AGRICULTURE

Notes and Suggestions of Practical Utility

FOR THE FARM, FIELD, GARDEN AND DAIRY.

Cleanings of Interest for Our Country Readers.

Cut your hay early.
Half crops never pay.
Keep your barnyard clean.
Prepare to grow full crops.
Lots of cows are milked dry.
Cut your grass early for hay.
Education is a perpetual task.
Progress is the law of nature.
Ripe grass stalks are only straw.
"Make hay while the sun shines."
This is a selfish and grinding age.
Sell when you can get a fair price.
The old is the parent of the new.
The world can never stand still.
Virtue is too often its sole reward.
Provide shades in your pastures.
Avoid all projection in the stable
Rubbish around trees harbors mice.
See making is what exhausts the soil.
Nature works in accordance with laws.
Thomas slag is rich in phosphoric acid.
Original ideas are few and far between.
Clean, rich land is necessary for onions.
No two persons see and understand alike.
Young animals gain faster than old ones.
Animals as well as men show judgement.
Consider the inner man instead of the outer.
Land that will grow corn will grow grass.
The yield of milk varies with the weather.
Ripening the seed exhausts the grass roots.
Kale will produce an early crop of greens.
Clover seed is usually good the second year.
The pest animal does not always remain so.

As men rise their mental vision is broadened.
When the cow is chilled she shrinks her mess.
The inner as well as the outer world is in motion.
Believe something; you can't stand on nothing.
Beauty in fruit is a great point to aid in selling it.
Hard water does not make good kerosene emulsion.
A milker who pleases the cow will get the most milk.
This is an age of penuriousness and extravagance.
There is little or no nutrition in thickly sown corn.
What is instinct but a lower manifestation of intellect?
Long rows in the garden are economy in cultivation.
Man is largely made an instrument of providence.

Hot weather is favorable to the generous flow of milk.
Rub off the sprouts on trees and save cutting off limbs.
The rills of the mountains make the rivers of the valleys.
A horse properly educated is safest after seven years old.
Let your animals always have a shelter from the storm.
Fodder corn is of little value before the ear begins to form.
Most sins are due to the weakness of the understanding.
A cow chewing her cud when milked is doing her duty.
Seedtime, growth, harvest and rest is the order of nature.
Wheat harvest in Talbot county, Md., began on June 16.
The accumulated water of winter produces spring floods.
Do not let the sheep go too long without looking after them.
Long roads and heavy loads are what ruin many young horses.
Calves enjoy getting into a dark cool shed away from the flies.
A comparative vacuum in the atmosphere calls for a cyclone.

A sample of milk or cream should always be an exact average.
Keep calves in dry, clean light, well ventilated stalls or pens.
The wise man dies and the uneducated infant takes his plate.
Some day people who feed skim-milk won't skim it so close.
The consumption of fruit increases faster with the population.
Like causes produce like effects if the conditions are the same.
A woman farmer does not spend much time at the corner grocery.
In morals, the strongest attraction prevails, as it does in chemistry.

Keep weeds cut close into the ground for a while and they must die.
Never run calves out to pasture when you expect to raise good ones.
A backward spring does not always mean an unproductive summer.
The best time to kill weeds is about two days before they come up.
We judge men not by their physical formation but by their deeds.
All organizations spring from the inharmonious condition of society.
Denmark exports more than 80,000,000 pounds of butter annually.
Do not skim milk from the top, as the cream mixes with the milk.
Great accuracy in handling milk is necessary to uniformity of results.
Good cattle will pay the new settler in the West as well as anywhere else.
The hog is a grazing animal and should not be shut up in a pen in summer.

The Dairy.

Evenness of milk flow is largely governed by the food given and the care bestowed in management.
There is no room in the dairy for the person with an unkindly disposition or who is unable to rule his own spirit.
Economy in feeding a dairy demands that the cow shall be fed enough to be kept in condition to do the best work at all times.
One really good cow will furnish as much milk and butter as two ordinary cows. As it takes less to feed, stable and care for one cow than two, the wise course is apparent.
Butter will come much quicker sometimes than others, due generally to difference in temperature. Every one who has cows should have a thermometer for testing the temperature of the milk.

The results would probably vary with the seasons. In a cold, wet season, we should expect better results from feeding grain than in a hot and fairly moist season; the same in a hot and very dry season.

For scratched or cracked teats we have never found anything better than an application after each milking of a little of the poorest and cheapest molasses we could get, such as was known as sour Cuba, and mostly sold to the distillers to make rum of.

Milk soured during thunder storms is peculiarly fatal to nursing children. Milk sours during or just after a thunder storm because the atmospheric conditions then prevailing are usually of a kind favorable to the rapid development of the fungous growth that sours milk.

Belfast, Me., Jersey creamery is using the cream from about 80 cows and producing a little more than 300 pounds of butter per week. The butter is made at the farm of John W. McIntyre, who at present runs his machinery by horse power, but intends to put in a steam engine.

The county of Delaware, N. Y., is largely given over to the dairy industry and is one of the most prosperous in the state, and still it is a rough and rocky region where many a farmer would starve to death under the system of ice water and exercise for cows in winter.

This ought to be a good average season for feeding grain to cows in pasture. So far it has been neither very hot and dry nor very wet. But full and steady feeding the year round we think will be found the most profitable. This is a lesson the dairymen must sooner or later learn.

There is no economy in saving food by withholding it; at the same time there is no need nor sense in wasting food by feeding to excess so it will be mused over or wasted in any other way. True economy and the best feeding for profit are accomplished when the cow is fed all she will eat up clean.

A Wisconsin dairyman who is feeding oats and peas, sowed together last year, is reported as saying that he never had his cows do so well before. He cut the crop with his binder and from ten acres of oats and peas harvested 459 bushels. The stock ate the peas and oat straw more readily than the oat straw alone.

Illustrating the value of the corn plant to the dairyman, if wisely handled and fed, Prof. Stewart tells of a dairy farmer near him, who fed 104 cows on an acre of corn in the milk and it gave them full feed for four days, equal to 416 days for one cow. And yet there are thousands of farmers in the West never save their corn fodder because they think it "don't pay."

An Ontario farmer gives a remedy for kicking cows that he says is effectual. It is to buckle a strap as tightly as possible above the gambrel joint of the hind leg opposite the side on which the milker sits. The cow cannot then stand on that leg to kick with the other leg, and the strap also draws her attention away from the milker.

Seamless steel boats, each made of only two plates, each plate rivetted to a bulb keel bar, which forms also the stem and stern posts are being made by a firm in London.

The natural configuration of many mountains suggests the human face, and such physiognomies cut out of the rocks on a gigantic scale are commonly regarded by savages as objects of worship.

JOHN KALLOCH, Montville, Me.

THEY SAID I MUST DIE : : :

: : : BUT :

: : : I AM WELL AND HAPPY.

MR. KALLOCH SAYS:—
"I am 55 years old, and for the last 15 years, have had the worst Blood Disease known to man. To add to my misery, my Bowels became constipated, appetite ceased, and I was so reduced in flesh and strength, I could only walk by the aid of canes. An Eating Sore started on my side, and in spite of physicians and medicines, increased, until it measured 2 by 3-1/2 inches, laying sections of my Ribs bare. Dr. Klgoire, advised SKODA'S REMEDIES. One course, 6 bottles of the DISCOVERY, with the LITTLE TABLETS, using the OINTMENT and SOAP externally, perfectly healed the sore. I have gained 25 lbs. in flesh, and am a WELL MAN."

I certify to truth of above statement. I knew Kalloch's condition before treatment, saw him during treatment, and have seen him since cured.
VOLNEY B. THOMPSON, Montville, Me. Chm. Selectmen.
SKODA DISCOVERY CO., WOLFVILLE, N. S.

ANECDOTES, HAPPENINGS AND GENERAL COMMENTS

Clipped and Condensed for the Readers of The Globe.

During sea voyages all dogs lose their "game nose"

Collodian was first used in photography in 1851 by Archer.

Men on an average weigh 20 pounds more than women.

Women have abandoned spoon collecting for silver hat pins.

In 10 years the descendants of two rabbits will number 70,000,000.

Big bells are now being made from steel, not from bell metal.

If the forehead be shorter than the nose, the sign is of stupidity.

of the expenses of carriage horses, covered hacks and travelling expenses.

About 24,500,000 are spent on hunting in Great Britain and Ireland, independent

Paris has 12 more dailies than London, New York, Philadelphia and Boston combined.

One square foot of glass will lose as much heat as six square feet of 12 inch brick wall.

There are said to be but 450 words in the Chinese language, all monosyllabic.

These, with different accents and intonations are expanded into 1250 words. Each word has many different meanings some as many as 40.

A forgotten vault, containing antique tobacco pipes, has been unearthed in Staple's inn, London, while excavating for the new patent office. They bear the imprint of old pipemakers, and belong to the days of Cromwell.

Mammoth Spring, Ark., which is claimed to be the largest spring in the world, is 70 feet deep, with a diameter of nearly 200 feet. Sixty-five thousand cubic feet of water gush forth every minute, producing 1000 horse power.

Pall Mall, the famous locality in London, it is said, is so called from the fact that in earlier times it was an alley for tennis playing and took its name from the name by which the mallet was known—pell mell or pall mall.

True Philanthropy.

TO THE EDITOR:

Please inform your readers that I will mail free to all sufferers the means by which I was restored to health and manly vigor after years of suffering from Nervous Weakness. I was robbed and swindled by quacks until I nearly lost faith in mankind, but thanks to heaven, I am now well, vigorous and strong. I have nothing to sell and no scheme to extort money from anyone whosoever, but being desirous to make this certain cure known to all, I will send free and confidential to anyone full particulars of just how I was cured. Address with stamps:
MR. EDWARD MARTIN (Teacher), P. O. Box 143, Detroit Mich. May 20—4m.
