**For THE BOLD Y.**

Drake, Nelson, and others, had their "fling," 'Tis of a new champion that now we sing,  
 Whose match is scarce found in the annals of war;  
 'Tis of Commodore Dewey that bold Yankee tar.

Who tackled the Spaniards, and wholoped them sore  
 'Till their squadron, and forts (like their hopes) were no more,  
 And fierce though the fight was received not a scar,  
 True, fortune did smile on the bold Yankee tar.

Immense were the risks that he ran in the fight.  
 He entered the Bay of Manila by night,  
 And early next morn from the forts rang afar,  
 Their welcome to Dewey the bold Yankee tar.

Yes, Dewey was welcomed with shot, and with shell,  
 In turn he did welcome his firemen right well,  
 He sank all the ships that against him made war  
 And he silenced the forts did the brave Yankee tar.

Now Freedom rejoices, and Tyranny quakes,  
 The cheer of the former the foundations shake,  
 Of the latter who sees its overthrow not afar,  
 All honor to Dewey "The Bold Yankee Tar."

**JOHN DUSHAM**

**LIBERTY.**

Oh Liberty! blest Liberty!  
 Thou art the watch word of the brave  
 And manhood's foremost deity.  
 Thy charms inspire the lowly slave  
 To rise and join the freeman's van  
 Hold up his head and be a man.

Oppression thou dost overthrow,  
 And set his long wronged subjects free;  
 Before thy might he grovels low,  
 While they thee praise blest Diety,  
 To thee man lifts the raptured eye,  
 Thou movest him to do or die.

Thy power is felt o'er all the world,  
 Cruel Tyranny declines apace,  
 Where'er thy standard is unfurled;  
 Boast of the Anglo-Saxon race.  
 The Red Cross flag, which none dare mar  
 And Stars and Stripes, thy guardians are.

**WOODVILLE.**

**Farm and Household.**

**Care of Milk.**  
 Milk should be set as soon as possible after being drawn from the cow, whether shallow or deep setting is used. With open setting it must be in a room where the air is pure. A pantry with a door opening into the kitchen is a bad place. The odor from cooking vegetables and meat will surely injure the butter. Many make butter in a cellar because it is cool, but it is apt to impart a musty, mouldy smell to the butter. A cellar may be good and cool, and yet be so ventilated as to have pure air; then it is all right for butter making. To get the best results with shallow setting, the temperature of the milk should not go much above 60° F. At that temperature it can usually stand about thirty-six hours. The time to skim is when the milk has soured just enough to be a little thick at the bottom of the pans and to thicken the cream. The cream cannot be skimmed off when it is thin and sweet without loss. No milk should be taken with the cream. Cream with milk in it sours much more rapidly than cream with no milk in it. This cream will be very rich and thick, and although partially ripened when taken off, if kept at a temperature of 60° or below, it will be all right if held two or three days before churning. Whenever a new skimming is put into the cream jar or can the whole should be thoroughly stirred and mixed.

In the winter effective creaming may be had when the room in which the milk is set is very cool, even down near the freezing point. This is accomplished by heating the milk above 100° F., before setting. The cream will rise very rapidly while the temperature is falling. The warming can be repeating after twelve hours, if the milk is in small pans, by setting over a kettle of boiling water. If large pans are used, such as have been described, the heating is done by running hot water through the water channels beneath the milk. This practice of repeated heating and cleaning makes very effective creaming, leaving very little butter fat in the skim milk, and the cream is rich and thick.

**Dahlia Culture.**  
 Dahlias are most satisfactorily grown from roots, which can be safely planted when the danger of freezing is over. There are three distinct systems of growing, the best of which is the single stem branching system. This method does away with the unsightly stakes and produces fine, symmetrical plants of medium height. In other words, a plant growing

**Another Klondike Disaster.**  
 SAN FRANCISCO, May 9.—Word has reached here that on Monday last, the ice covering a stream in the defile near Crater Lake, gave way under the passing throng of Klondikers, and more than a score of men were precipitated into the water and drowned.

Dr. J. P. Frizzle of Los Angeles who brings the news, passed the scene only a few hours after the calamity occurred. It was on the other side of the summit between Landerman and the Long Lake at a point on the Canyon some 14 miles above Stone Horse, where an ice slide over a mountain stream had been utilized as a path for sleds.

A number of men were advancing in almost unbroken rank, each having a heavy laden sled, when there was a sud-

denly cause, the surface of the ice broke in two feet with a splash, and the men and sleds went overboard. The assistance of the contributor to The Orange Journal and is authority for the following:  
 To secure the best results in dahlias thorough cultivation is necessary. The surface of the soil about the plants must not only be kept scrupulously free from weeds, but thoroughly stirred at all times. This stirring of the soil should be to a considerable depth at first while the plants are small, thus causing them to root deeply and preventing too soft a growth. As soon as they come into bloom, however, all deep cultivation should cease and the surface be stirred only to a depth of about two or three inches. As soon as the flowers begin to grow smaller a top dressing of well rotted manure should be applied to the surface about the plants and carefully worked in.

**causing surface two feet with a splash, and the assistance of the contributor to The Orange Journal and is authority for the following:**  
 To secure the best results in dahlias thorough cultivation is necessary. The surface of the soil about the plants must not only be kept scrupulously free from weeds, but thoroughly stirred at all times. This stirring of the soil should be to a considerable depth at first while the plants are small, thus causing them to root deeply and preventing too soft a growth. As soon as they come into bloom, however, all deep cultivation should cease and the surface be stirred only to a depth of about two or three inches. As soon as the flowers begin to grow smaller a top dressing of well rotted manure should be applied to the surface about the plants and carefully worked in.

**Making a Lawn.**  
 If your lawn is not very extensive, the better way would be to sod it, but if on a large scale, seeding down is by far the best. Of course if you must use it this season, by all means sod it, but provide you can do without using it for one season, seeding makes by far the most permanent lawn. Should you determine to sod, begin by digging the ground in the same way as you would for flower seed. Dig about three feet and then rake stones and rougher parts into the trench, leveling the ground as the work proceeds. When you have gone over the space allotted for the lawn, begin at one end and tramp it down with the feet, keeping the feet close together, taking very short steps, and at the same time walk as much upon the heels as possible. When you have gone over once, begin crossways and do the same; when you have finished cramping take the rake and loosen the surface, levelling the whole before the sod is laid down; then begin at one corner and lay the sod, making sure that the edges are cut straight. After all the sodding is finished take a heavy spade and clap them down flat. Going over them several times. Get some fine soil and spread it over the grass, then rake all evenly so that the grass is seen through. Afterward's give a thorough watering, and the work of making the lawn is finished. As soon as the grass begins to grow it must be cut, and kept well cut throughout the season. Should you decide to sow grass seed, the work on the ground is the same. Procure the best lawn mixture grass-seed, sow very thickly and rake the seed in, finishing by going over the ground with a roller. The sooner the work is done the better.

**The Business Sluggard.**  
 A good many young men spoil their chances for success in life by the frequency with which they come late to business.  
 Arriving at business in good time does not create ability where the same is lacking; but late arrival at business discounts whatever ability the slothful one may have.  
 The bird that is late getting into the meadow secures but few worms, and the young man who is in the habit of getting to business late misses many opportunities for success.  
 The habit of arriving at the post of duty late betokens slothfulness. And no employer will be in a hurry to advance persons of this type.  
 Then the young man who is slow to put in an appearance at the post of duty is usually the quickest to get away from it at the close of the day. In other words, he is quite willing to cut off something at both ends of the working day.  
 The men who have been the most successful in life are those who have been early at the post of duty in the morning and not been in an inordinate hurry to leave it at night, especially when pressing matters required attention.  
 He who would be successful must not only exercise well his ability, but he must use well the time which his own or his employer's business demands of him.

**FOR SALE.**  
 The subscriber offers for sale his farm situated at Osnabog Parish of Hamptstead, Queens Co., containing 60 acres of upland and 20 acres of intervalle, about 40 acres under cultivation, the remainder well wooded. There is also a new house on the farm. The farm is well watered by springs.

**NEXT June Weddings!**  
 Easter has come  
 Its requirements and demands  
 Have been met.  
 It's gone.  
 The next thing to command  
 Our attention  
 Is the gathering together  
 Of pretty, popular-priced things  
 To supply the numerous calls  
 For Wedding Gifts.  
 June always brings the weddings—  
 Lucky occasions for us;  
 China, Pottery, Bric-a-Brac, Silverware.  
 Are the first-thought-of things,  
 Whether the prospective giver  
 Has a dollar to spend  
 Or fifty.

**You Can't**  
 expect a man to write about babbling brooks, twittering birds and flowers that bloom on the hillside, when the cold wind is playing hide-and-seek between his legs and his rheumatism is beginning to come back on him. But we want to tell you about these Elegant Spring-Edge Couches.

**Odd Chairs.**  
 This isn't a public meeting, but all the same, we invite you to take the chair, several in fact; the more chairs you take the handsomer and more attractive you will make your house. It's the height of oddity not to admire our odd chairs, and surely no one is so odd as that.  
 The cheapest easy chair, the easiest cheap chair and the best looking easy and cheap chair we ever sold.  
 You can lean way back or sit up straight—adjustable.  
 Deep spring seat, a wealth of padding and taffing—that's what makes it feel so good, and rests you so.

**For That Tired Feeling,**  
 Try One of Lemont's Couches.  
 We want to talk Couches to you. By talking the right kind of Couches, couched in plain words, we hope to have every house couched with one of our elegant Couches. If your house is not supplied with a good Couch you do not know what you are missing. It's just the piece of furniture needed to supply that aching void. Just imagine yourself reclining on one of our soft, downy Couches, which gives way to your weary weight. But thinking about weight reminds us to warn you not to wait too long, as our line of \$10 Couches are going very fast.

**BICYCLES,**  
**Crescent, Victors.**  
**The Easiest and Best Terms Ever Offered.**  
 If you knew us better, you would be less willing to pry our face. Just at this time, we have a proposition to make to you that will prove of lively interest, as it gives you an opportunity to secure a first class bicycle on the easiest terms and at the lowest price ever known.

**Lemont & Sons.**  
 FREDERICTON.

**Fire Production**  
 has been practiced by all human races; primitive methods and manual labor accompanied their efforts. The evolution of time has seen many improvements—but it has remained to the nineteenth century to witness perfect fire production, which is accomplished by the use of **E. B. Eddy's Matches**
