How Money Grows When out at Interest.

Youth's Companion: Contracts were recently let for the erection of a splendid trade school building in Boston, to be paid for with the five thousand dollars which Benjamin Franklin bequeathed to the city at his death. The contract price is almost three hundred and twenty thousand dollars, yet the trustees of the fund have a hundred thousand dollars additional to be used for equipment.

Franklin intended that his original bequest should be lent in small sums at five per cent interest to young married mechanics who had served their apprenticeship in Boston.

He directed that at the end of a hundred years, or in 1891, five hundred thousand dollars of the accumulated fund should be spent by the trustees in public works which might be of most general use to the inhabitants. The remaining hundred and fifty-five thousand dollars of the fund—he computed that it would have amounted to six hundred and fifty-five thousand dollars—was to be let out at interest for another hundred years, when the accumulations should be similarly expended.

It was not found practicable to lend the money to young mechanics, as they could not give the security which the will demanded; but the money has been kept at interest, and there is now, after allowing for the new building and its equipment, a balance of more than a hundred and fifty thousand dollars, which is to accumulate till the latter part of the present century.

Although the fund to be spent became available in 1891, it was not until last year, and after much discussion, that the erection of the trade school was decided upon. It is intended to offer instruction in the evening to those actually employed during the day.

Such a modern trade school, because of its conservation of energy, would have appealed to Franklin's practical sense. In the old days there was little or no direct industrial instruction, and the apprentice was often at the beginning not much more than an errand boy. With such formal instruction as is given in the mechanical schools to-day a youth can learn more in one year than the boy of Franklin's day could learn in two or three.

To Keep the Skin in Health

AVOID PORE-CLOGGING POWDERS, AND CURE ALL SKIN IRRITATIONS AND ERUPTIONS WITH

Dr. Chase's Ointment

It is quite possible that, while you know of Dr. Chase's Ointment as a cure for eczema, psoriasis and the most severe forms of itching skin disease, you may have overlooked its value as a beautifier of the skin.

There are minor forms of skin trouble, such as rough, red, skin, chafing, chapping, pimples, blackheads, blotches, irritating, or poisoning from the clothing, etc., which disfigure and form a starting point for serious trouble.

A few applications of Dr. Chase's Ointment at such times not only removes these blemishes, but also restores the health and beauty of the skin, and positively prevent further development.

Miss C. Stanley-Jones, professional masseuse and nurse, 283 Simcoe street, Toronto, Ont., writes:—"In my occupation as a nurse I have come across many cases in which Dr. Chase's Ointment has been used with extraordinary results. One case I recall was that of a child of sixteen months, who was in a bad way with scaly head. It was a really nasty case, causing the child to suffer very much and to be very troublesome. I persuaded the mother to use Dr. Chase's ointment, and in ten days the child was entirely cured. "Another case was that of a lady who was greatly troubled with eczema on the face. The doctor was dosing her with medicine, which was doing no good. In this case cure was effected in seven days with only one box of Dr. Chase's Ointment. Both of these cures were lasting."

Dr. Chase's Ointment is delightfully pure and creamy, is pleasant to use, and is rapidly absorbed. It acts as a food for the skin, making it soft, smooth and velvety. By its soothing antiseptic and healing properties it allays inflammation, relieves itching, and heals sores, wounds and ulcers; 60 cents a box, at all dealers, or Edmondson, Bates & Co., Toronto.

Boundary Line Bungles.

Our relations with the United States is always a good staple hot weather topic in editorial sanctums, when news is scarce and the sea serpent is not chasing bathers at the summer resorts. There still seems to be a

disposition in some quarters to "Remember the Maine" boundary line, and some other international incidents, as the following from the "Walkerton Herald" of recent date will show:

"A little speck no larger than a man's hand, is creeping up on the political horizon between Great Britain and the United States, which may eventually develop into dangerous proportions. Great wars have arisen from smaller causes. The United States wants to establish naval training stations on the Great Lakes between Canada and the United States, contrary to the treaty in that behalf between the two nations.

"The United States is constantly encroaching on the rights of Canada, in defiance of treaties, merely because it feels able to do so; and Great Britain is just as constantly giving way to their arrogant demands, merely because it desires to avoid the dangers of war by refusing to conciliate them. It might just as well undertake to conciliate the father of evil. Through the operations of this spirit, we lost the State of Maine. From the same cause they have driven us out of the seal fisheries in Behring Sea; they have beaten us out of a big slice of Alaska; they are fishing out our inland waters, within the three-mile limit of our shores, and now they want to establish themselves in command of the Great Lakes, Superior, Huron, Erie and Ontario, by putting war vessels on these waters.

"If Great Britain allows it, Canada may as well quit the pretense of being a self-governing country. We will either have to submit to the United States, of face the very serious problem of fighting for our national existence."

Eczema.

For the good of those suffering with eczema or other such trouble, I wish to say, my wife had something of that kind and after using the doctors' remedies for some time concluded to try Chamberlain's Salve, and it proved to be better than anything she had tried. For sale by All Dealers.

The Non-Producers.

(Montreal Witness.)

There is a saying in Europe that every man who works for a living carries a soldier and a non-producer on his back. According to Dr. Charles J. Bushnell, a Washington statistician, it costs the people of the United States six thousand million dollars a year to support their criminals and paupers. These figures stagger imagination, but they do things over there in such a big scale that one is surprised at nothing in the way of millions however applied. Dr. Bushnell, whose assertion is endorsed by his wife, claims that his figures are taken from authoritative sources and challenges anyone to disprove their accuracy. He describes this criminal and pauper affliction as "The Social Illness of the United States," a correct designation surely, if his statistics be accurate. He points out further that the increase of wealth in the Republic is only five thousand million dollars a year, which goes to show that the criminals and paupers are devouring the wealth of the nation faster than it accumulates, and must in time, if not checked, end in national bankruptcy. This publicist has here carried his statements further than they will carry conviction. But it is undoubtedly true that the parasite classes referred to do impose an enormous burden upon the producers and workers. Every honest man who marries and raises a family in respectability carries a heavy burden, and, in addition must bear a share in supporting the families of the vicious and improvident, from whom the criminal and pauper armies are recruited.

DR. A. W. CHASE'S CATARRH CURE ... 25c.

Is sent direct to the diseased parts by the Improved Blower. Heals the ulcers, clears the air passages, stops droppings in the throat and permanently cures Catarrh and Hay Fever. Blower free. All dealers, or Dr. A. W. Chase Medicine Co., Toronto and Buffalo.

Death.

(North American Review.)

What we call death is not annihilation, it is simply a change of energy. Decay is simply the breaking up of life into new and more multiplied forms of life.

The latest science recognizes at least nine different forms of energy into which a single force may pass and repass without diminution or loss. That of course is the great discovery of modern science, that energy may be transformed from one form to another, may be transferred from one body to another, but cannot be destroyed.

Not immediately was the bearing of this,

scientific law on the doctrine of immortality recognized. And yet, as the mind adjusted itself to the almost protean forms of energy, it became apparent that life itself which is the highest form of energy we know, must inevitably become subject to this law.

Death, when it touches a human life, is not destruction of energy, it is simply a change through which life passes into some new form of activity.

Your candle, for instance, burns down to the socket, and after a flicker or two goes out. To the eye of sense that is the end of your candle, and it has been used over and over again as the image of death. But according to the law of the conservation of energy the light and heat of that candle are not lost. They have passed into other forms of energy more subtle but not less real.

A log is slowly consumed upon the hearth until nothing remains but a heap of filmy ash, but the light and energies of that log are not lost. The life which was in the tree deposited in that log certain forces, and the fire has liberated these forces in other modes of activity. The whole universe is a vast area of ceaseless, indestructible energy, of which life is the highest type.

Within the last half dozen years science has emphasized still another fact, namely, that the more powerful a force is the less visible it is to human sight, the less susceptible of recognition. The energy of radium, for example, is so tremendous that the hundredth part of a grain dropped into its own weight of water will change the temperature of that water from the freezing point to the boiling point in a single hour.

It is of course admitted that this does not prove the immortality of the individual soul by any means, but it does prove the indestructibility of life. Religion has surely gained a magnificent trophy from science when science tells her that life is an indestructible element in the universe.

HOW DOES THIS STRIKE YOU?

A country church offered such a small salary that Mr. Spurgeon wrote to the trustees: "The only individual I know who could exist on such a stipend is the angel Gabriel. He would need neither cash nor clothes, and he would come down from heaven every Sunday morning and go back at night." The qualifications specified in another church were so many that Mr. Spurgeon recommended the corresponding deacon to take a large sheet of brown paper and cut out a minister of the size and shape desired."—Sel.

Rev. J. B. Ganong field secretary of the N. B. and P. E. I. Sunday school association returned on Friday from the World's S. S. Conference held in Rome. At the conference thirty-seven nations and forty religious denominations were represented. A hundred missionaries were there from all over the world. The U. S. A. and Canada sent 700 delegates, every province in Canada being represented. At the gathering the World's S. S. Association was organized, \$100,000 been pledged there and then for the purpose of extending Sunday school work. Adult Bible classes were organized in the Azores, Gibraltar, Algiers, Naples and Rome.—Union Advocate Newcastle.

New Freeman Will Absorb Monitor.

(St. John Sun.)

It is pretty definitely understood that The Monitor is soon to be absorbed by The New Freeman. When this has been brought about T. O'Brien, editor of The Monitor, will probably become business manager of The New Freeman. Steps towards carrying out this absorption have already been taken, and its accomplishment will probably be announced formally very soon. In the past The Monitor has been a weekly of considerable influence in Roman Catholic circles and has been conducted with success. The new publication, however, should be able to do more effective work for the denomination than could be accomplished with preserving their separate identity.

No Room.

It has been a most delightful picnic, but it occurred to Bobby as he watched the elders of the party clearing away the remnants of the feast that he had eaten a great deal—perhaps a trifle too much for comfort.

"Would you like another piece of this cake, Bobby?" asked a kindly disposed person, surprising what she took to be a wistful look in the little boy's eyes.

"No'm, thank you," said Bobby. "I think perhaps I could chew it, but I know I couldn't swallow it."

Always Better

Progress is the watchword all over the great Progress Brand Tailory. Better fabrics—better workmanship—better fit—better wear.

That is why men, who demand the best in clothing, wear

"Progress Brand"

Suits and Overcoats.
