ON DAIRYING.

A Practical Discussion by a Practical Man.

For the benefit of those who are interested in Dairying, I write a short article concerning the Dominion Dairy School held at Sussex, N. B. There were two courses, the first one commencing March 31st and closing April 10th; the second opened on April 14th and closed on the 24th inst. The school was under the supervision of Prof. J. E. Hopkins, who, with the assistance of Mr. John Robertson looked after the manufacturing of the cheese, while Mr. H. Mitchell and myself had charge of the milk testing department. Mr. Hopkins is one of Prof. J. W. Robertson's staff and is now in charge of the Nappan, N. S., dairy station. He is a thorough cheese and butter-maker and is an excellent instructor. The first course opened with 36 pupils in attendance who were from different parts of N. B. and Nova Scotia. I am sorry to say that our county was not represented at all, and under the circumstances we are forced to draw one of two conclusions, either that they who attended last year learned all that was to be learned, or, that circumstances prevented them attending. During the first course 24 lectures were delivered by the staff in the evenings on cheese making, milk testing, handling of over-ripe, tainted, gassy milk, &c. The class was divided in two parts and changed alternately from cheese making to milk testing every other day. In this way both departments were carried on at the same time. The second course opened with 24 students enrolled, part of them being ones who had taken the first course. Butter was made on a few occasions, from cream that was separated from some of the milk coming to the factory. The Separator used was a Standard Russian which was sent from Brockville, Ont., by D. Derbyshire to be used expressly by the school. By having this it made a complete course, and those who wished instructions on Separators and Separation received it. The students all expressed themselves as being well satisfied with the instruction they received, and good results must necessarily follow. The time has arrived when nothing but strictly first class cheese and butter is wanted and must be had if we expect to compete with other places where fine goods are made. When we put fine goods in the market, we get fine prices, and the only way to get the fine price is for us as cheese and butter-makers to acquire all the knowledge attainable. The dairy industry is one that requires skill and good judgment, and unless the makers keep in touch with all the new points and put them in practical use, they will certainly not be in this great race very long. The time was when almost any kind of cheese and butter could be put on the market and sold at a fair price, but times have changed and people are more particular what they eat, then a few years ago. There was not enough cheese made in this province to supply the local markets in fact over half the cheese that was eaten was imported from Ontario. Today this is not the case. We are not only able to supply the local market but we ship considerable to the old country. Now in shipping to the old country it puts us in a position where we have to compete with Ontario, Quebec, New Zealand and other countries, and as long as we send second class cheese we will receive a second class price. The object of this dairy school is to further promote the dairy interest in this province and thereby make the makers to manufacture a more uniform article, and to induce if possible, the paying for milk according to the per cent of fat the milk contains. The way this part is conducted at the present time in the greater part of the province is by the pooling system and the patron who sends milk containing 4 or 5 per cent. of butter fat only gets as much for his milk as his neighbor who perhaps sends milk containing only 3 per cent. of fat, when the 4% milk is actually worth from 15 to 20 cents per hundred lbs the most. Now any reasonable person considering the fact will readily see the justness of it, and when milk is brought in this way it has a tendency to not only increase the quality but to generally improve the milk sent to the factory by better care being taken of it. The success of the dairy industry depends on the cost of production and the quality of the goods that are put upon the market, and I believe that the farmers and dairymen of this province can put themselves in a position to produce their dairy products as cheaply and manufacture as fine an article as any country in the world for we have good land, as good a climate and the finest water that can be found in the world today.

J. F. TILLEY.

Catarrh Cured for 25 Cents.
Neglect cold in the head and you will surely have catarrh. Neglect nasal catarrh and you will as surely induce pulmonary diseases or catarrh of the stomach with its disgusting attendants, foul breath, hawking, spitting, blowing, etc. Stop it by using Dr. Chase's Catarrh Cure, 25 cents a box cures. A perfect blower enclosed with each box.

The Need Of The Hour.

If ever there was a period in the history of Canada when it was of vital importance to send our best men to parliament—men of brains and gifted with the utterance of speech—men of independence of character and of undoubted patriotism, it is the present moment. A crisis in our affairs is approaching; political and religious feeling is being aroused to a dangerous pitch; a manifest uneasiness is apparent in financial and commercial circles; the public debt is increasing, trade is languishing, and our population is steadily drifting away to other fields of labor.

It is time to cry halt. It is time that electors of independent thought and ideas should buckle on their armor and assert their manhood, refuse to bow down to the shibboleth of party, but taking the mandate in their own hands should exercise it freely and wisely, and send men to Ottawa who are prepared to place country before the exigencies of party. Hitherto this has not been the rule either with Liberals or Conservatives. Every interest has been subordinated to that of party. Party has been put first, qualification last. This is the reason why we have so many voting machines, as Bystander calls them in the House of Commons and in the Senate Chamber. Some of these men have no more right to a seat in parliament than they have to a seat on the workbench. Still they are the chosen of the free and enlightened electorate; they serve nominally on a few committees, they vote religiously as they are directed to do, they draw their indemnity complacently (including mileage and railway transportation), and they lay the flattering unction to their souls that they have done the state a service! Truly, it is only a step from the sublime to the ridiculous.

Undisputedly the country must be governed by party. We recognize this fact perfectly. Either the Conservatives or Liberals must rule. But this is no reason why inferior men should be chosen on either side, or why the rank and file of a party should be the subservient instruments of their leaders, without spirit enough to exercise their voice, or vote independently when occasion demands. Let the best men go to parliament, whether they be Liberals or Conservatives. We don't go quite so far as Bystander and assert that eloquence is an absolutely essential qualification of a candidate, for oratory is not a universal gift, and many able men are denied its power, but a member should certainly possess a high degree of intelligence, sound convictions and sufficient stamina to express himself intelligently in Committee if not in the House at large.

The time is upon us when all constituencies must select their candidates. It will be well if the electors see to it that the primary qualifications outlined above are insisted upon.—St. John's, (P. Q.) News. (Ind.)

A Child Cured of Eczema by Chase's Ointment.

"My six-year old daughter, Bella, was afflicted with eczema for 24 months, the principal seat of eruption being behind her ears. I tried almost every remedy I saw advertised, bought innumerable medicines and soaps, and took the child to medical specialists in skin diseases, but without result. The doctor advised the use of Chase's Ointment, and since using the eruption has all disappeared, and I can confidently say my child is cured. (Signed) MAXWELL JOHNSTON, 112 Ann St., Toronto.

A Ships That Pass Story.

In travelling recently I chanced upon a typical "Ships that Pass" story, that seemed to me too weedy human and sympathetic to be allowed to pass into oblivion.

Living in a little western town several years ago was a tender-souled mother whose only son developed at an early age a beautiful voice and marked musical ability. Through the influence and assistance of some friends, she was persuaded to allow him to go to London for study where his voice and talent soon won for him a position among the choir boys in one of the leading cathedrals.

In course of time, however, came a long interval during which the mother heard nothing from her beloved son, and in consequence became a prey to the most deadly fear and anxiety. Knowing no one in London to whom she could appeal, her mind instinctively turned in this soul stress to the one great heart in England that for years had stood to her for all that was most noble, strong, fine, womanly and sweet. So in a perfectly simple way she wrote a letter to George Eliot, stating the details of the case and giving the last known address of her son, lodgings, addressing the letter simply, London, England. This artless appeal did not fail to reach its destination, and George Eliot lost no time in hunting up the homeless youth, though she failed to find him at the address given. She traced him, however, from place to place until she came upon him ill and forlorn among entire strangers; and to him her coming seemed like the shadow of a great rock in a weary land.

The humane and sympathetic woman had the friendless boy taken immediately to her own home in Chelsea, where he was nursed and cared for until restored to health. She, of course, wrote at once to relieve the anxiety of his mother, and provided ways and means for her to come to England and visit her boy. But by the time that the grateful mother had made the long voyage, her son's noble benefactor had gone to join the "Choir Invisible."

The Lewes sons, however, had become so interested in the youth, and were so pleased with the character of the mother's letters and her naive sweet faith in the power and love of their mother, that they continued to look after the boy, and extended to the unknown American upon her arrival on foreign shores every possible kindness and courtesy, not the least of which was bestowing on her in memory of the experience, a beautiful pearl pin that had for many years adorned the foremost woman of their time—if not at all times.—D. D. in Ex.

Shrinkage of Frame Houses.

Methods of wooden construction should always be adopted in the erection of frame houses that will obviate shrinkage, and while there may be no construction that will entirely obliterate the fact that shrinkage exists in all new work the method which comes nearest to doing away with the unsightly cracks and settling is preferred. This is a theme well known to all practical builders and they all know how to get around it, but the young mechanic has much to learn in this line, and by working alongside a good practical man much can be learned. Keep your eyes open and also your ears. Do your own reasoning and thinking and do nothing but what you figure out the real reason therefor, and you will then do all things with a purpose that will lead you into paths of good work and good methods, and you will then be better able to do good work than bad and thus acquire a reputation that will always bring business and good pay.

THE BEST SPRING

[- MEDICINE -]

IN THE WORLD

—IS—

HOLLOWAY'S

RED BLOOD

SYRUP

The Great

English Remedy!

It is a never-failing Blood Builder, and Nerve Restorer. It is recognized wherever introduced as one of the greatest discoveries of the age, and perhaps has done more for human suffering than any other similar preparation. Its component parts have been recognized by all leading physicians and chemists as being essential to the existence of the body. Disease flies from it like magic, and when used as directed it is an unfailing remedy.

Now is your time to battle against disease. Those that have been fighting with some nervous disease, impure or poisoned blood, or incipient consumption, take the friendly advice of those who have been similarly situated, and who are now in the full bloom of health and vigor.

Buy a Bottle of the Great Holloway's Red Blood Syrup, take it faithfully and before you have taken it three or four days your condition will improve, your appetite will be better, your eyes will be brighter, showing the wonderful effects of that great compound.

Holloway's Red Blood Syrup is not a cure for all. But in the cases in which it is recommended to be used, it is unfailing. So marvelous quick is its action, and so certain are the benefits to be derived by its use, that in all cases where the Syrup has been used for one week, and purchasers are not satisfied with its results, the money will be refunded.

Ask your druggist or dealer for Holloway's Red Blood Syrup, and do not be persuaded to take any other preparation.
