Some Ambiguous Adjectives.

The other night at the banquet of Wisconsin Educational Club of Milwaukee's Chauncey Depew made a hit with the recital of a list of want ads., from which he permits me to quote:

Wanted—An experienced nurse for a bottled baby.

Wanted—Furnished apartment for a gentleman with folding doors.

Wanted—A room by two gentlemen about thirty feet long and twenty feet broad.

Wanted—By a respectable girl, her passage to America, willing to take care of children and a good sailor.

Wanted—An organist and a boy to blow same.

Wanted—A boy to be partly outside and partly behind the counter.

Wanted—Good boys for punching.

Wanted—A young man to take care of horses of a religious turn of mind.

Lost—A collie dog by a man on Saturday, answering to Jim with a brass collar around his neck and a muzzle.

Lost—Near Highgate Archway, an umbrella belonging to a gentleman with a bent rib, and a bone handle.

For Sale—A pianoforte, by a gentleman with carved legs.

This collection is declared to have been made up bona fide, of clippings from English papers. They reminded Mr. Johnston of a number of local freaks, such as the famous Expo. ad. wherein the management offered to "give away a mahogany lady's writing desk." Also want ads., such as these: "Lost—A yellow lady's satchel"; and "Wanted—A boy to deliver oysters that can ride a wheel."—[Milwaukee Sentinel.

Feeding Calves.

With reference to feeding calves, I think a prolific source of difference of opinion is difference in breeds. The proper course for one will not do for another. For instance I have a full-blooded Holstein and a Jersey penned side by side. The Holstein will take three and one half quarts of milk and be for more, and also eat ground oats and hay. The Jersey's stomach would be upset with more than half that; this at two weeks of age and a large difference in size.

I have had some experience, but never knew how to feed until I ceased to depend on hired men, and gave strict attention to calf nature, which I find can only be known by practice and applied through the eye. Old rags, pieces of sacking, should be kept close at hand. As soon as the calf is dropped throw a large sack around it and carry to the pen, and rub off. Cover over with large blankets to keep warm.

About twelve hours after, give one quart of mother's milk, second milking, she having been milked clean at time calf was dropped, or before is necessary to prevent inflammation. One quart is generally enough for a Jersey calf for several days—the actions and looks of the calf will suggest to the skilful feeder when and how much to increase, but never over a pint at a time.

Many calves are killed by overfeeding, especially the first rich milk of Jersey cows. If the calf loses appetite it is overfed. Have a can of powdered charcoal at hand and put a teaspoonful into a pint bottle of milk and give it. At two weeks begin to teach it to eat ground oats, dry. You may have to put some into its mouth a few times, but it will soon learn to eat.

Then, if you wish, you can begin to change from whole to separated milk, with a teaspoonful of oil meal porridge, one pint at a time, not changing oftener than four to six days. We have no more trouble in raising calves.—[Otsego County Correspondence Country Gentleman.

Alfondly 0149.

Fred D. Tweedie, of Centreville, still owns Alfondly, the celebrated Standard Bred Pacing Stallion, 0149. He will stand at owner's stable during the rest of April. From May 1st, he will stand at Mar's Hill, on Tuesdays, and at Bristol on Fridays, during the remainder of the time at the owners stable, Centreville. Parties at distance wishing to use the horse may make arrangements by writing to the undersigned.

FRED D. TWEEDIE,
Centreville.

EXECUTORS' NOTICE.

All persons indebted to the Estate of George Cowan late of the Parish of Wakefield, in the County of Carleton, deceased, are requested to make immediate payment to the undersigned, and all persons having just claims against the said Estate are required to present the same duly attested to Louis E. Young, Solicitor, Woodstock, N. B., within three months from the date hereof. Dated this twenty-second day of April, A. D. 1903.

THE SPRAYING OF ORCHARDS.

The Power Sprayer does Rapid and Thorough Work in Demonstrations Conducted by the Dominion Fruit Division.

The Fruit Division of the Dominion Department of Agriculture is just now giving a series of orchard demonstrations in Ontario and Quebec to illustrate the great advantages which follow the use of the power sprayer. During the past week work has been carried on in the vicinity of Woodstock and Ingersoll, Ont., by Messrs. P. J. Carey, Dominion Fruit Inspector, and J. C. Harris, West Oxford, both practical farmers who have made a success of fruit growing and who give careful attention to all the details of their spraying operations. The chief object is to show that a dozen or more farmers may profitably combine to purchase a power sprayer, place it in charge of some such man as usually does threshing, who can easily make himself thoroughly conversant with the best methods of spraying, and engage him to make regular visits to their orchards. At each farm the expert sprayer will only require the assistance of a teamster, and thus the regular work of the farm need not be interrupted. Under present methods every farmer in the fruit districts requires a spraying outfit of his own, and the spraying, if at all, is done in a careless half-hearted way by men who do not know just when or how the work should be performed. Farmers are very busy at the season when spraying should be done, consequently it is often neglected entirely, or postponed until too late to be effective.

Farmers have reason to feel indebted to Mr. W. A. MacKinnon, Chief of the Fruit Division, for bringing to their attention the merits of the power sprayer. If the old methods of spraying were valuable, and it is generally admitted that they were, this new plan must prove infinitely better. It is thorough and rapid, and is accomplished with little or no exertion or inconvenience. The pressure is supplied by a small gasoline engine on the wagon and the spraying done while the horses are driven up and down between the rows of trees. The liquid is forced from a tank on the wagon through two lines of small rubber hose. By the use of bamboo rods with a cluster of six small nozzles at the end it is possible to reach the topmost parts of the trees, and the spray, which is as fine as a cloud of vapor falls lightly upon the trees and adheres much better than if applied in a coarse spray as is sometimes done. The pressure of 80 to 100 pounds to the inch ensures a spray so fine that it penetrates to all parts of the trees. This is one of the chief advantages of the new sprayer. The difficulty has been to reach the tops of trees without a waste of the preparation used, which has been the invariable result when a heavy stream was turned on. Again the appliances used by most farmers have only one nozzle, while this, as has been stated, has six on each line of hose, and the force is much greater and the mist finer, which is all-important.

Under favorable conditions the operators of this machine could probably spray from 600 to 800 trees per day. Forty trees some of them difficult to get at, were sprayed in about twenty-five minutes; after making several moves a day, some of them long ones, the operators have been averaging between 400 and 500 trees a day. The trees sprayed will be given a regular course—four sprayings at least.

It is hoped by the Department of Agriculture that these tests will bring about the general adoption of the power sprayer. A similar spraying apparatus is being used by private owners in the Niagara district and is said to give excellent results.

The efficiency of the machine will shortly be increased, as it is the intention to use either nine or twelve nozzles instead of six on each line. Mr. MacKinnon is this week attending a public competition of power sprayers in the famous Hitchhags orchard near South Onondago, N. Y., in order to familiarize himself with the merits and demerits of the various machines now on the market.

It is contended that if farmers will only unite to carry out a systematic campaign of spraying according to the latest methods, a great deal may be done towards eradicating the enemies of fruit. Exporters who are familiar with the results of spraying and the systematic care of orchards, strongly endorse spraying, claiming that it is certain to improve the quality of the fruit, and in support of their claim they refer to orchards where the system has been carried out, the fruit of which always commands the highest price.

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Cresolene tablets, ten cents per box. All druggists

As some drivers of the Royal Artillery were at riding-drill one day, one of the drivers' horses bolted with him, and was making his way towards the stables when an officer met them.

"Where are you going?" inquired the officer.

"I don't know, sir!" shouted the driver, as he flew past. "Ask the horse!"

**A Giant
Entertainer.**

There is no instrument on earth can bring into a home the entertainment and enjoyment the Berliner Gram-o-phone does, because it is not only one instrument—but every one. It reproduces every sound with wonderful fidelity to the original.

**The Berliner
