### A WANT SUPPLIED.

Having noticed lately the eagerness of purchasers of Ready-Made Clothing to get a better article than that which is imported from Montreal, I have decided this coming year To Fill the Bill, and am now showing a line of Custom Made Clothing at Ready Made Prices.

Ask to see the Fifteen Dollar Custom Made Overcoats.

A few suits of Montreal clothing that I have on hand I will close out BELOW COST. I would also call your attention to the fact that I am closing out my stock of Gents' Furnishings, consisting of—White and Regatta Shirts, Neckwear, Suspenders, Collars, Cuffs, Caps, Silk Handkerchiefs, etc., consequently

### AGRICULTURE.

#### Notes and Suggestions of Practical Utility

FOR THE FARM, FIELD, GARDEN AND DAIRY.

Cleanings of Interest for Our Country Readers.

Feed according to need

Keep your barnyard dry.

If you want good stock, raise it.

There is no profit in breed alone

Good goods make a good market.

What are you doing for the girls?

Keep the mice out of your beehive.

The demand for scrubs is not lively.

Adopt a system of rotation of crops.

Give your cows a good bed to lie on.

Discontent is the beginning of progress.

Cottontail in any form is bad for swine.

It is all wrong to make a scavenger of the hog.

Whatever is lost in flesh is so much dead loss.

Too many fruit trees are starved to death.

A lath will cover a crack and stop a draft.

Keep dry dust where your hens can get at it.

Your pigs should be kept, not only warm but dry.

Don't worry yourself to death about cholera.

The barn owl is death on rats. Give him a roost.

There are no heavier milkers than the Friesians.

Much that passes for dignity is only stupidity.

Sometimes silence gives the best instruction.

The three-legged is the best form of milking stool.

The poorest butter fat is that which separates fast.

You must not judge of the quality of your feed stuffs.

Ventilate your cellar into your kitchen stove pipe.

The Belgian appears to be the coming draft horse.

There is no better beef breed than the Shorthorns.

Which is the best breed of cows? The one you prefer.

Defects are often in the engineer instead of the boiler.

Straw is better than leaves for covering strawberries.

Every fly destroyed now reduces the next summer crop.

The truth enrages some people as a red flag does a mad bull.

Uniform conditions are necessary to secure uniform results.

When cows have access to salt they will not eat too much.

If you burn wood, cut it this winter for next winter's use.

A good beef breed is a great help in producing good beef.

Apples are good for milch cows. Begin to feed moderately.

There is no more hardy and active breed than the Ayrshires.

Much nonsense is written about the economy of creameries.

There are no richer milkers than the Jerseys and Guernseys

A good pedigree is valuable when a good animal is attached to it.

What does the man amount to when the dollar stands in the way?

Perk as much as milk is affected by the food of which it is made.

Good animals command the best prices and are the first in demand.

The back of the seat of the buggy is not the place for hens to roost.

Is there anything you can do for your wife to make her work easier?

Weeds are natural; the good and useful come only by cultivation.

The larger the herd, the less is likely to be the average yield per cow.

Do not be afraid to give your sheep a moderate amount of corn silage.

Go through your cellar frequently and remove all decaying vegetables.

Fresh air penetrates a warm room more freely in winter than in summer.

Where dairy goods are the main objects, beef and milk must be incidental.

Line your corn crib with woven wire and keep out rats, mice and squirrels.

Generally the per cent. of fat is greater than that of the casein, but not always.

Don't cast your pearls before swine is an old injunction and often very discouraging.

We need means of balancing the quality as well as the weight of the ration.

Disregard of the rights of others causes a large proportion of the misery in the world.

Have you planned for to spend the winter evenings pleasantly and advantageously?

Quality cannot be ascertained by the scales, but sometimes it can to a limited extent.

When cold winds blow through the stable, they take fat and milk right out of the cows.

It does not pay to abuse a cow because she continues to give milk until she calves again

Build up your herd for some definite purpose—beef, butter, cheese or milk for market.

The effects of a fertilizer depend upon the condition as well as the composition of the soil.

Sometimes the driving of a single nail in the right place will exclude a large amount of cold.

The horse that goes so far in a day that he cannot get back in a week is not the one that you want.

The presence of a kerosene lamp will often keep the frost out of a cellar. A small stove is better.

Improve your property and see how soon the assessor will punish you by putting up your taxes.

Under proper conditions, cold deep setting of milk is as effective as the separator and vice versa.

Gluten meal is deficient in mineral elements, or ash, and therefore not good for growing animals.

A Year's supply of wood on hand gives a comfortable feeling and makes the housewife good natured.

Fat is not necessarily wasted because it remains in the milk; it is all the better for your animals.

The cold air, being heavier, is constantly pressing out the warm air in your room and taking its place.

The balanced ration is a delusion unless the quality of every article of food of which it is composed is known.

All milk sold in Copenhagen Denmark, has to be first filtered through layers of sand, gravel and fine cloth.

There are no better cheese cows than the Friesian. She is also good for butter and her male offspring for beef.

It may be well to buy a hand separator if you can afford it in your dairy. Accumulator doing the churning at the same time, would be better.

### THE DAIRY.

An Article to the Men Who Know All About It.

To the man who thinks he knows it all and refuses to attend dairy conferences and the meetings of dairy associations, because book and newspaper men who read papers at these gatherings are not "practical." The American Dairyman says: "Well, now suppose you do think you know it all, suppose you go there and point out the mistakes. We guarantee you will not be harshly treated. You are just the man the instructors want to reason with. We have stood by them and heard men poke questions at them that were evidently intended to show them up; but the answers are always respectful and the butter made of such a quality that it commands the respect of the old lady who is the sixth or seventh in the line of a family of better makers. Perhaps the butter made does not suit your taste, but it looks fine and sells high, and if money is what you are after then by all means swallow your prejudice and learn a little bit about how to get more money for the butter you make, even if you have to admit that the methods pursued are a little new fangled. If you are arching to teach them there is a great opportunity at these conferences to add to your stock of information. These instructors do not as a rule make long, set speeches; they simply talk right along about the matter in hand and in the most entertaining way possible, besides they work the churn and the Babcock test, and show you how the whole thing is done from start to finish. It is an object lesson, while they will explain the principles of any part of the work that you may wish to enquire about." Those men who are so knowing that they refuse to attend dairy gatherings do not seem to be aware of what a great opportunity they miss in not attending and showing up the false and impracticable teachings of the professors and theorists, and thereby enlightening their fellows.

### Yield of the Dairy.

A dairy census of the town of Bovins, in Delaware county, by the New York state dairymen's association, showed 117 farms, principally devoted to dairying. It showed a wonderfully high average yield of the dairies in the town. Here is a sample: J. D. Mitchell, 15 registered Jersey. Acres in farm, 105, assessed at \$1,700. Acres in meadow 25, pasture 60; value of hay and roughage per cow, \$18. Value of calves, \$340, viz. 8 at \$30 each, 4 at \$25. Value of pork, \$54. Value of grain bought per cow, \$15; fed 10 months. Ration nearly 5 lbs. per day of corn meal, cottonseed meal and wheat bran. Butter sold, 4,492 lbs. at 25 cents. Deep setting for creaming milk with water at 60°. Cost of keep exclusive of pasture per cow, \$34. Total earnings per cow, \$101.14. Twelve calves kept five weeks on whole milk of the herd, and all but two of herd under eight years old. Here are a few of the conclusions reached by the report: Where grain is most liberally fed, the largest amount of product was obtained most economically at or least cost. Almost every herd is composed of Jerseys or Jersey grades and the butter of the town is of remarkably uniform excellence. This uniformity is due to uniformity in breed, and similarity in conditions and management. The net yearly earnings, per cow, varies from the minimum 84 cents to plus \$101.12. Only full blood cows earn \$80 a head. All falling below are grades. Cream is very generally raised by the gravity process, in spring water, very little ice being used. The Babcock shows considerable loss of fat. On very many farms it would pay to employ a baby separator, run by some light power. The grain feed is almost entirely purchased. There are but few silos, but all who have used them like them. Many young calves die of bowel trouble from some unknown cause. In many stables the cows are overcrowded and the ventilation is bad. To this the bulletin attributes much of the loss in calves. Nearly three-fourths of those engaged in dairy work are young farmers with young families and a gratifying appearance of thrift and happiness.

### PARAGRAPHS

On All Subjects of Current Note at Home and Abroad.

ACQUOTES, HAPPENINGS AND GENERAL COMMENTS

Clipped and Condensed for the Readers of The Globe.

There were 25 cases of cholera in Hamburg last week and two deaths.

A Connecticut advertiser paints posters on cows in fields near the railroad.

Poet William Watson's insanity is attributed to chloral used to cure insomnia.

Cornelius Vanderbilt has given \$5,000 to the Police Pension fund in New York city.

Eugene Campton, the murderer of two men, was publicly executed by guillotine in Paris.

Kittie L. Sprague, nee Potter, sued her husband for divorce in Denver, won and then remarried the man.

President-elect Cleveland is soon to be initiated into the Sigma Chi college fraternity as an honorary member.

The New York club has accepted Lord Dunraven's challenge for an international yacht race for America's cup.

While holding his baby on his knee in his home, William Beekham, residing near Fort Stephens, Miss., was shot dead.

The extreme winter weather which has prevailed in Western Kansas this month has caused much suffering among the settlers.

Mrs. Maybrick is reported well out of danger and the government withdrawn the permit for her mother, Baroness De Roques, to visit her.

To verify the bills of dogs slaughtered by him, Kansas City's poundmasters must hereafter present the dogs' tails to the city clerk.

For \$800,000 Drexel, Morgan & Co., probably acting for the Vanderbilts, have bought 100,000 acres of West Virginia land rich in coal and timber.

The Queen's Carefulness.

Queen Victoria rarely sends any telegrams to any member of the royal family, or to Her Majesty's intimate friends otherwise than in cipher, a system of figure ciphers having been carefully arranged for her and their use.

Sir Richard Burton's Life.

The last pages of the life of Sir Richard Burton are being written by Lady Burton, and the work will soon be given to the public. It has been a labor of love, and has cheered the somewhat lonely life which Lady Burton lives in her little cottage near Mortlake.

A Grand Ceiling.

A splendid painted ceiling has just been finished by M. Georges Clairin for the foyer of the grand Theatre in Paris. It is full of graceful meaning, and delights the eye by the delicious colors in which the composition is expressed, but the puzzling thing is the figure of a dead woman who represents the drama. Perhaps this is an allegory.

AN ENGLISH FIGHTER.

The Light-Weight Pugilistic Champion in America.

Dick Burge, the English light-weight champion, recently arrived in New York, accompanied by his trainer and manager, George McDonald and S. Haggerty, the professional short-distance runner of England, who holds the record of 10.34 for 100 yards. Burge's appearance was the subject of much favorable comment by those who saw him. He is a likely looking fellow, of a very gentlemanly and modest bearing. To the casual observer he looks more like a successful business man than a fighter. He stands 5 feet 7 1/2 inches tall, and weighs at present 154 pounds. His shoulder development is very marked, and his limbs are well formed. His face is cleanly shaven and has a ruddy glow of health. He has sandy brown hair, and altogether has a very intelligent look. His countenance bears telltale marks of many battles he has engaged in. His last fight was with Ike Thompson, whom he defeated. In more than one respect he is a counterpart of Pat Cahill, the ex-amateur middle weight. Burge is 26 years of age, and has been fighting eight years. George McDonald, Burge's trainer and manager is well known here. He had Sam Blakelock under his wing while the latter was in this country. Burge said in reply to a question, "I have come to this country to fight McAuliffe. He is the acknowledged champion of America. I want to win the championship of the world. I can do that only by whipping McAuliffe."

Jack McAuliffe, champion light-weight says he will accept the offer of the Crescent City Club of New Orleans to fight Burge, but that the date will have to be set after his theatrical engagements to fight in March.

Domestic Measurements.

Soft butter the size of an egg weighs one ounce.

Four teaspoonfuls are equal to one tablespoonful.

One pint of coffee "A" sugar weighs twelve ounces.

One pint of best brown sugar weighs thirteen ounces.

One quart of sifted flour (well heaped) weighs one pound.

Two teaspoonfuls (level) of granulated sugar weigh one pound.

Two teaspoonfuls of soft butter (well packed) weigh one pound.

One and one-third pints of powdered sugar weigh one pound.

One pint (heaped) granulated sugar weighs fourteen ounces.

Two tablespoonfuls of powdered sugar or flour weigh one ounce.

Two teaspoonfuls (Well heaped) of coffee "A" sugar weigh one pound.

Two and one-half teaspoonfuls (level) of the best brown sugar weigh one pound.

### JINGLES OF HUMOR.

A Little Nonsense Gathered for Leisure Reading.

The Princeton boys put up a very, very "yellow game,

They got laughs and blows and bruises not a few;

And 'tis rumored that their college colors they are going to change;

Hereafter they'll be—"yellow, black and blue."

Why did you stop buying milk of me? asked a dealer of an old customer.

Because I'm a man who never takes water.

Judge—What is this man charged with?

Officer—Electricity. Your Honor. He stole a battery.

Showter—Why do you drink that fiery whiskey? It don't quench your thirst does it?

Hennessey—Quench it? Well I hope not!

Money has some human characteristics it talks and gets tight.

Hopkins is a fool. He took out an accident insurance policy before going on a railroad journey.

Well, that's right.

But this was a Southern railroad, four miles an hour.

Well, but confound it, the cows keep climbing into the rear car and hooking people, don't they?

Confused Stranger—What is the name of this street?

Citizen—Well, on this side it is called Tremont Row; on the other side is Court street; and in the middle of the street it is Scollay square. You can take your choice.

The harness manufacturer is the only successful rein maker.

I am not a scientist, said the shoemaker, but I do try to keep track of the sole-a-system.

You are charged, sir, said the police magistrate, with attempting to kiss this woman on the street. Do you plead guilty or not guilty? Your Honor, replied the blue-eyed prisoner, taking a good look at the prosecuted witness, I plead insanity.

I understand that you think your wife made a mistake in marrying you, said Brownly to Yellowly the other day.

Who says that? said Yellowly bristling up.

Why, somebody told me that you said she was a splendid woman, one of the kind of women who deserve good husbands.

Watts—What's the matter with Braggs? He walks around with his nose away up in the air and won't look at any one.

Potts—He sprained his neck looking for the comet.</
