**NONE OTHER GENUINE.**

## AGRICULTURE

Notes and Suggestions of Practical Utility

OR THE FARM, FIELD, GARDEN AND DAIRY.

Cleanings of Interest for Our Country Readers.

Pansies like a rich soil. Plants breathe at every pore. Work on business principles. All animal life likes freedom. Learn how to feed your crops. Sweet food makes sweet meat. A good start is half the battle. Cut the weed; don't let it seed. Quality stands first in the dairy. Eggs are not made without food. Give everything room to grow in. Do not let a tree mature useless fruit. Make a little improvement every year. The leaves-of trees form a good mulch. Give free circulation of air everywhere. From poor food only poor results come. Manure broadcast rather than in the hill. Opportunity is necessary to show ability. See that clover-fed hogs have plenty of salt. Pinch back the vines if you want tomatoes. Trust not entirely to memory in business. A coarse mulch is good for cucumber vines. A sprinkler in the garden is indispensable. Hunger and poor fences make unruly stock. Get your product to market in good condition. The middleman's profits are the consumer's loss.

Rest and recreation are parts of the duty of life. Feed only such animals as will pay for their keep. There is economy in clean, smooth meadows. Sunflowers are said to make good poles for beans. The larger kinds of geese make the best returns. Don't be anxious to tell what you don't know. One step at a time leads to the top of the ladder. Who takes any more comfort than the farmer? A sudden change of diet is generally injurious. Weeds, if let alone, will take care of themselves. The better the pasture, the less the grain needed. Production should always be guided by the demand. Everything needs time and room in which to grow. Misunderstanding is the mother of many lawsuits. A sensitive man does not like to eat his own pets. The good hen lays only an egg a day, but it counts. Americans are said to be extravagant flower devotees. A little lime is now used in spraying with arsenites. Lean meat is a concentrated form of albuminoids. Stock may receive too much as well as too little care. Remember, food and air sustain the life of the animal. If you grind food, grind it fine and save mastication. What may be easily prevented is often slow to cure. Comfort the year round is the rule in keeping animals. The man dignifies the pursuit, not the pursuit the man. Soaking and drying farm machinery does not improve it. To make fat milk, you must have a fat-producing cow. A porker should never see two winters or two summers. Work in an orderly way and keep tools in orderly array. Never leave a nail sticking up through a board anywhere. In the case of burns, the first thing is to exclude the air. A farm without a tool house is like pants without pockets. If you send fowls to market alive, provide for their comfort. Independent thought is necessary to freedom and progress. No one yet knows the capacity of soil or how to best treat it. Give to working stock frequent but moderate draughts of water. Scalding water is said to be the best disinfectant for glanders. Many of the most labor-saving implements are for use by hand. Maturing worthless fruit is as exhaustive as maturing good fruit. Familiarity with objects is the only remedy for shyness by a horse.

Is it necessary to wait for a rainy day in which to repair fences? Road-making machines appear to be increasing in popularity. Good work depends not so much on the tools as on the workman. Let the little ones help; they will be the happier and better for it. France will make a brilliant floral display at the Columbian fair. If you cannot have all your stock of the best have the best you can.

Poultry in good condition will readily sell, no matter what the breed.

Waiting patiently and doing small things faithfully are prime virtues.

Salt is not so much of a fertilizer as a solvent of fertilizing material.

It is an upright man who can do exact justice to both friend and foe.

The neglected detail may become the broken link that causes disaster.

It is not much of a man who will not give a civil answer to a civil question.

"Wherever you see a head hit it" is an effective way with stubborn weeds.

A teaspoonful of saltpetre to three gallons of water is said to destroy vine bugs.

Learn all you can from others and do not depend entirely on your own experience.

The celery plant is said to be improved by cutting back the sets two or three times.

The question with the individual is. Which is the more profitable beef or milk?

Overfeeding weakens the offspring; under-feeding does the same. Here extremes meet.

"Died of overwork" would be the appropriate inscription on the tombstones of too many.

The cultivation of the head and heart is of more consequence than the cultivation of the soil.

The man who does not feed his own mind is a poor provider of foods for plants and animals.

A man of moderate sympathies can be very philosophical over calamities at another man's expense.

There is more anxiety expressed to sell dairy apparatus and machinery than to improve the dairy.

Berries picked in the heat of the day do not keep as well as those picked in the cool of the morning and evening.

The dairyman colors his butter to make it appear better than it is; the oleo man colors his goods to make them appear like a better article—both frauds, differing in degree.

## THE DAIRY.

The Maine Farmer calls attention to the fact that with the gravity system the cream rises itself without direct cost or expenditure of muscle. It says: "You pour the milk into the cooling can and nature does the rest. On some farms the demand for an hour of crank work and another hour for cleaning the machine would come very inconvenient; on other farms there would be a direct advantage. The most that an agricultural paper can do is to call attention to general facts, but in the application of them each individual farmer will have to be governed by his own local surroundings and circumstances." If you have got money to put into the machine and can save time and labor enough in running it to pay the investment, or can get enough more butter out of the milk or enough better quality, to cover all the contingencies and drawbacks, we can see no objection to accumulating more apparatus, tools and machinery.

The New York Times says: "A pure bred Dutch cow, with the satisfactory Dutch name of *Salzette*, owned by a New Jersey dairyman and recorded in the North Holland herd book, and which has repeatedly given 100 pounds of milk a day, was purchased by the present owner for \$45. Had this cow been entered in the Holstein herd book, her value would have been not less than \$500, as her fortunate owner says. And here is the most extraordinary part of this tale of a cow. There is not such thing in America as a Holstein cow, but those so-called are Holland or Dutch, (as this cow is,) as they come from a province of North Holland known as *Friesland*. And so there are Holstein-Friesland cows, so-called, which is as near to the right name of this breed as the American breeders of these cattle can come. And an honestly named cow, owned by one who calls her by her proper name, is worth less than 10 per cent. of the value in the market of those cows that go by a name to which they have no right. Is it anything surprising that this curious kind of business is left to the professional breeders and farmers keep out of it?"

At a dairy meeting in England a Mr. Simmons quoted some curious data for the previous 100 years. In 1799 some cows were yielding as high as 25 pounds of butter per week. The scientific explanation of the advantage of keeping a few Jerseys in an Ayrshire or Shorthorn herd—namely, that the larger fat globules of the rich milk of the Jerseys assist the smaller globules in the Ayrshire or Shorthorn milk to rise—has always been claimed as a result of modern dairy science. And yet Arthur Young stated the same thing in the closing year of the last century. Rations for stock were then given, and these may have been as nearly right as such things now as no such thing as a fixed scientific ration exists. Such a thing is possible. We have only approximations subject to the judgment of the feeder and the existing conditions, which always ought to be known, but must be to a large extent guessed at. The improvement of the age consists mainly in the invention of means to ends—in apparatus and machinery—rather than to the discovery of any new principles, which never change. New facts are constantly coming to light, but they do not affect our methods as much as the production of labor-saving inventions.

## As Pale as Death.

Mr. E. T. Bailey, Elkhorn, Man, writes: "My daughter was as pale as possible for a living person to be, short of breath, and terrible pains in head. Pink Pills cured her." Of all dealers or by mail at 50c. a box or six boxes for \$2.50. Dr. Williams' Med. Co., Brockville, Ont., and Schneectady, N. Y.

"What do you publish a paper for, I'd like to know?" sarcastically inquired an irate politician, tackling a country editor. "For \$2 a year, in advance," responded the editor, "and you owe for four years."

## PARAGRAPHS

On All Subjects of Current Note at Home and Abroad.

ANECDOTES, HAPPENINGS AND GENERAL COMMENTS

Clipped and Condensed for the Readers of The Globe.

Los Angeles is engaged in a crusade against the mashers.

A strike of petroleum is alleged to have taken place at San Diego.

The Board of Supervisors have ordered electric lights for Yuba City, Cal.

1,500,000,000 pounds of butter are consumed yearly in the United States.

The Napa river is being improved by a new steel bridge costing \$28,000, at the town of that name.

Redlands is building a system of storm water drains to avoid a repetition of the flood of a year ago.

According to an Albuquerque daily, one of the conspicuous needs of New Mexico is a legal hanging.

Ventura has a Chinese fire company. It is said to be more amusing than a circus to watch them fight a blaze.

Redwood City is evidently a good town for rats. Two dogs killed 103 in one day, according to the veracious chroniclers of that burg.

San Bernardino county is contemplating the making of a native salt palace for the World's Fair, using blocks of crystallized salt that measure 12x24 inches and are perfectly transparent.

## LOTTERY SWINDLES.

One Apparently Fraudulent on its Face—Three Managers Arrested.

The headquarters of two lottery concerns which have been circulating their tickets throughout the city of San Francisco were raided by the police. One of the schemes exposed has the appearance of being a rank swindle. Its business was transacted in rooms at 508 Montgomery street and the tickets sold purported to be for weekly drawing of the Louisiana State Lottery. [There being no lottery drawings of this kind, the tickets were at once set down by the police as bogus. An officer disguised as a sailor, called at the offices and made arrangements to go out as an agent for the concern. He was to receive 100 tickets for \$10. The tickets were to be sold for 25 cents each so that he could make 15 cents on each one. When the tickets were finally produced the manager of the office was placed under arrest and charged with maintaining a lottery. At the city prison he gave the name of William Hampton but his true name is believed to be E. W. Ham-brook. The man is unknown to the police. quantity of lottery circulars and 150 tickets were seized. The circulars bear the name of D. D. Spence at the bottom.

The other head raided was at 850 Market street, the headquarters of a scheme known as 'E. Fox & Co's Louisiana Supplement—the Kansas City Lottery.' Thom as Callihan, an ex-policeman, and J. A. Frost were arrested for keeping the lottery place and for selling lottery tickets. Several hundred tickets were seized.

## FOREIGN PAPER MONEY.

The Bank Note Currency of Various Countries.

The Bank of England note is five inches by eight in dimensions, and is printed in black ink on Irish linen water-lined paper, plain white with ragged edges. The notes of the Banque de France are made of white water-lined paper, printed in blue and black, with numerous mythological and allegorical pictures, and running in denomination from the twenty-five-franc note to the 1000 franc. South American currency, in most countries, is about the size and appearance of American bills, except that cinnamon brown and slate blue are the prevailing colors, and that Spanish and Portuguese are the prevailing languages engraved on the face.

The German currency is rather artistic. The bills are printed in green and black. The Chinese paper currency is in red, white, and yellow, with gilt lettering and gorgeous little hand-drawn devices. The bills, to the ordinary financier, might pass for washing bills, but they are worth good money in the Flowery-Kingdom. Italian notes are of all sizes, shapes and colors. The smaller bills—five and ten franc notes—are printed on white paper in pink, blue and carmine inks, and ornamented with a finely engraved vignette of King Humbert. The 100-ruble note of Russia is barred from top to bottom with all the colors of the rainbow, blended as when shown through a prism. In the centre in bold relief stands a large, finely-executed vignette of the Empress Catherine I. This is in black. The other engraving in not at all intricate or elaborate, but is well done in dark and light brown and black inks. The Australian bill is printed on light-colored thick paper, which shows none of the silk fiber marks or geometric lines used in American currency as a protection against counterfeiting.

Mr. Standardoil: "Is it my daughter you want, or is it her money?" Tobias Howens (amateur champion hundred yards): "Mr. Standardoil, you surprise me. You know very well that I'm an amateur athlete." Mr. Standardoil: "What's that got to do with it?" Tobias Howens: "A great deal, sir. It debars me from taking part in any event for money."

## JINGLES OF HUMOR.

A Little Nonsense Gathered for Leisure Reading.

Mother—When that boy threw stones at you why didn't you come and tell me instead of throwing them back?

Little Son—Tell you? Why you couldn't hit a barn door.

She—You men are so changeable! Before we were married you didn't go to the club every night.

He—I couldn't, my dear, when I had to call on you every night. I'm not away from home any more now than I was then.

First Seaside Girl—There's a great man-eating shark down on the beach, dead. What do you suppose killed him?

Second Seaside Girl—Starvation, probably, if he was a man-eating shark.

Squidling—Is Red Cloud that Indians real name?

McSwilligen—I suppose so. Why do you ask?

Squidling—I thought it might be a Sioux-donkey.

Brown—Isn't Jones a man of very strong opinions?

Gray—You wouldn't think so if you should hear how violently he expresses them.

'Is your father at home?' asked Mr. Smith.

'No, sir,' answered Dan; 'but you will find the grindstone in the shed.'

'I do not care for the grindstone,' replied Mr. Smith. 'What makes you think I did?'

'Because papa says you never come here unless you have an axe to grind,' answered Dan innocently.

Smart Boy—Please ma'am, it was two minutes after nine when you got here. When we are late you keep us after school.

Teacher—Very well. You can all stay and keep me after school, if you wish. (Smart boy subsides.)

He—Tell me, dearest, did you ever love before?

She—I must be frank with you Harry. Yes, I did love once, but that was many years ago. When quite young I had a warm attachment for a doll with a black face. I did love that doll devotedly; but Harry, that is all passed now, and you need not be jealous of that old, old love.

Jaques—Fadler, a shentlemans half fallen troo de coal hole!

Isaac—Clay do cover over him kervick mein sohn, vill I runs for a policemen. Ve must arrest him for trying to steal te coal or he'll see us for tamages!

Lummuik—I never knew a woman who could throw straight.

Skimquillet (ruefully).—Miss Ophelia threw me straight enough.

Wife (after the theatre)—How lovely the moon is, John!

Husband (it was a five-act play)—Yesh m' dear (hic) both of 'em beautiful.

Elder Jones—Well, Brother Smith, how many have you in your new church?

Elder Smith—Oh, two hundred and some odd. How many have you?

Elder Jones—Two hundred and all odd.

'Happy couple' mused Pomper, as Mr. and Mrs. Fresh passed by. 'What trusting love! Why I've known that man to wear a home-made smoking jacket and imagine that it fitted him.'

'I came here,' said the youth to the Boston girl, 'for a little rest and peace of mind.'

'Ah,' she said. 'You appear to have peace of mind; when do you expect the rest?'

X was paying attention to a rich widow.

'Madame,' he said, as he offered her a bouquet, 'you grow more and more beautiful every day.'

'You exaggerate, my dear sir,' exclaimed the lady, 'very much flattered.'

'Well, then, let us say every other day.'

## Worse Than Dynamite.

Hardly a month passes but we read of terrible explosions and loss of life from natural gas.

One writer has raked up Chinese history, wherein it appears that way back in the time when the famous Chinese wall was building, before the use of gas wells was discovered, a terrible explosion took place.

The big wells in some way got the start of the little ones, so that enormous volumes of air was sucked down into those subterranean magazines. When the air reached certain proportions, the whole thing went off like a leaky gasoline stove. The result was horrible in the destruction of lives. The same writer predicts similar conditions underlying the great natural gas belt of this country, from Toledo through Ohio, Indiana and Kentucky whereby that whole vast region might be ripped up to the depth of 1500 feet, leaving a chasm for the waters of the great lakes to pour down into, blotting out every living human being in this now densely populated valley from the face of the earth. That writer might easily have shown further that throughout our whole country not only in densely populated regions and cities, but in country and village houses as well, natural gas is more dangerous than is found in the lake regions, are carrying off not only "pig tail Chinamen" but our own families and friends, during the hot waves of July and August.

Scores of people are dying daily from typhoid fever, diarrhoea, dysentery, cholera-morbus, and infant summer complaints; all
