AGRICULTURE

Notes and Suggestions of Practical Utility

OR THE FARM, FIELD, GARDEN AND DAIRY.

Gleanings of Interest for Our Country Readers.

Sour feed is not fit for a hog. Don't send bob veal to market. Inattention is a bad companion. The skillful farmer is called for. Pride is a worthless spendthrift. Poor machinery is like poor help. Among the roses, grow the moss. A poor system is better than none. A few carrots are good for digestion. Toads make good garden policemen. Hay caps are good things; try them. The bark of young trees needs shade. A slack workman is a source of waste. Boys are prone to copy the hired man. There is no money in "scrub" stallions. Economical feeding involves full rations. Big sums leak out in small expenditures. Machinery represents accumulated labor. There is a liberal education in a garden. A stunted animal never recovers the loss. We as a nation are not economically fed. The best is usually the most economical. Old cucumber seeds are said to yield best. Boys, let the birds and birds' nests alone. Slavery is thus far the lot of the majority. A steady growth is better than a forced one. Keep your feeding places clean and sweet. There is no complete fertilizer for all crops. The many work too much, the few too little. Give the girls as well as the boys a chance. See that your animals have a variety of food. Comfort for the cow means cash for her owner. By constantly changing all good luck is dodged. A few rows of shade trees is a good monument. When you borrow money you borrow trouble. It's a poverty-stricken soul that loves only himself. Grow more oats; that will make them cheaper. The question is not more cows, but better cows. We grow too much heat and fat-producing food. There is nothing better than a man. Try to be one. There is no one medicine that will cure all diseases. Silk worms are no more lovely than other worms. The human ration is not always well balanced. Few men make any business pay without experience. We are a generation of fat, starch and sugar eaters. Set your plants first and water them afterwards. The price is not always a guide to intrinsic value. Waste of trifles eats like interest money in hard times. In our eating, the appetite instead of our judgement leads. The squad that is to bring up the rear is slowly coming. Make the wife chairman of the ways and means committee. The farmer can't fail for want of advice; he gets all kinds. The best-fell worker ought to be the most efficient one. A high selling price does not lessen the cost of production. The best-known use for tobacco is in destroying insects. Don't borrow trouble; you'll have enough of your own. The best place to look for butter fat is on the top of the milk. Every farmer should be an investigator and experimenter. We have too many people trying to live by their wits alone. Make the farm a home—the pleasantest place in all the world. Children are born with tobacco juice and whisky in their veins. Some declare we have too many misfit teachers of agriculture. It is thought one-sixth of the land ought to be devoted to timber. There is no progress in the good-enough-for-the-present system. The needs of the soil should guide in the application of fertilizers. To be a successful farmer, you must keep up with the procession. When his stock is not improving, the farmer is falling behind. Fast trotters are popular, but Steady Pull can't be dispensed with. If a paper is made what it should be, farmers will soon "catch on." Canada thistles on old and worn out soils are said to not bear seed. Partisanship blinds the reason and makes the victim an easy prey. There is a good deal of repetition in the bulletins of the different states. Cost should represent the amount of labor force there is in the article. Who is afraid of the blades of grass? They make instead of shed blood.

ANECDOTES, HAPPENINGS AND GENERAL COMMENTS

Clipped and Condensed for the Readers of The Globe.

The directors of the Banque Nationale at Montreal, have decided to open a branch at Chicoutim on the 10th instants. Inland revenue receipts at Toronto for June amounted to \$96,686, against \$107,726 for the same time last year. The total for the fiscal year, ending June 30, were \$1,715,818 against \$1,042,683 for the previous year. At Winnipeg the political fight is going merrily on, becoming warmer every day. The leaders of the two parties are stumping the country from end to end. Indications point to a hot contest on the 23rd, election day. Mr. Oldboy: "And I want you to understand, once for all, I won't have the house filled with your abominable 'protoges.' What use on earth have you for that pet monkey in the next room?" Young Wife: "I really must have something to amuse me while you're so much away, dear!"

THE DAIRY.

It has been long known that the quantity of milk yielded by each of the four tests of same cow may vary considerably, and later it has been discovered that there may be quite a difference in quality. This being the fact, a contemporary thinks it "opens up vast possibilities for dairying," in the way of cultivating and developing the milk yield of the defective quarters, and suggests that there will follow bottles with highly concentrated foods for internal application labelled, "Foreign-test cream producer," etc., and the results will be that each test will be made to produce as much rich milk as the other! This looks like a joke, but appears to be put forth seriously. We would suggest, however, that greater improvement might be made by proper selection and breeding from cows with evenly developed udders, rejected for breeding purposes all cows with deformed and imperfect or unevenly developed udders. It is easier to grow a perfect udder than to tinker and doctor an imperfect one into perfect balance. Not only is there a difference in the amount of butter fat produced by different milkers, but by the same milker when he milks in different ways. Dr. Babcock says he has found that milking one test at a time, finishing each test before commencing the next, has always resulted in much poorer milk than when two tests were milked at a time in the ordinary way. A peculiarity shown in all of these tests is that the order in which the test are milked has a decided influence upon the quality of milk from that test. As a rule the first test milked, no matter which test it is, yields milk of about the same average composition at that obtained from the cow when two tests are milked at a time. The second test gives richer milk than the first, the third much poorer, and the last test the poorest of all. The difference in the yield of fat in milk from the same test when milked second and when milked last, has in some cases been as much as 4 per cent. The great variations in the per cent. of fat in milk caused by different milkers and different modes of milking, are not promising for the introduction of milking machines, should a really successful machine ever be produced. Dr. Babcock says he has noticed that "where milking tubes were used, thus avoiding all manipulation of the teats, the average amount of fat obtained in the milk was only about one-half as large per day as when the cows were milked by hand. In one case the fat was reduced to one-third the usual amount. All this was accomplished without materially reducing the amount of milk given. In some cases more milk was obtained with the tubes than by hand milking. In all of these trials the greatest difference in the quality of the milk was found in the first milking after making a change. After this the cows seemed to partially adjust themselves to the new method, but in no case did they reach the standard obtained by hand, nor was there any indication that they would have done so had the test continued indefinitely. Nor did the cows make up the loss when milking by hand was resumed. From the result of these trials," he adds, "I am led to believe that the introduction of machine methods for milking, as has from time to time been proposed, would not only result in a poorer quality of milk, but in a shortened period of lactation and in general in lowering the standard of dairy animals."

JINGLES OF HUMOR.

A Little Nonsense Gathered for Leisure Reading.

Friend (to literary man)—I don't see why you are not more of a success.

Literary Man—Laziness.

Friend—Why, I am sure you are industrious enough.

Literary Man—Oh, yes, I am industrious enough, but the people are not. They are too lazy to read what I write. You understand!

Miss Browning (of Boston)—Mr. Berrill, o you believe that a rose by any other name would smell as sweet?

Mr. Berrill (of Chicago)—It would to me.

Miss B. (innocently)—Why?

Mr. B. (miserably)—Because I, have had fever.

The minister was dining with the family and he said to Bobby, with an amused smile: "I'm afraid, Bobby, that you haven't the patience of Job."

"No, sir," responded Bobby, who was hungry, "but Job wasn't always helped last."

A little girl in New York was in the habit of going to the Episcopal church, and one day she came home and asked her mother if the prophets were hung on the commandments as gifts were hung on Christmas trees, for she heard the minister say: "On these two commandments hang all the law and the prophets."

Mr. Gotham—Here, sir, is some whisky which I have had in my cellar for twenty years.

Col. Kaintuck—Well, well! How did it get lost.

On the way home he inquired: "Mamma, does God make snakes?"

"Why, yes, Eddie, I suppose he does," was the hesitating answer.

Eddie, after a moment's thought: "Well, if he got a sniff of one once, I'd bet he'd never make another."

Stump Orator—I don't think I take with the masses.

Admiring Friend—Nonsense! You are winning golden opinions.

Orator—Yes, it looks like it, when I speak night after night, and never receive the least applause.

Friend—That's what I said. Silence is golden.

"Yes," said the young doctor, proudly, "though I do have to stand like Patience on a monument waiting for customers, I always manage finally to stand the monument on the patients."

Clerk—Will one flannel shirt be enough, sir?

Customer—Yes. I only expect to be gone a month.

The First Forged Bank Note.

Sixty-four years after the establishment of the Bank of England, the first forged note was presented for payment, and to Richard William Vaughn, a Stafford linen-drafter, belongs the melancholy celebrity of having led the van in this new phase of crime in the year 1728. The records of his life do not show want, beggary, or starvation urging him but a simple desire to seem greater than he was. By one of the artists employed (and there were several engaged on different parts of the notes) the discovery was made. The criminal had placed a number of these forged notes in the hands of a lady to whom he was attached, as a proof of his wealth. There is no telling how much longer bank notes might have been free from imitation had this man not shown with what ease they could be counterfeited. From this period forged notes became common. Vaughn was executed, and many another lost his neck for the same crime, before capital punishment for forging was abolished.

Forty Thousand Dollars for an Opinion.

It is not generally known that Edison received in one instance a fee of \$40,000 for his opinion as an electrical expert. He was employed by the company organized to bore the Niagara power tunnel to examine the ground, study the conditions and plans, and give an opinion as to the feasibility and practicability of the work. He received the fee named. Other experts from various parts of the world were also consulted, and there was concentrated upon the plans an amount of expert knowledge such as has rarely been invoked for any one undertaking.

The Duke Shaved the Barber.

The eccentric Duke of Wharton found one day, after being shaved that he had no money to pay the barber. "It's no matter, your Grace," said the man. "But I hate to be in debt," rejoined the Duke; "therefore sit down in that chair, and I'll shave you, and then we shall be even." The barber yielded, and his Grace performed the operation in a creditable manner for a non-professional. "There, friend," he exclaimed, on finishing his task, "I am out of debt." Then he ran off laughing boisterously.

Where Women Reign Supreme.

In the valley of the Barca in Abyssinia there is, according to a recently returned traveller, a community where the women without holding meetings or agitations of any kind, have emancipated themselves. All the women work hard while the men are idle, but by way of compensation the house and all that it contains belongs to the wife. At the least unkind word she turns the husband out at night, in storm or rain, and he can't come back until he makes amends by the gift of a cow. The wife considers it a duty to abuse the husband, and if she were weak enough to show any love for him in life or grief at his death she would be scorned by her tribe. The wife, without any reason may strike her tent and go, taking with her one-third of the joint possessions. The husband, unless he is travelling, may not live out of his tent, but the wife may go to her parents for a year and annual for the time her own marriage.
