test of her value in the dairy.

with the selling price of butter.

Test the cows in the dairy herd. Some of them are not paying for their keep and should be disposed of.

The cow responds to comfortable surroundings, good feed and gentle treatment by an increased flow of milk.

The cow that stops chewing the cud and pricks up her ears when being milked cannot be depended upon to give all of her milk. Have good cows and then keep them milk-

ing as long as possible each year. Especially arrange to have them giving milk through the winter months when butter is the highest.

The person who was never known to make or sell anything but a fine quality of butter has no trouble in disposing of all he can make.

Very few cows get too much exercise. It is what they get in getting it that does the mischief. Standing at the stable door waiting to be let in is not exercise.

The Turner Center, Me., creamery did a seventy-five per cent of the farms throughty-five cents net per pound of butter.

milk by means of some deep setting system. have worn so deep. Heavy losses are sure to come if this is not attended to.

it in enlightening the man who feeds and cares for the cows, and handles the milk and cream; whether to be churned on his own premises or pooled at the creamery? He knows, if he thinks about it all, that Powdered lime is a good preventive of plant flavor has the emphasis of 10 points while no other quality has over half as many It is doubtful if one parton is fifty of the creameries whose product sales high in competition with others, but fell off more or less points in flavor, ever indulges a lingering thought that he is responsible for the delinquency. If we scrutinize at our fairs and dairy meetings, we find that it is seldom perfection is marked against flavor. I have in mind a butter exhibit where many samples were offered The amount of fat which a cow gives is the dairy. The highest scale of each was

ninety-eight points, both two points off in The neatness of the package has much to do flavor. Several others were perfect on all flavor. These facts are significant and should lead dairymen and farmers to in vestigation and self-examination, to find at whose doors the delinquency lies. have no hesitancy in saying, however, that nine times out of ten the farmer is at falt. I have enumerated the causes for off flavor in butter, but one of these tower as high above all the others in point badness as the sun excels the moon in brightness. And that is the 'environment of the cows,' the condition in which she is kept. Were I to classify the causes generally accredited to off flavor in but ter it would be thus: Environment, 50 points; feed, 20; water, 10; care of milk and cream, 10; handling, 5; churning, 5. There are several things which it is impossible to accomplish in this world; one to make butter that will score forty points on flavor from cream produced from cows kept in the condition we find them on

the reports of experts who judge the butter | man with \$5,000 capital, I would buy 500 sheep and several hundreds acres of cheap land; hire a trusty shepherd, dispense with all pasture fences, and give my principal attention to providing winter fodder, clearing in competition, both creamery and private up land and increasing my stock. It would beat any dairying."

The American Southdown Breeders' association will meet in Chicago on Sept. 27, durpoints, but off from three to six points on ing the period fixed for the sheep exhibit at the World's Columbian Exposition, at which time there will be presented papers from leading breeders, and an effort will be made to have a very full discussion of matters in the interest of this breed of sheep.

Hon. L. S. Coffin, in a paper read before the Wool Growers' association of Iowa said : "] very much doubt if there is a single domestic animal which, when intelligently handled, will in the end, return to the farm and the farmer so much of net gain, when everything is taken into account, as the sheep. There are always at least three returns from the sheep viz., wool, mutton and farm improvement. I am not sure but that every farmer could afford to keep one sheep to every acre of grazing land devoted to pasturing for other stock, even if he never sold a pound of mutton or sheared a pound of wool. Perhaps 1 have made the statement too strong, yet who of us have yet been careful enough in experiments in this direction to make any reliable statement of the value of the animal of the garden hoof upon the soil, and its scavenger work in the field and pasture? The time is rapidly coming in Iowa when a higher standard for farming must obtain. Every acre will be required to yield its best. To this end every unprofitable plant and weed must be kept down and out, and the sheep will be a great help to the careful farmer. To us in Iowa I am inclined to think that the large mutton sheep is the 'survival of the fittest,' For twelve years I kept the Merino and its grade. Then there was in my locality but small de-Systematic breeding is essential to the best mand for mutton. I still love the small, compact form and fleece of the Merino, yet at Sheep seem to be particularly fond of the this time our possibilities for reaching good producing cereals and grasses point, in my judgement, to the large mutton sheep.

ADVERTISE IN THIS PAPER,

barn through their first summer than if turned to pasture. We have proved this many times. Dry hay seems better suited to go with their feed of milk than does the watery

A cool room above ground is better for milk than a cellar, and it should always be iremembered that milk should not stand near vegetables, fish or meat of any kind, as it invariably absorbs the flavor of what is near it.

A cow's absolute confidence in the person who milks her must be secured before she will vield all her treasure to his manipulations. Some dairymen insist on this confidence from their herd by abuse and with a club.

Shelter in summer when the cows are in the pasture is as much of a problem as the provid- head. ing of shelter in winter. If trees are in the pasture there will be danger during thunder storms, and high winds throw down any brush or boards temporarily arranged. It is probably best to erect a covered shed in the pasture, which is open on all sides.

Well made cheese may be injured in the ripening process by an uneven or too low a temperature in the curing. If it ripens too slowly it becomes tough and leathery, and though it may contain its proper proportion of fat, it will loose the feeling of melting in the mouth that a rich cheese should have, and will appear more like a skimmed milk cheese. A dairyman who was milking a large herd of average cows took five of the best and five of the porest ones and, keeping an accurate account of the cost of feed and care, found that while the five good ones were paying a Gen. Pass. Agt fine profit the other five were actually costing

him \$7 per head annually over and above the value of the milk they yielded. Individual test is the only means of ascertaining the profit and loss in the dairy.

Sugar Bounties.

It is said that Secretary Foster's estimlast autumn of an expend. American sugar will not be fully verified The latest use for wire netting is making by the payments, but the amount will number of applications remain to be adjusted. The total crop on which bounty will be paid during the present fiscal year is estimated at about 480.000.000 pounds, an increase of about 100,000.000 over that of the fiscal year 1892.

The production of beet sugar has advanced from 12,004,838 pounds in 1892 to 27,083,322 pounds in 1893, and the applications for bounty on maple sugar will this year be about 3,000,000 pounds, and the cane production about 450,000,000 pounds. The sorghum production is 986,900 pounds and the cane production about 450,000 pounds. Some of the published estimates of the production of cane sugar are apparently excessive, unless they include a considerable amount on which bounty has not been asked for.

The payments on maple sugar will be ton reveals the fact that the number of sheep about \$8,500,000. This would represent, at two cents a pound, 425,000,000 pounds. ber the swine fivefold, cattle twofold and but as some of the sugar is below the two-cent grade, the actual number of
