BANK OF ENGLAND NOTES

And the Way They are Made--Secrets Religiously Guarded.

If you are a privileged visitor in the Bank be shown to you is a tramed bank note more than two centuries old. This rote, which bears the date "19 day of XXber, 1699," and is signed by Thomas Madock, the "Horace Bowen" of that remote day, bears for us." quite a strong casual resemblance to its crisp and coveted successors of our own time.

If we examine it, however, we shall find many differences on the face of it. To begin with, it is for the unusual sum of £555; the date, number, amount and signature are all in writing; and written across its face are notes of a repayment of the £555 in three installments.

But between this, the oldest known Bank of England note, and the notes of today, in spite of the superficial resemblance even to the water mark, there is almost as great an essential difference as between Stephenson's "Rocket" and the latest marvel of modern locomotives. In fact, it would be difficult to name a more remarkable product of human ingenuity than the crisp oblong of paper known as a Bank of England note.

Let us in imagination, since for once we can dispense with permission, take a peep into that most wonderful of all printing rooms in the "Old Lady's Palace" in Threadneedle street, where these magic notes are produced at the rate of 18,000,000 a year; and where it would be quite possible in a single day to make money enough to pay our year's national expenditure.

Here we see, arranged in line, six innocent looking printing machines-marvels of mechanism and of cost, it is true, but no more remarkable in appearance than scores which may be seen elsewhere in London. And yet each of these machines can and often does print 25,000 notes a day, or an aggregate of 150,000 notes a day for the six machines. Make each note £1000; and in eight hours these ordinary looking machines will have coined for us £150,000,000 of money.

Each machine is a detective as well as a

certain point of view, to be the best. They are less disturbed by care and the world. We begin to understand that things really never did matter so much as we supposed, and we are able to see them more in their of England, one of the most interesting of true proportion instead of being overwhelmed the many curiosities and treasures that will by them. We are more resigned to the will of God, neither afraid to depart nor overanxious to stay. We cannot see into another life, but we believe with an mextinguishable

hope that there is something still reserved

- A man cannot become young by overexerting himself.
- A man of sixty should lead a quiet, open air life.

He should collect the young about him: He should set other men to work. He ought at sixty to have acquired authorty, reticence and freedom from personality. He may truly think of the last years of

life as being the best, and every year as better than the last if he knows how to use it. A MARVELOUS

SPRING HEALTH GIVER AND INVIGORATOR.

Paine's Celery Compound Purifies the Blood as Nothing Else Can Do. It Nourishes the Tired Brain and

Braces the Weak Nerves.

Paine's Celery Compound purifies the blood as nothing else can do; it is nature's brain food; it builds up weak and shattered nerves; it is the world's best and surest health-giver.

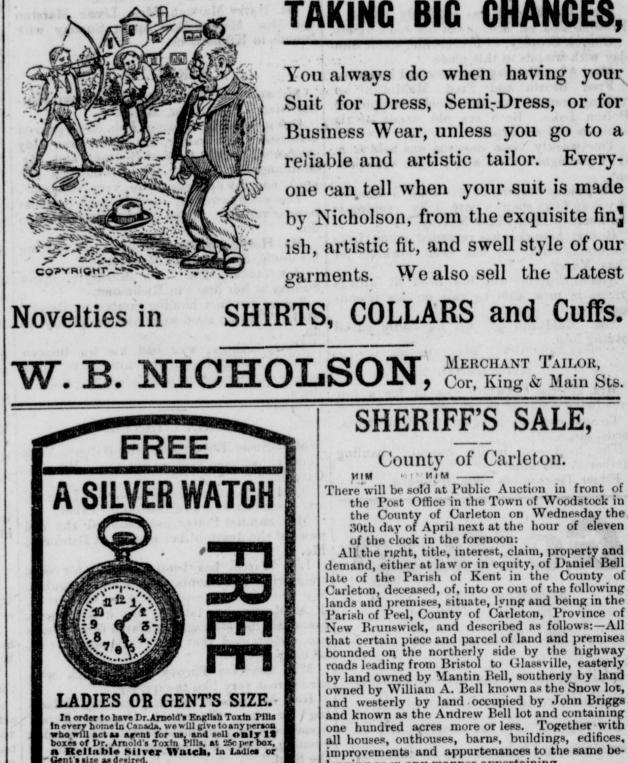

Paine's Celery Compound taken during the opening of spring has a remarkable efficacy in making sick people well and strong. It makes short work of debility and nervous exhaustion. It quickly drives out neuralgia, rheumatism, sleeplessness and dyspepsia printing press, and no one may tamper with from the system. Its virtues promptly bantsh it with impunity. If you were tempted to kidney disease and liver troubles. It enables all weak and rundown men and women to print a couple of notes for your own purse cast off their besetting troubles and gives directly saved by use of Paine's Celery Compound after other medicines had failed to do o turn out, and it would declare that too any good work, writes as follows: any had been produced. These machines are fed from bales of teen years ago had an attack of rheumatic sheets, each bale containing 500 sheets, fever. While recovering I took a cold and had a relapse which ended in inflammatory rheumatism, and I was laid up for years.] was also afflicted with sleeplessness, and my too many or too few, and each sheet, which doctor said I would not live to see my thirtieth year. While almost giving up in despair your Paine's Celery Compound was recommended to me. I bought a bottle and used it, and to my surprise it gave me natural sleep and rest. After using six bottles I was entire-Each sheet, too, is such a marvel of skilled ly cured. My wife also used your medicine for insomnia, and before she used one whole bottle was entirely cured." Mr. Jas. Wilson, a prominent Goderich druggist says: "I know Mr. Beck intimately, and can vouch for what he says about Paine's Celery Compound.'

MODERN KITCHEN UTENSIL. SARGENT'S Gem Food Chopper.

What It Chops.

It chops raw meat, cooked meat, all kinds of vegetables and fruit, bread, crackers, cheese, nuts, and many other articles used in making substantial dishes and dainty desserts. Every housekeeper knows the many articles of food which have to be chopped, some before they are cooked and some after. We want every housekeeper to know that Sargent's Gem Food Chopper will be a great help in her daily work. Call at our stores-Woodstock or Centreville, and see the Choppers, or write us tor circulars.

(all notes are printed in couples) the machine them a happy and vigorous life. Mr. Charles would inevitably betray you, for it records E. Beck, Goderich, Ont., whose life was on dials at its side every note that it deigns to turn out, and it would declare that too many had been produced.

which are so frequently counted and checked that there is no possibility of there being one is five inches wide and 16th inches long, is converted into two notes; each bale of sheets thus represents 1000 notes, and it is capable of being converted into £1,000,000.

manufacture that it defies imitation. For nearly two hundred years the paper has been made by a secret process at the Leverstoke paper mill in Hampshire, which now produces as much as 14,000 reams a year. In spite of its thinness, it is so strong that it will support a weight of half a hundred dead-

weight without tearing; and it is so cunningly made that no two parts of it are of equal thickness. Its very whiteness is a secret composition, in which naphtha smoke figures conspicuously. The water-mark, which was at one time

produced by hundreds of wires sewn together, is now produced by plates of sheet brass, from which the pattern is stamped out by a steel-faced die.

The same secrecy that is observed in manufacturing the paper from which these millions of notes are produced annually guards every stage of their production: the dies themselves from which the notes are printed being made entirely in the bank in Threadneedles-treet. As explained, Bank of England notes are always printed in pairs. Each sheet is then cut in two thus leaving each note with one clean cut and three rough or "deckled" edges, a peculiarity which puzzles many who are ignorant of this simple explanation. It will be observed, too, that on many notes—in fact, on half the notes issued, the top righthand corner has the appearance of having a piece of the paper rubbed off. This is done with each sheet when in a state of pulp, so that the printer may know when the water-mark is right side up.

Every day these notes return from their wanderings (in one remarkable case covering 111 years) to the bank, when each one is cancelled by having the corner containing the ignature cut off, and its return is duly noted in the bank registers; but, fast as they return, the supply never fails; for in its strong room there are always millions of notes of an aggregate value of £80,000,000 ready to take the place of those that have come back to the fold.

THE IMMENSE PINES OF CANADA furnish the basis for that peerless cough and cold remedy, Pyny-Balsam. It cures quickly and certainly. Of all druggists, 25c. Made by proprietors of Perry Davis' Pain-Killer.

Making Fire.

Mr. Charles F. Lummis declares that the greatest invention ever made by man was made by that unnamed savage who first rapped two accidental stones together, and saw a spark. Writing in "The Land of Sunshine," Mr. Lummis says that he has known men who handle hundreds of thousands of their fellows' money, go all day or all night shivering in camp, because no one had a match. So subservient have we become to a sorry little splinter with a grain of phosphorus on its tip !

It was only in 1805 that fire began to be made by chemistry. All one needed, after Professor Chancel of Paris, was a bottle of asbestos saturated in sulphuric acid, and some pine splints dipped in sulphur and tipped with chlorate of potash and sugar.

Friction matches date only from 1829, when Walker began making his "Congreves," a shilling for a box of eighty-four with a piece of sandpaper to scratch them on. The modern match with its safer form of phosphorus came along in 1845.

My father, born in 1825, was telling me few months ago how he had to light the fire in Maryland. They had the old tinder box, a round tin holding a charred linen cloth and with a tight cover to smother the linen again. Into this tinder he struck sparks with the flint and steel, and when it "bit" he touched it to a cedar splint he had split and tipped with sulphur. That is the way we built the morning fire within the memory of one still useful in America. How many breakfast fires would be lighted tomorrow if tonight every other facility were removed, and beside each stove were placed the tinder-box and flint and steel and sulphur dips?

ARNOLD MEDICINE CO., Dept W. 4 Toronte

It might be supposed that English-speak ing people would not venture to travel in a foreign country without some knowledge of its language; but our countrymen do so every year.

A lady relates that she was one of a party of English tourists that visited Madrid. She was the only oue of the number who knew any Spanish, and her stock was confined to "yes" and "no" and "milk." By means of sestures they managed to get along the first fternoon and night.

The next morning, at breakfast, there was coffee but no milk, and the party appealed to the lady to get some. To her dismay she forgot the word for milk, and after striving in vain to recall it she seized a piece of paper

and pencil and drew the picture of a cow. The waiter examined the drawing critically, went out of the room, and returned prompty with a bundle of tickets for that day's bull-

ARE YOU DEAF? All deafness is not curable, but doctors state that ninety per cent. of impaired hearing is due inflammation of the Eustachian tubes, and can be treated with certainty of success by Catarrhozone, which gives instant relief to Catarrh in any part of the system. Catarrhozone is extreme-ly pleasant and simple to use, and sufferers from any form of deafness are advised to use it. Thousands of cases are on record where rhozone has perfectly restored lost hear-
