**UPPER WOODSTOCK.**

### In The Ocean's Depths.

The temperature at the bottom of the ocean is nearly down to freezing point, and sometimes actually below it, says the Nineteenth Century. There is a total absence of light, as far as sunlight is concerned, and there is an enormous pressure, reckoned at about one ton to the square inch in every 1000 fathoms, which is 160 times greater than that of the atmosphere we live in. At 2500 fathoms the pressure is thirty times more powerful than the steam pressure of a locomotive when drawing a train. As late as 1880 a leading zoologist explained the existence of deep-sea animals at such depths by assuming that their bodies were composed of solids and liquids of great density, and contained no air. This, however, is not the case with deep-sea fish, which are provided with air-inflated swimming bladders. If one of these fish, in full chase after its prey, happens to ascend beyond a certain level, its bladder becomes distended with the decreased pressure, and carries it, in spite of all its efforts, still higher in its course. In fact, members of this unfortunate class are liable to become victims to the unusual accident of falling upward, and no doubt meet with a violent death soon after leaving their accustomed level, and long before their bodies reach the surface in a distorted and unnatural state. Even ground sharks, brought up from a depth of no more than 500 fathoms, expire before they gain the surface.

The fauna of the deep sea—with a few exceptions hitherto only known as fossils—are new and specially modified forms of families and genera inhabiting shallow waters in modern times, and have been driven down to the depths of the ocean by their more powerful rivals in the battle of life, much as the ancient Britons were compelled to withdraw to the barren and inaccessible fastnesses of Wales. Some of their organs have undergone considerable modification in correspondence to the changed conditions of their new habitats. Thus down to 900 fathoms their eyes have generally become enlarged, to make the best of the faint light which may penetrate there. After 1000 fathoms these organs are either still further enlarged, or so greatly reduced that in some species they disappear altogether and are replaced by enormously long feelers. The only light at great depths which would enable large eyes to be of any service is the phosphorescence of deep-sea animals.

We know that at the surface this light is often very powerful, and Sir Wyville Thomson has recorded one occasion on which the sea at night was 'a perfect blaze of phosphorescence, so strong that lights and shadows were thrown on the sails and it was easy to read the smallest print.' It is thought possible by several naturalists that certain portions of the sea bottom may be as brilliantly illumined by this sort of light as the streets of a European city after sunset. Some deep-sea fish have two parallel rows of small circular phosphorescent organs running along the whole length of their bodies, and as they glide through the dark waters of the profound abysses they must look like model mail ships with rows of shining portholes.

### A BOON FOR EVERY HOME.

Every Wise Woman Should See That  
She Gets the Best.

In special cotton colors the Diamond Dyes far excel all other dyes. These special cotton dyes are recent discoveries of the best dye chemists in the world, and are remarkable for fastness against exposure to strong light and for standing any amount of washing with soap.

Special attention is directed to Diamond Dye Fast Black for Cotton and Mixed Goods. This marvellous black has proven its title to first place as a dye for all cotton and mixed goods. It excels all rivals in every good quality. One package of this dye will do as much work as three of any other make of dye.

The Diamond Dyes are first, best and the cheapest to use.  
Tell your merchant that you must have the "Diamond."

### Gold, and its Uses.

If the average reader or thinker will devote a few minutes to the subject of gold and its uses, and how much of it annually disappears by wear, leaving no possible trace, he will find himself involved in some extremely interesting calculations. If some genius would only invent a power strong enough to attract to it the millions of invisible particles that have, and are constantly being, worn off the various articles composed of that metal, what an immense amount would be recovered!

Where do these particles go! Here, there, everywhere; in your house, on the streets, in the banks, business houses, stores, and wherever man goes. As an instance of this the following is cited: There is at present a veritable gold mine being worked in an old watch case factory in Brooklyn. It occurred to the new purchasers of this property that during the long years of manufacturing of gold watch cases that took place there, a large quantity of gold particles must have been absorbed by the flooring, walls, furnace, chimney, etc. So they went carefully to work tearing the old building down bit by bit, and burnt and crushed the material,

afterwards assaying the ashes. So far something like \$50,000 has been recovered. Say an ounce of this lost gold were recovered. If we melted it down and gilded a fine silver wire it would extend more than thirteen hundred miles; or if nineteen ounces were recovered (which in the form of a cube would be about one inch and a quarter square), it would gild a wire long enough to compass the whole earth like a hoop.

If you pick up a gold leaf, such as is used for gilding purposes, it becomes a curiosity in your eyes when you realize that seventy-five square inches of it weigh only one grain. Now the thousandth part of a line, or inch, is easily visible through a common pocket glass. Hence it follows that when gold is reduced to the thinness of gold leaf 1-50,700,000 of a grain of gold may be distinguished by the eye. But it is claimed that 1-1,400,000 of a grain of gold may be rendered visible.

Large quantities of gold are used in gilding portions of exteriors of public and private buildings. For instance, if we take the Church of St. Isaac at St. Petersburg, we find that it required the use of 247 pounds of gold to gild its five crosses. They can be seen glittering at a distance of 27 miles—Harper's Round Table.

### Chase's Kidney-Liver Pills.

Chase's Pills have gained popularity because they are a specific for the uric acid condition, prevent Bright's disease, cure Rheumatism and all Catarrhal conditions of the Kidneys and Bladder. They do this because they possess remarkable alterative, tonic and diuretic properties, exerting a wonderfully soothing influence on irritated or inflamed mucous membranes of the kidneys or bladder. One pill a dose. 25 a box. The cheapest medicine in the world.

### The Bubonic Plague.

Some exaggeration must be allowed for in the reports of the outbreak of black plague at Bombay, in India. The population of Bombay is about a million, and the plague is only serious in the lower and filthy part of the town. So far the deaths are under 4,000, and out of the larger European population only three deaths have occurred. The Toronto World in an article on the outbreak says it is agreed by medical men that the bubonic plague now epidemic in Bombay is the same as that which has from time to time devastated Europe and the East, especially during the middle ages. The celebrated "Black Death," which ravaged all Europe in the 14th century, had its origin in the East and was undoubtedly the same disease as that which now prevails in Bombay.

The last visitation in England was in 1665. The disease is called the bubonic plague, from the fact that it attacks the lymphatic glands in the neck, arm pits, groins and elsewhere in the body. It is a specific disease, depending on the reception into the body of a specific organic contagion. It is transmitted by means of miasmata, given out by the bodies of the sick. The early symptoms are sometimes like those of ague, but combined with nervous symptoms. The patient becomes distracted and dazed, giving the appearance of one intoxicated. There is severe headache and intense thirst. Glandular swellings are observed in all but the rapidly fatal cases. Most persons who survive the fifth day of attack get well, but recovery is slow. The plague is the most fatal of the diseases that attack large numbers of people.—Ex.

### Catarrh Cured for 25 Cents.

Neglect cold in the head and you will surely have catarrh. Neglect nasal catarrh and you will surely induce pulmonary diseases or catarrh of the stomach with its disgusting attendants, foul breath, hawking, spitting, blowing, etc. Stop it by using Dr. Chase's Catarrh Cure, 25 cents a box cures. A perfect blower enclosed with each box.

The American girl stood gazing contemptuously at the much-boomed City of Pompeii. "Humph!" she exclaimed, disdainfully, "and is this the place I have travelled five thousand miles to see?"

The guide began to descend upon the beauties of the ancient city, but, catching her crushing glance he ceased.

"Wny, man," she almost shrieked, "the place is as shabby-looking as Brooklyn!"—New York World.

To prevent the hardening of the subcutaneous tissues of the scalp and the obliteration of the hair follicles, which cause baldness, use Hall's Hair Renewer.

"Imperious Caesar, dead and turned to clay,  
Might stop a hole to keep the wind away;  
But when it comes to patching up a tire,  
'Tis rubber, not dead Romans, we desire."  
—Chicago Record.

"What is your brother Reginald doing since he left college?"  
"Why, just at present he is very busy tracing back our family tree."  
"Goodness me! Then he's got that Darwinian theory in his head, has he?"—Truth.

## Keep on Coughing

If you want to. If you want to cure that cough get Ayer's Cherry Pectoral. It cures coughs and colds.

### HAD INDIGESTION!

For a Matter of Some Forty Years or More.

Joseph Gardner, stove dealer, of Bath, Ontario, is a great believer in Dr. Chase's Kidney-Liver Pills for indigestion, constipation, dyspepsia, Bright's disease, rheumatism, and kidney, liver and stomach troubles generally.

"I was troubled for over forty years with indigestion and constipation," he writes. "At intervals I suffered from severe headache. I spent dollars and dollars without result until Mr. Bal, our druggist, advised me to try Chase's Kidney-Liver Pills. I did so, and must say that they are the only remedy that gave me relief. I would not be without them for anything."

Many people suffer from rheumatism. Bad blood and diseased kidneys bring it on. Dr. Chase's Kidney-Liver Pills will remedy all this and cure rheumatism, sciatica and all kindred complaints. Here is a sample case:

"My boy was all crippled up and suffered awfully with 'rheumatism,'" writes Mrs. H. Wills, of Chesley, Ont. "He also had a touch of diabetes. The doctors could do him no good, but Dr. Chase's Kidney-Liver Pills completely cured him."

Sold by all dealers and Edmanson, Bates & Co., Toronto. 25c.

When all other remedies fail Dr. Chase's Laxative and Turpentine will cure the worst chronic cold. 25 cents.

### EQUITY SALE.

There will be sold at Public Auction at the front of the Post Office, in Kings Ward, in the Town of Woodstock, in the County of Carleton, on Tuesday, the Ninth Day of March, A. D. 1897, at the hour of Twelve o'clock, noon, pursuant to the directions of a Decreeal Order of the Supreme Court in Equity, made on the First day of December, A. D. 1896, in a certain suit therein pending, wherein John W. Beggs was plaintiff, and William Henry Post and Annie Post his wife, Arthur B. Demerchant and Margery Demerchant his wife, and Frank E. McNally were defendants, with the approbation of the undersigned Referee in Equity for the County of Carleton, the lands and premises directed to be sold by the said decreeal order, the lands firstly described therein to be sold first, and described as: "All that certain piece or parcel of land situate, lying and being in the Parish of Wicklow in the County of Carleton, being the lands and premises mentioned in Item number two of the last Will and Testament of Isaac Post, late of the Parish of Canning in the County of Queens, deceased, which said lands are described in the said item number two of the said will as follows:—the piece or parcel of land situate in the Parish of Wicklow, County of Carleton and Province aforesaid, being twenty rods on the lower side of a block of land that I purchased on the fifth day of August, one thousand eight hundred and sixty-four, from Charles Simonds and Sarah his wife, bounded on the lower or southerly side by lands owned by Charles McMullin, on the front by the river Saint John, on the upper or northerly side by lands owned and occupied by Abraham Post, being twenty rods from front to rear of said block of land, containing fifty acres more or less, which said lands are at present bounded on the lower or southerly side by lands occupied by Frederick H. Hale, on the front by the river Saint John, on the upper or northerly side by lands occupied by George White, together with all buildings and improvements thereon and appurtenances to the same belonging or in any wise appertaining. And if the proceeds of such sale be not sufficient to pay the amount assessed to the plaintiff and directed by the said decree to be paid to the said plaintiff and his costs of suit, and costs of the defendant Frank E. McNally, the undersigned referee will then immediately after the sale of the above described lands at the place of sale aforesaid sell the lands secondly described and directed to be sold by the said decreeal order in accordance with the directions of the said decreeal order, which said lands are described in the said decreeal order as follows: "All that certain piece or parcel of land and premises situate lying and being in the said Parish of Kent in the County of Carleton and bounded and described as follows: commencing at a cedar stake near the road leading to Beechwood Siding and directly in front of the said Annie Post's House, thence easterly along the said road eight rods to another cedar stake, thence north-westerly, about four feet east of a row of apple trees recently set out thirteen rods to another cedar stake, thence south-westerly parallel to the said road eight rods to another cedar stake, thence south easterly parallel to the before mentioned row of apple trees twelve rods and eleven feet to the place of beginning and containing three fifths of an acre more or less. Together with all and singular the buildings and improvements thereon and appurtenances to the same belonging or in any wise appertaining. For terms of sale apply to plaintiff's solicitor. Dated the twentieth day of December A. D. 1896.

STEPHEN B. APPELBY,  
Referee in Equity.  
C. E. DUFFY,  
Plaintiff's Solicitor,  
Fredericton, N. B.
