Farm and Household.

Soil Affecting Fruit.

Apples are much earlier, even in the same locality, when grown on warm, dry and sandy soils than are those produced on clay soils. They are often large and well colored, but lack keeping qualities. The apple trees are usually not as long lived on sandy soil, partly perhaps because such soils lack potash, but quite as often because the dry soil makes a better harbor for the apple tree borer. The beetle that lays the egg for a borer selects dry and high land, because perhaps instinct tells it that the low land may be liable to flood high enough up the tree to destroy the egg before the borer is hatched out of it.

Prepare Summer Firewood Now.

A thing much neglected is providing the summer's fuel. I have known quite well-to-do farmers stop in harvest or hay time to cut up a few sticks, just enough for the good woman to prepare the next meal with. Or worse let the girls or mother break up enough; the boys or the gentlemen are too badly needed in the hay or harvest field. Stay away from town these days and get your season's wood in the woodhouse where it will dry and be ready for use. Then when harvest is on hand the meals are ever ready and the boys can take a little rest at noon.

Remove from orchard and farm all old, broken down trees and fallen limbs. Burn all the rubbish, cut all that will make fuel ready for the stove. Even the small limbs if properly cut up and laid away will make splendid summer fuel and the best of kindling. All this gives to the place an air of neatness and adds dollars to the selling value.

Pruning Apple Trees.

While there is a difference of opinion as to the best time to prune apple trees, I think good reasons can be given for pruning now. Pruning in March I think is advisable. Surplus branches can be taken off and removed to the brush pile during the fine days from now until the sap starts with as little inconvenience as at any time of the year.

Do not think pruning is an operation that should be performed only once in a few years. It is a continuous operation, lasting from the time the tree is planted until its usefulness is gone. A great mistake is often made by doing severe pruning after the tree has been neglected. There is a limit to pruning and successful results can only be obtained by doing a certain amount each year. With young trees prune to correct bad habits of growth. Young trees should be watched and the formation of undesirable and crowding limbs prevented. Suckers and water shoots should be cut away. Have, if possible, a well balanced tree with a good central leading branch. When removing a branch do not leave a part of it to decay and cut so as to leave as small a surface to heal over as possible.

If a limb has been carefully taken off with a saw it is not necessary to smooth the wound with a knife. It is quite necessary, however, to cover the wound with some material. For that purpose, everything considered, probably thick white lead paint will fill the bill as well as anything. I use grafting wax made as follows: 5 parts of resin, 2 parts of bees wax and enough linseed oil to overcome brittleness. After melting the above materials together add one-half part of linseed oil. Then pour a little of this mixture into water and when cool enough to work do so. After it has been thoroughly worked by hand allow a small piece to become thoroughly cooled; if it then breaks when bent, more linseed oil should be added so as to overcome the brittleness. I use this mixture when it is hot and apply when the tree is pruned. The grafting wax is superior to paint in the matter of healing. Paint prevents checking equally as well as wax and lasts much better. Paint also has the advantage of being much more convenient to handle.

The Child Afraid of the Dark.

A timid child cries when he is put to bed because he is afraid of the dark. The "soft-hearted" parent stays with him simply because he is sorry for him and wants to comfort him. The scientifically trained parent stays with him because he realizes that the child is passing through a phase of race developing in which his imagination has the best of him. It is impossible to reason him out of demonology because his logical faculties are not developed. After all, these two parents, wide apart in point of view, act much the same, and very differently from the pseudo scientific parent, who acts from dogmatic conviction and is sure he is right. He talks of developing his child's self respect and good sense and leaves him to cry himself to sleep, demanding powers of self control and development which the child does not possess.

Poison Hemlock.

Water hemlock is a deadly plant common in most country neighborhoods. Its roots are eaten often in spring by mistake for some edible root, and death frequently results. Cattle are often poisoned by drinking water in marshes where it grows.

The poison hemlock from which the

Greeks take poisons is a near relative to the water hemlock. It stands from two to seven feet high and has clusters of small white flowers and large parsley-like leaves. The stalk, being hollow, is often made into whistles by country boys, and many children are often poisoned in this fashion.

Good Cows.

There is considerable in cows possibility to give a good quantity of rich milk, but it is easy to have that possibility ruined by poor feed and lack of care in bringing up and developing. On the other hand, no amount of feed and care will induce a cow that naturally gives thin, poor milk to turn about and give milk that is rich in solids. Good feed and good care will help develop many cows that have been neglected, but if there is any decided improvement it will be made with cows that are born to be good, but have not had the opportunity. To get the most out of any cow, good or bad, good feed and care are necessary, but it is the good cow that gives the best returns when well fed and cared for.—Dairy World.

Health in Spinach.

We are familiar with "that tired feeling" Now, those who may object to buying bottles and bottles of this cure or that cure for weariness may obtain the same results by a liberal use of the common, everyday spinach. The French call this vegetable the scavenger of the stomach, and now our own medical men are awakening to the wonderful medical properties of spinach. It contains salts of potassium, iron and other things which conduce to a good complexion, long life and a cheerful disposition.

The man with a disordered liver and the woman with a bad complexion, should contract the spinach habit and these things will be rectified. The chemist, Bingo, says that this article of food contains more iron to the square inch than the most renowned ferruginous remedies.

So convinced has the medical profession become of the value of the once despised spinach that, according to the Sanitary Record, "it is already an active ingredient in several new and salable tonics."

The iron in spinach is easily assimilated and the vegetable is easily digested. The fact that spinach has such a remarkable effect upon the complexion will recommend it to the girls, and its beneficial effects on the liver will recommend it to the men. Nothing is so good as a hearty breakfast of spinach.

In short, the virtues of the vegetable are numerous that it would take a long time to tell them, but if the spinach habit grows to anything like the proportion reached by the oatmeal habit we shall shortly turn into a strong, iron built, fresh complexioned, anti-bilious nation.

Humorous.

Clergyman (to peasant)—"Fine weather, George."
George—"For them as ain't got to work, sur."
Clergyman—"Your garden looks well."
George—"To them as doan't ha' to toil in it sur."
Clergyman—"I'm glad the wife's better."
George—"Them as doan't ha' to live w' her may be!"

"Mamma, can I have Jimmie's pancakes?"
"What's the matter with Jimmie?"
"Why, I promised him two of the oranges that Aunt Jane will bring me if she goes to Calyphony nex' year."

Fatal Blunder.

Squalop (who has just received his commission as a justice of the peace)—Miss Wellup, when you make up your mind it is not good for woman to be alone I want the job of marrying you.
Miss Wellup—La, Mr. Squalop, how unconventional you are! Well, go and ask papa.

Brer Johnsing—I seen a white man sleepin' longside ob de road dis mawin', wid a nice big ham layin' by his side.
Brer Jackson—What did yoh do?
Brer Johnsing—Who, me? I done took up de white man's burden!
Flossy—"I don't care, I think Jack Townley is real mean!"
Annette—"Why, Flossy?"
Flossy—"He wrote to me from Florida, saying he had shot an alligator seven feet long and said when he shot another he would have a pair of slippers made for me."

Tompkins—"That's a handsome umbrella you've got there, Gibbs."
Gibbs—"Yes, Tompkins."
Tompkins—"About what does it cost to carry an umbrella like that?"
Gibbs—"Eternal vigilance."

In these energetic go ahead days, we are continually hearing of some new and curious way of making money, but the following method is, perhaps, as ingenious as any previously devised: A little boy entered a drug store and marching up to the druggist said:
"Please, sir, mother sent me to say as how Lizzie's got scarlatina awful bad, and mother wants to know how much you'll give her to spread it all over town?"

We are offering special prices for

LAND ROLLERS A SPECIALTY.
MAIN STREET, GAGETOWN, N. B.

Often in the morning there comes a feeling of weariness, indescribable; not exactly ill, nor fit to work, but too near well to remain idle. A Ripans Tabule taken at night, before retiring, or just after dinner, has been known to drive away that weariness for months.

WANTED—A case of bad health that R.I.P.A.N.'S will not benefit. Send five cents to Ripans Chemical Co., No. 10 Spruce Street, New York, for 10 samples and 1,000 testimonials. R.I.P.A.N.'S, 10 for 5 cents, or 12 packets for 4 cents, may be had of all druggists who are willing to sell a standard medicine at a moderate profit. They banish pain and prolong life. One gives relief. Note the word R.I.P.A.N.'S on the packet. Accept no substitutes.
