear that the Mayor of St. John has set himself up in business as a weigher of soap, for what reason we know not, unless it be in consideration of the soporific atmosphere of his Council Chamber. But more than this the soap which His Worship weighed was in the form of a baby which is indicative of the squalling times which his Council indulge in whenever they desire to alarm the citizens. The Bishop of Litchfield (Dr. Selwyn) on one occasion was present at a dinner party given by one of his parishioners. In the drawing-room, after dinner, the bishop lifted the son of his host upon his knee (a lad about five years old and very precocious) and in fondling with him the child looked up into the bishop's face and said "Bishop, why do they call you Soapy Sam." The company was astounded but the bishop immediately answered the child "because I suppose when I get into dirty water I always come out with clean hands." So we suppose the Mayor of St. John from handling so much soap, 75 pounds at a time, and that in the shape of a baby, will always see that the business of his office is likewise conducted with clean hands—baby or no baby.

For Over Fifty Years.

Mrs Winslow's Soothing Syrup has been used by millions of mothers for their children while teething. If disturbed at night and broken of your rest by a sick child suffering and crying with pain of Cutting Teeth send at once and get a bottle of "Mrs. Winslow's Soothing Syrup" for Children Teething. It will relieve the poor little sufferer immediately. Depend upon it, mothers, there is no mistake about it. It cures Diarrhoea, regulates the Stomach and Bowels, cures Wind Colic, softens the Gums and reduces Inflammation, and gives tone and energy to the whole system. "Mrs. Winslow's Soothing Syrup" for children teething is pleasant to the taste and is the prescription of one of the oldest and best female physicians and nurses in the United States. Price twenty-five cents a bottle. Sold by all druggists throughout the world. Be sure and ask for "Mrs. Winslow's Soothing Syrup."—Aug. 29—91—1y.

NOTES AND NOTIONS.

Running Comments on Passing Events.

Sundry Ebulitions in Prose and Rhyme.

How the Domestic, Social and Literary World is Wagging.

Among the 60 millions of America there are more divorcees than among the 350 millions of other Christian nations. A company has been formed in Kansas to lay mains and supply the city with cold air in summer and hot air in winter. "One-minute luncheons" for business men are being provided in New York. Customers stand before a revolving counter and help themselves to the viands as they pass, the circuit occupying one minute. A few days ago there died in a Vienna hospital, as a result of a street accident, a tramcar driver who had been for many years in the service of the company. It turns out that the deceased was Baron Erwin von Schonstein, who was formerly a millionaire, and the last member of a distinguished family.

An old lady named Martin, who has died at Vincennes, and has by will left her fortune, amounting to some \$2,000, to her native city of Toul, allocates \$45 to cover the expense of her funeral, with a direction that she is to be buried "as far as possible from the grave of her late husband."

Do Little Eat More Than Big?

Midgets have excellent appetites, as a rule. Tom Thumb ate more than Chang, the Chinese giant. Any of the little folk will eat as much dinner as a man six feet high. Giants, as a rule, have small appetites. When Chang was boarded at one of the large hotels in Chicago they thought he would eat a good deal, and so they charged him as much as if he were three men. Instead of going through the bill of fare from beginning to end and then repeating, he ate no more than the average boarder. It took three beds, however, to make one bed for him to sleep in.

A very grotesque-looking South American dwarf, who used to be exhibited as a wild man without language, who fed on raw meat, and who was incapable of understanding signs, would, after the exhibition was through every night, go over to a restaurant and order all the French dishes on the bill of fare, read a Spanish newspaper, talk French to the waiters, and ask questions of Americans in fluent English. He had an enormous appetite. He didn't weigh much, but he ate like an elephant. He used to polish off three apple dumplings for dessert.

"Forget thee?" wrote a young man to his girl—"forget thee?" When the earth forgets to revolve, when the stars forget to shine, when the rain forgets to fall, when the flowers forget to bloom—then and not till then, will I forget thee."

Three months later he was going to see another girl, with sandy hair and freckles and some thousands of pounds in the bank. "Yes, George," she said, softly, raising him from his knees, "I love you."

"And you will be mine?" he cried passionately. "Not," she murmured, casting down her eyes and blushing modestly, "not until you answer me one question."

"What is it?" "What," she whispered, as the colour fled from her rounded cheeks and her supple form trembled like a lily in the breeze, "what are your views on the Irish question?"

A Natural Washing-Tub.

The water of Mona Lake, in Nevada, is full of soda, borax and other minerals in solution. The dirtiest and grasiest of linen is made clean in half a minute by simply rinsing the article in the lake. The water lathers naturally when agitated, and during a high wind a wall of suds, three or four feet high, is seen on the shore where the waves beat. This quivering wall, in which are seen all the colors of the rainbow, would grow to a height of ten or twelve feet before toppling over, but that when it attains a certain height the wind catches it up and wafts great balls of it far inland. Some of these floating balloons of lather are as big as a four barrel.

A Cheese Census.

A Swiss scholar has been taking the census of the inhabitants of a cheese. The microscope examination of one "gramme" of a fresh Emmenthaler cheese contained no fewer than 90,000 microbes. This prodigious encampment, after 70 days, proved to have increased to a tribe of 800,000. Another sort of cheese contained within a single "gramme" board and lodging for about 2,000,000 microbes, while in a "gramme" cut from the rind of the same cheese were found about 5,000,000 of these inhabitants. A piece of cheese upon our tables, of a few pounds' weight, may consequently contain more microbe inhabitants than there are human beings in the whole world.

One day, while dining at the house of a friend, the Rev. C. H. Spurgeon was heard to say that he had lived for three months on nothing but milk. This gave rise among the company to several questions as to what prevented him from eating solid food, from what complaint he was suffering, how his strength was maintained, what sort of milk was it, and in what quantity did he take it. After everyone's curiosity was fully aroused, Mr. Spurgeon, with a twinkle of fun in his dark eyes, said, "Ask my mother, which reply was followed by roars of laughter, everyone feeling they had been taken in, the time being the three first months of his life.

She: "Oh, how delightful it would be to drift on like this for ever and ever!" He (who has hired the boat): "Not at eighteen pence an hour."

A young student lately presented himself for examination, and failed. To his family, anxious to hear of his success, he telegraphed thus:—"Examination splendid; professors enthusiastic. They wish a second in October."

"I don't meet you at Miss Sveite's any more."

"No, she and I have had a difference of opinion."

"Nothing serious, I hope!"

"Oh, no; only I thought I was the man she ought to marry and she thought I wasn't."
