## MANY SPLENDORS SEEN IN JANUARY HEAVENS.

Orion, the Magnificent, and Other Constellations On View For the Patient Star Gazer---The Phases of the Moon.

o'clock on a cloudless evening in the the western horizon, with no commiddle af January, and face the spicuous stars, but made notable just south, you will see before you the now by the presence of the planet Jugreatest of all the constellations, Orpiter, and by the advance of Venus ion. It is more than half way from the sunward side.

The horizon to the zenith, and just east of the meridian. Whoever wishes and Taurus, another brilliant first-east of the meridian. Whoever wishes and Taurus, another brilliant first-ence, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference, and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritish Wesleyan conference and was ordained in 1859, in the studied for a mining engineer, but later joined the Eritsh Wesleyan conference and was ordained in 1859, in the studied for a mining engineer was ordained in 1859, in the studied for a mining engineer was ordained in 1859, in the studied for a mining engineer was ordained in 1859, in the studied for a mining engineer was ordained in 1859, in the studied for a mining engineer was ordained for a mining engineer was ordained for a mining engine to become acquainted with the finest magnitude star, Capella, in the condisplay that the heavens afford, will stellation Auriga, attracts our eyes. do well to begin by fixing clearly in East of Auriga the stars Castor mind the outlines of Orion, it serves and Pollux, in Gemini, are seen shinas a point of reference for the other ing about five degrees apart. Casconstellations.

ing fairly well indicated by streams of small stars. Far over in the southwest, beyond the borders of Eridanus, is Cetus, the Whale, not very conspicuous at this season

Returning to Orion and looking above him and westward, we see, alsprinkling of faint stars west of Bellatrix. The 'horns' of Taurus prothe over Orion's head, and each is At a meeting of the Town Countries being bright star in the countries of the countries of the dining room.

The Western Chronicle, which has

iet over Orion's head, and each is tipped with a fairly bright star in the Milky Way, which passes above Orion from southeast toward northwest. The head of Taurus is brilliantly marked by the V-shaped figure called the Hyades, whose brightest star, of the first magnitude, is the celebrated Alde aran. This star is red, of a deep: hue than Betelgeuse. In actual luminosity it about equals Sirius, but being much farther away appears less brilliant to us. It may be remarked here that Rigel, according to Newcomb's estimates, is immensely greater than Sirius, and possibly exceeds the sun in light tenthousand times! But its distance is too great to be measured with our present means.

At a meeting of the Town Counting and request from Counting and the Board of Trade was request from the Board of Trade was required asking the council to idennify the Agricultural Society against of the county and appears this week under its new management. H. R. Lawford is in charge of the paper as editor and business manager.

In accordance with the orders from those who have such matters in charge to ladings in Kentville have been fitted with fire escapes. The Margeson opera house and the Post club building have two escapes added to them this week, so that people may enjoy themselves with a feeling of comparative Safety not before known in Kentville, for both of these buildings were built on the ground that the new compositive volume that the provided the deficit of the deficit of the county and appears this week from the county and appears this week under its new management. H. R. Lawford is the county and appears the was nor th

Taurus is abruptly cut off, and next westward comes Aries, marked by a pair of stars four or five degrees a-

WORLD

If you step out of doors about nine part. Beyond Aries Pisces extends to

the giant figure which the ahcients imagined here among the stars. The row slopes downward to the left. Above it, in a direction at shaped figure of Cassiopela; and press from Halifax due at 7 p. m., and was pastor of the Centenary from 1868 till 1871, and was the second form the row of Second and the case of the row of Second and the row of Second a left. Above it, in a direction at shaped figure of cassiopeia, and press from framax due at 1 p. 12.7, from 1868 till 1871, and was the right angles to the line of the belt, south of Cassiopeia the row of sec-arrived at 2 a. m. The morning and regular pastor, having succeeded and about nine degrees away, gleams ond-magniture starts in Andromeda, freight from Yarmouth, ploughed its not regular pastor, having succeeded Rev. James England. On the death a splendid first magnitude star of a splendid first magnitude star of a slightly reddish color, Betelgeuse, or Alpha Orionis, while on the lower Great Dipper is seen rising, bowl upfound the land of rest, refused to of the board of regents of Mt. Allison

Below the belt, hanging straight down, nearly in a line with the head, appears another short row of smell stars, the middle one of which has a hazy look. This is the sword, and a telescope enlarges the hazy star into the grand Orion Nebula. About five or six degrees to the left of and below the point of the sword is a lone third-magnitude star, Saiph, in the right knee. Betelgeuse, Bellatrix, Rigel and Saiph mark the corners of a large trapezium, in the middle of which shines the belt, and having once recognized this conspicuous ligure, the observer will ever after know Orion. Shows a larged ally draws nearer, of the carth, and as at the same time, she gradually draws nearer, work and a telescope and the point of the sword is a lone third-magnitude star, Saiph, in the right knee. Betelgeuse, Bellatrix, Rigel and Saiph mark the corners of a large trapezium, in the middle of which shines the belt, and having once recognized this conspicuous ligure, the observer will ever after know Orion.
