**FOR SALE OR RENT.**  
 Two houses and store at Debec Junction, 12 mile  
 from Woodstock, 8 from Houlton on the C. P. R.  
 Best farming country, all round. Steam saw mill  
 and grist mill will soon be in operation, good water,  
 fishing, boating, &c. Grand chance for good doctor,  
 dentist, carpenter, shoemaker, blacksmith, mil-  
 liner, dressmaker or wide awake business men.  
 Inquire of DR. A. H. HENDERSON, Debec.  
 June 22nd-3mos.

# Consumption

The only kind of consump-  
 tion to fear is "neglected  
 consumption."

People are learning that con-  
 sumption is a curable disease.  
 It is neglected consumption  
 that is so often incurable.

At the faintest suspicion of  
 consumption get a bottle of  
 Scott's Emulsion and begin  
 regular doses.

The use of Scott's Emulsion  
 at once, has, in thousands of  
 cases, turned the balance in  
 favor of health.

Neglected consumption does  
 not exist where Scott's Emul-  
 sion is.

Prompt use of Scott's Emul-  
 sion checks the disease while it  
 can be checked.

Send for free sample.

## NOXIOUS WEEDS OF EASTERN CAN- ADA.

To Prevent Distribution.--To Destroy Com-  
 mon Varieties.

Weeds not only cause a great deal of un-  
 necessary work and annoyance during the  
 harvesting, threshing and cleaning of grain,  
 but they sap the very vitality from the plants  
 or crops grown. Impure seed, particularly  
 of grasses and clovers, is largely responsible  
 for the alarming spread of noxious weeds con-  
 sequently it is always advisable to sow the  
 best seed available.

Early maturing crops, such as clover hay,  
 can be cut before the weed seeds mature,  
 thus preventing the distribution of weeds.  
 Summer cultivation of the stubble land,  
 followed next season by a hoed crop properly  
 cared for, will destroy all the weed seeds  
 sufficiently near the surface to germinate. To  
 eradicate weeds it is important to know some-  
 thing of their nature and growth. Some  
 excellent advice regarding the commoner  
 varieties is given by Mr. Simpson Rennie,  
 owner of the gold medal farm of Ontario.

**THE CANADA THISTLE AND PERENNIAL SOW  
 THISTLE.**—These can be entirely killed in a  
 single season by a properly worked corn or  
 root crop. The main thing is to keep them  
 from showing above ground. As soon as the  
 thistle is allowed to grow up and develop  
 leaves it commences to store away plant food  
 in its underground stem and roots, so that by  
 the time it is in full bloom it will have stored  
 sufficient food to live through another season,  
 no matter what cultivation is given the land.  
 Where a summer fallow is resorted to there is  
 no chance in clearing the land of perennial  
 thistles, either by shallow plowing or by  
 using a cultivator with wide points on the  
 teeth, going over the land at least once every  
 three weeks until August.

**BIND WEED.**—This is a perennial and one  
 of the most difficult weeds to eradicate. On  
 account of its twining nature and deep roots  
 it can scarcely be killed in a single season,  
 even where the land is in a hoed crop. The  
 only way to kill it thoroughly is with a sum-  
 mer fallow, worked every eight or ten days  
 with a broad-shared cultivator.

**COUCH GRASS.**—To eradicate this trouble-  
 some perennial it is advisable to plow im-  
 mediately after harvest, but no more than  
 four or five inches deep, as the rootlets are  
 near the surface. When the weather is dry,  
 the roots can be gathered into rows by means  
 of the harrow and sulky horse-rake. The  
 spring-tooth cultivator is also very effective  
 in drawing the roots to the surface where  
 they are not so numerous as to block it up  
 entirely. The roots collected should be  
 allowed to dry and then burned. A well-  
 worked corn or root crop the next year will  
 help materially in subduing the weed.

**OX EYE.**—The daisy is most troublesome in  
 pasture and sod land, but is not much seen  
 in well cultivated fields. It may be got rid  
 of by seeding only to clover, cutting this  
 before the daisy seed ripens, and plowing up  
 the sod after the first crop.

**FALSE FLAX, PIGEON WEED AND CHES.**  
 All these weeds start to grow in the fall and  
 produce seed the next season. If fall wheat  
 be left out of the rotation, they may be read-  
 ily eradicated by regular summer cultivation  
 after harvest, thus germinating and destroy-  
 ing the seed.

**RAG WEED.**—By growing early maturing  
 crops and plowing up the land immediately  
 after the crops are off, the seed of the Rag  
 Weed will be prevented from maturing, and  
 in a few years this weed will be destroyed.

**WILD OATS.**—This is an annual which is  
 very troublesome in some sections. It is  
 best to work the land as soon as the crop is  
 taken off, thus encouraging the seeds to  
 germinate. The next season a hoed crop

should be put in. The second spring the  
 land should be sown with some grain without  
 plowing and seeded down to grass. If the  
 land is left in sod for three or four years  
 most of the seed will have lost its germinat-  
 ing power.

**WILD MUSTARD.**—Although only an annual,  
 this weed is very troublesome on account of  
 the vitality of its seeds. They may lie in the  
 ground for years and yet, when brought to  
 the surface, will germinate. Thorough surface  
 cultivation from harvest to time of freezing  
 up, followed by a hoed crop the next spring  
 will largely eradicate mustard. It may also  
 be destroyed in grain crops by spraying with  
 a two per cent solution of copper sulphate at  
 the rate of fifty gallons to the acre. If the  
 mustard plants are in bloom a stronger  
 solution will be necessary, say three to four  
 per cent.

Although only a few of the noxious weeds  
 are here mentioned, if the above methods are  
 carried out they will destroy at the same time  
 scores of others of less importance.

### The Scientific Baby.

(From the Philadelphia Inquirer.)  
 Hospital methods are adopted more each  
 year in the private treatment of babies—the  
 methods, that is to say, of the superior  
 modern hospital conducted under the best  
 medical supervision.

The hospital method puts baby on its back  
 and forbids its being rocked or "walked"  
 when it cries.

Visitors and relatives are no longer encour-  
 aged to pound it in the ribs, pinch its chin  
 and transfer microbes to its lips.

This treatment of infancy is doing much to  
 check nervousness in our children, to protect  
 them from bad habits and needless exactions  
 and to make them self-reliant. Babyhood,  
 indeed, is the best conducted age at present.  
 When the child grows older it meets undoubt-  
 ed loss in the substitution of nurse's for  
 mother's care, a tendency encouraged by the  
 new activities of women and by city life.

At the beginning, however, in the first few  
 weeks and months of its existence, when  
 change and development are more rapid than  
 at any other period, the human being has  
 never had such perfect treatment as it is the  
 happy fashion to bestow upon it now.

### A Cheerful Prediction.

To the Editors:  
 This is what you editors will come to if  
 you persist in being editors. I ran across  
 the clipping in a newspaper yesterday:

The editor sat in his easy chair, lighting  
 his pipe on his auburn hair. A halo shone  
 over his face so fair, but his knees were out  
 and his feet were bare. And he sang a song  
 both sad and sweet, while the flies died all  
 around his feet, for he had no food in his  
 shop to eat, and the ground was covered over  
 with sleet. Now, w. the world was the  
 cuss to do? He had eaten the paste and  
 swallowed the glue; he hadn't a drink, he  
 hadn't a chew, and while he starved his  
 whiskers grew, and the villain still pursued  
 her.

[We are too overpowered at this compli-  
 ment to make any reply. Our wit has en-  
 tirely forsaken us.—THE EDITORS.]

### The Crucial Test.

"Are you sure you love him," asked the  
 girl who gives advice.  
 "Almost," answered the girl with the con-  
 fiding nature, "I have watched him eat an  
 orange and a cream puff, and still retain the  
 impression that he is serenely noble. I am  
 going to watch him eat corn from the cob,  
 and if that doesn't disturb my impressions I  
 shall feel absolutely sure."

**Good Painting**  
 Is the best  
 painting.  
 There's econ-  
 omy in it. Good  
 paint saves the pain-  
 ter's time by spread-  
 ing easy; it saves in cost  
 of material by covering  
 most surface to the gallon; it  
 saves in final cost of the job  
 by wearing longest.

**THE SHERWIN-WILLIAMS PAINT**  
 is good paint. It is made from the best materials so  
 thoroughly incorporated that they are inseparable and  
 hold together against the weather for the longest time.  
 Come in and get color card showing the 42 shades.
