fattening is retarded. Cream can be kept smooth and free from the clots due to decomposition by adding salt and

stirring frequently. The grower of good fruits is a benefactor of mankind, for he furnishes a wholesome, pal-

latable and healthy food.

cows and say that it pays better than to feed t to pigs or any other stock.

Labor is the most costly of all products and this fact is recognized in the value of the different kinds of farm stock.

The palatability of a food has much to do with its value, the animal's appetite being a pretty good guide in feeding.

Sows which produce large litters of good pigs and are careful with them had better be kept as breeders until they are old.

As with men, individual animals have varied tastes. The food must be suited to these or best results cannot be attained. There are many farmers who find it easier

to grow a good crop than to market it at the The objections to allowing young pigs to run with the fattening hogs is that they will

lay on to much fat to grow well. People who live a considerable distance from a city or shipping point are at a disadvantage

in fruit growing for market. The probability is strong that your cows would pay you well for a little extra feed now.

The pasture has past its best stage. When the hot, dry weather sets in, grass loses more or less of its nutritive value, and care must be taken to see that stock do not

With nearly or quite all stock intended for meat size is entirely a secondary consideration

provided the animal is fat smooth and trim. If the hay is stacked in the meadow, be sure the stacks are protected before stock is turned in, if the meadows are allowed to be

pastured. The proper circulation of moisture in the soil is as necessary as the circulation of the blood in the animal body, or of the juices in the plaut.

In purchasing animals to feed, it is very important to secure good, growing animals that are not difficult to keep in good, thrifty

method practiced by our English cousins, allowing no animal to be recorded unless its ancestors trace back to importations

Ask Your Friends

Who have taken Hood's Sarsaparilla what they think of it, and the replies will be positive in its favor. One has been cured of indigestion and dyspepsia another finds it indispensable for sick headache. other report remarkable cures of scorfula, salt rheum and To a very considerable extent the degree of other blood diseases, still others will tell you that it overcomes "that tired feeling" and so products raised by one farmer in comparison on. Truly the best advertising that Hood's Sarsaparilla receives is the hearty endorsement of the army of friends it has won by its positive medicinal merit.

To Dry a Cow.

The following from the New York Times is strongly flavored with common sense: "It cannot help but be injurious to a cow to milk her up to a new calving. It is exhausting to the cow and the calf both, as the calf is sup-The following description of the home ported by the cow and needs the nutriment cow, leave half the milk in the udder and continue this for a week; then milk once a feed only dry food, and if necessary, straw. cow is one of those occasional profuse milkers that cannot he dried, the milk may be fed to

> The total amount of commercial butter, secured from the 984 pounds of milk in each lot ting, and 41 pounds, 4.5 ounces for shallowpan setting; a difference of 1 pound, 9 ounces in favor of shallow setting. Of milk to make I pound of butter, it required 24.7 pounds in deep setting, and 2.38 pounds in shallow setting. The experiment as a whole brings out the following facts: 1. There was a slight gain of cream from setting milk in shallow pans over that set in deep cans. 2. There was a very considerable loss of fat in the skim milk from deep setting, over that from shallow setting, amounting to nearly twice as much. 3. The buttermilk from shallow setting contained much more fat than that from deep setting. 4. A slightly smaller amount of milk made one pound of butter, when set in shallow pans, compared with that deep set. 5. Assuming that milk was to be set in open air, other things being equal, it would be the most ecconomical to use shallow
