TO OUR READERS.

The present number is the last of the second volume, and our next issue will be the first number of a new volume. It will be seen that we shall shortly enter upon the third year of the publication of *The Glassville News*. We desire to tender our sincere thanks to the public for the support of our little enterprise; we hope to show them that we are not unmindful of their favours, and will try and deserve a continuance of their esteemed patronage. With the next issue we hope to be in a position to make several important changes in our little paper, foremost of which will be: that we shall double the size of our sheet, and add new features to its literary contents. We desire, and aim to make our paper one of the best in the county if not in the province. In our next issue we shall commence a series of articles on 'The Chemistry of the Farm' in which we shall endeavour to point out those great chemical changes that take place in the laboratory of nature, the action and uses of soils, manures, water and the atmospheric gases as elaborated into plant food; and the importance of a knowledge of chemistry to enable the farmer to assist nature, and wring from her the best results in the cultivation of the food-plants the Deity has so bountifully provided. In these papers the researches of Shier, Lawes, Payen, Boussingault, and other prominent authorities will be used and supplemented by such authorities as we believe to be worthy of considering. It is confidently hoped that these papers will be found worthy of the attention of all those who pursue that noblest of all avocations' agriculture. Vegetable physiology—the organization of plants—the root, trunks, branches, leaves and other principles in which chemistry plays so important a part, will be freely discussed, whilst, at the same time, we hope to make it as pleasant reading as a fairy tale. In special columns will be found in each issue a series of selections entitled 'Bits from Books' in which we shall give from time to time, extracts from the current literature of the day—an innovation in newspaper enterprise that we believe will be appreciated by our subscribers. The news items of the surrounding neighbourhood has been promised by friends, and will in future form an important feature of our little paper. In politics, as heretofore we are entirely untrammelled, and shall always endeavour to snuff out, any political weathercock that we think bent on feathering his own nest, instead of promoting the general welfare and prosperity of the community. We have nothing to expect from any political party, and shall always espouse that side of the politics of day, that we believe to be of the greatest benefit to the great masses of the people. Our motto is and will be: "Pro Rege, pro Lege, pro aris et foci." One thing more, it should be pretty well known that even a small paper like this, cannot be carried on unless our subscribers pay up; we therefore ask those in

te b; P. sat; knowing that through its circulation of this little paper conclusively shows. Our paper circulates largely throughout Carleton County, in Sudbury, King's, York, Northumberland, in Nova Scotia, Quebec, Ontario, in Maine, New Hampshire, North Dakota, Montana, in fact to Great Britain and far Cathay. As an advertising medium we are not to be easily surpassed, this can be easily seen when we say that hundreds of our subscribers read over and over every sentence that appears in our columns; and there are many who have treasured up each issue, with as much care as they would a Malready Envelope or a Connell Stamp.

ELECTION RUMOURS.

The signs of the times point to an impending dissolution of the Dominion parliament, and a new election at no very distant date. Already preparation there is but small room to doubt but at an early date the electors will be called upon to elect representative in the council of the nation. Hitherto we have had but two parties to choose from; now we are threatened with a third party, who are pushing themselves forward and are trying to split up the vote of the constituency. We don't suppose for a moment that our readers will blindly follow any opinion that we may advance; but at the risk of being thought presumptive, we say to the electors: Beware of this third party,—beware of covert attempts to introduce dissensions into your ranks. To Liberal electors we say stand firm to the principles you believe to be right, don't allow any mushroom-like faction to warp your better judgement. To Conservative electors we would reiterate the same advice, don't allow your ranks to be weakened by the blandishments of this party of political adventurers. Fight out the battle on the old party lines, and not let such puerile innovations sway your common sense judgement for a single instant. We would ask—What does this new section of politicians want? The candidates that have been in the field before are men well known for their temperance principles, and better qualified for legislative work than a bigoted fanatic can be.
