Farm and Household.

Growing Tube Roses.

Plant four or six bulbs in small boxes, say about 14x16 inches, about the first of April. Give them all the sun on the south side of the house on warm days but be sure to take them in or cover warm at night, until all danger of frost is over, they will grow nicely. If the weather is then dry water well at night, when they are about 12 inches high, place them in the shade of a tree on hot days; the afternoon sun is to hot for them. They will bloom in July and August. They are a waxy, rose white fragrant flower borne on long stems. A box of these lovely roses will fill a flower garden with sweet perfume for a month or six weeks. They will only bloom once from the mother bulb. But the little bulbets will form around the old one, take the box after they are done blooming and set where the bulbs will not freeze and when the leaves die put the little bulbs in a warm place until spring, plant then in the open ground in May. They will not bloom this year, but must be taken up before the ground freezes and kept as the first year, then they will bloom the next year. The original bulbs are worthless and may be thrown away.

Marmalades and Preserves.

Marmalade requires a little longer cooking than jam, because the gelatinous skins and seeds are rejected. The fruit is first cooked until soft. Then mashed through a puree strainer to free the pulp from skins, etc. It is then returned to the fire, the sugar added and the mixture cooked slowly and steadily until it is smooth, and a little cooled on a plate is firm and free from water.

No other preparation of fruit requires such close attention from first to last. Constant and thorough stirring with a wooden ladle to prevent the mass from adhering to the bottom of the kettle will alone insure success. A porcelain lined kettle is better than a granite ware one, because thicker.

These general directions preface the following recipes in Good Housekeeping for several kinds of marmalade:

Plum Marmalade.—Wash, weigh and cook the fruit, strain, add three-fourths of a pound of sugar to every pound of fruit and cook 25 minutes.

Pineapple Marmalade.—Pare and dig out the eyes, grate the fruit or chop it very fine. Cook in its own juice and the least water possible until it can be easily pierced with a fork.

Peach Marmalade.—Pare, stone and weigh the fruit and allow a lemon to every three pounds. Carefully pare the thin yellow rind from the lemons and cook it with the fruit. Put the sugar and pulp over the fire. Boil five or more minutes and carefully remove all the white scum which rises. Add the juice of the lemons and cook ten minutes, stirring constantly. If preferred, the chopped kernels of one third the pits can be used instead of the lemon peel.

Quince Marmalade.—Pare, quarter and core the fruit, and drop the latter into cold water. Cover the parings and cores with cold water, stew slowly for two hours and then strain through a strong jelly bag, extracting all the gelatinous substance possible. Drain the fruit on a cloth and cook until tender in the liquid strained from the cores and parings. Mash the fruit through a coarse sieve, add the heated sugar and cook 15 minutes.

Pear Preserves.—Three pounds of pears two pounds of sugar, a large teaspoonful of water, the juice of a lemon and the grated rind of half a lemon. Put sugar, water, etc., into the kettle with a half dozen pieces of ginger root; boil twenty minutes; put in pears and cook 15 minutes. Skim out pieces and reduce syrup to the consistency of molasses, put back pears and bring to boiling. Can while hot. A little cochineal may be added to give a richer color.

Dried Pears.—Remove skin and core from very ripe pears, slice, sprinkle liberally with sugar and dry in a hot oven. To cook, soak over night in cold water, simmer in the same water until tender; take from the fire, sweeten and add a little lemon juice. A few slices of dried lemon peel will give flavor.

Pear Chips.—This is a favorite old time receipt. Firm, hard pears must be used. Pare and cut into thin shavings, a modern potato slicer can be used. Use a pound of sugar and a gill of lemon juice for every pound of fruit. Boil the lemon peel (cut into strips) in several waters; when tender add it to the chips, also juice; cover with the sugar and let stand twelve or more hours. Cook until clear and transparent, stirring very carefully to keep the chips whole. When done put in bowls or jelly cups reduce the syrup until the quantity will nicely cover. When cold tie up closely.

Remedy for Lice on Hogs.

Before using any remedy, says The American Agriculturist, have the pig house cleaned and hot lime sprinkled over the floor and the walls whitewashed with fresh-burned lime. Then brush the hogs well to remove all the dirt from the skin. Stavesacre seeds 1 qt., water 20 qts.; boil this for one hour, let it simmer for one hour longer, then strain and add water to make up 20 quarts again. Rub a little of this well in all over the body. If the stavesacre seeds

cannot be obtained, use one pound of black tobacco to 30 pounds of water in the same way as the stavesacre seeds.

Gardeners will be interested in an alleged discovery by Camille Flammarion, the French astronomer. He has found, it is said, that plants grown in a red hot-house become in a given time four times as big as those exposed to ordinary sunlight. The poorest development—practically amounting to failure—was obtained under blue glass. Lettuce under blue and green glass did poorly; under red glass it ran up like Jack's beanstalk, blooming fifteen days earlier than under white glass. In fact, under red glass, measured eighteen inches, under green, eight inches, and under blue, six inches. Peas flourished under white and red glass, but perished under green and blue.

TEMPERANCE COLUMN.

Contributed by the I. O. G. T.

All lodges, and others interested in temperance work, are earnestly solicited to contribute for this column. Correspondence to be sent to Secretary, Cambridge Union Lodge; McDonald's Corner.

"Let all who love our Order and desire its progress—who love our Order and desire its maintenance—who would extend a knowledge of our beautiful organization, and perpetuate its principles, which aim to promote fraternity, to unite men and women in acts of benevolence and incite them to a generous emulation for the good of all mankind, that our Charity may be co-extensive with the universe, winning by gentle influence and example the erring and unfortunate victims of the tyrant alcohol to a place in our inner sanctuary, where sweet Peace sits enthroned, and Purity has an abiding place, and Love is the guiding star, unite in a determination to sustain and support this Temperance Column. W. E. B.)

The Rossland Output.

ROSSLAND, B. C., January 3.—The value of ore produced by the Rossland mines during the year just ended, reached the enormous aggregate total of \$2,804,758.12; The shipments were 116,697 tons; for the year ending December 31, 1897, the shipments were 62,000 tons and the value of the ore mined was \$2,100,000. In a single year the shipments from the mines were almost doubled, while the value of the output increased \$700,000 or 33 per cent.

The year has been remarkable for the immense influx of foreign capital, which absorbed some of the better Rossland properties. First in size comes the British-American Corporation, with investments of nearly \$5,000,000 in the north belt. Consequently it came the purchase of Gooderham-Blackstock syndicate of the Centre Star, for \$2,000,000 cash.

Ore shipments from the mines of the Rossland camp, for the year ending December 31, 1898, were as follows: Le Roi, 66,000; War Eagle, 42,779; Iron Mask, 3,509; Centre Star, 2907; Poor-man, 453; Monto Christo, 416; Velvet, 350; Cliff, 140; Giant, 114; Sunset, No. 2, 32; Deer Park, 6; total, 116,697.

Conservative brokers estimate that the volume of business for the year in Rossland stocks reached the enormous sum of ten million dollars. The greatest stimulus was given the market during the time the British America Corporation was acquiring its twenty odd mining properties in this camp, and the activity thus started has never been stopped to any great extent. The standard stocks are today selling for higher figures than ever before.

It is reported that a Montreal syndicate has purchased the British Columbia mine in Summit Camp, near Greenwood, and close to the Great Ore Denoro Copper Mine, at a price of between three and four hundred thousand dollars.

TO CONSUMPTIVES.

The undersigned having been restored to health by simple means, after suffering for several years with a severe lung affection, and that dread disease Consumption, is anxious to make known to his fellow sufferers the means of cure. To those who desire it, he will cheerfully send (free of charge), a copy of the prescription used, which they will find a sure cure for Consumption, Asthma, Catarrh, Bronchitis and all Throat and Lung Maladies. He hopes all sufferers will try his remedy, as it is invaluable. Those desiring the prescription, which will cost them nothing, and may prove a blessing, will please address,

REV. EDWARD A. WILSON, 33-1st, Brooklyn, New York.

The long experience as a practical Accountant and Commercial teacher, of its principal; the thoroughness of the work that is being done; the reasonable rates of tuition, and the very low figure at which board may be had, are some of the things that are making Fredericton Business College the popular college of the Maritime Provinces. Present attendance more than double that of last year. Send for FREE catalogue, Address, W. J. OSBORNE, Principal, Fredericton, N. B.
