One ounce Fluid Extract Dande-One ounce Compound Salatone; Four ounces Compound Syrup

darsaparilla : Mix, and take a teaspoonful after meals and at bedtime, drinking plenty

The above prescription has been found invaluable in the treatment of kidney, bladder and urinary troubles, and diseases arising therefrom, such as rheumatism, sciatica, lame back and lumbago, and we feel that the public are entitled to particulars concerning it.

A prominent physician states that the excellent results that have been obtained from the use of the mixture are due to its direct action upon the kidneys, assisting them in their work of filtering all poisonous waste matter and cids from the blood and expelling same in the urine, and at the same time restoring the kidneys to a healthy

He further states that anyone suffering from afflictions of this nature will find it to be very beneficial, and suggests that it be given a trial.

An Adventure in the Life of Audubon

My march was of long duration. I saw the sun sinking beneath the horizon long before I could perceive any appearance of woodland, and nothing in the shape of man had I met that day. The track which I followed was only an old Indian trace; and as dark ness overshadowed the prairie, I felt some desire to reach at least a copse in which I might lie down to rest. Shortly after a firelight attracted my eye. I moved towards it, full of confidence that it proceeded from the camp of some wandering Indians. I was mistaken. I discovered by its glare that it was from the hearth of a small log-cabin, and that a tall figure passed and re-passed between it and me, as if busily engaged in household arrangements. I reached the spot, and presenting myself at the door, asked the tall figure, which proved to be a woman, if I might take shelter under her roof for the night? Her voice was gruff, and her attire negligently thrown about her. She answered in the affirmative. I walked in, took a wooden stool, and quietly seated myself beside the fire. The next object I observed was a finely formed young Indian resting his head between his hands, with his elbows on his knees. A long bow rested against the log-wall near him, while a quantity of arrows, and two or three raccoon skins, lay at his feet. He moved not; he apparently breathed not. Accustomed to the habits of the Indians, and knowing that they pay little attention to the approach of civilized strangers, I addressed him in French, a language not unfrequently partially known to the people in that neighbourhood. He raised his head, pointed to one of his eyes, and gave me a significant glance with the other. His face was covered with blood. The fact was, that an hour before, as he was in the act of discharging an arrow at a racoon in the top of a tree, the arrow had split upon the cord, and sprung back with such violence into his right eye as to destroy it for ever.

Feeling hungry, I inquired what sort of fare I might expect. Such a thing as a bed was not to be seen, but many large untanned bear and buffalo hides lay piled in a corner. I drew a fine timepiece from my breast, and told the woman that it was late, and that I was fatigued. She had espied the watch, the richness of which seemed to operate upon her feelings with electric quickness. She told me that there was plenty of vension and jerked buffalo-meat, and that on removing the ashes I should find a cake. I helped my dog to a good supper of vension, and was not long in satisfying the demands of my own

appetite.

The Indian rose from his seat as if in ex treme suffering. He passed and re-passed me several times, and once pinched me on the side so violently that the pain nearly brought forth an exclamation of anger. I looked at him; his eye met mine, but his look was to forbidding that it struck a chill into the more nervous part of my system. He again seated himself, drew his butcherknife from its greasy scabbard, examined its edge as I would do that of a razor suspected dull, replaced it, and again taking his tomahawk from his back, filled the pipe of it with tobacco, and sent me expressive glances

WILSON'S DRUCGISTS, CROCERS AND GENERAL STORES Oc. per packet, or 3 packets for 25c. will last a whole ecason.

whenever our hostess chanced to have her back towards us.

Never until that moment had my senses been awakened to the danger which I now suspected to be about me. I returned glance for glance to my companion, and rested well assured that, whatever enemies I might have, he was not of the number. Under the pretence of wishing to see how the weather was, I took up my gun and walked out of the cabin. I slipped a ball into each barrel, scraped the edges of my flints, renewed the primings, and, returning to the hut, gave favourable account of my observations. took a few bear-skins, made a pallet of them and calling my faithful dog to my side, lay down, with my gun close to my body, and in a few minutes was to all appearance fast

A short time had elapsed when some voices were heard, and from the corner of my eyes I saw two athletic youths making their entrance, bearing a dead stag on a pole. They disposed of their burden, and, asking for whiskey, helped themselves freely to it Observing me and the wounded Indian, they asked who I was, and why that rascal (meaning the Indian, who, they knew, understood not a word of English,) was in the bouse? The mother-for so she proved to be-bade them speak less loudly, made mention of my watch, and took them to a corner, where conversation took place. The last words reached me-"That will soon settle him! Boys, kill you; and then for the watch."

I turned, cocked my gun-locks silently, and tapped gently my faithful dog, who moved his tail, and fixed his eyes alternately on me and on the trio in the corner. I lay ready to start up and shoot the first who might attempt my life, The moment was fast approaching, and that night might have been my last in this world had not Providence made preparations for my rescue. All was ready. The murderous hag was advancing slowly, probably contemplating the best way of despatching me, while her sons should be engaged with the Indian. I was several times on the eve of rising and shooting her on the spot; but she was not to be punished thus. The door was suddenly opened, and there entered two stout travellers, each with a long rifle on his shoulder. I flew to my feet, and making them most heartily welcome, I told them how well it was for me that they should have arrived at that moment. The tale was told in a minute. The drunken sons were secured, and the woman, in spite of her defence and vociferations, shared the same fate. The Indian fairly danced with joy, and gave us to understand that, as he could not sleep for pain, he would watch over us. You may suppose we slept much less than we talked. The two strangers gave me an account of their once having been themselves in a somewhat similar situation. Day came, fair and rosy, and with it the punishment of our captives.

They were now quite sobered. Their feet were unbound, but their arms were still securely tied. We marched them into the woods off the road, and having used them as Regulators were wont to use such delinquents, we set fire to the cabin, gave the skins and implements to the young Indian warrior, and proceeded, well pleased, towards the settlement."-Romantic Incidents in the Lives of Naturalists, &c.

Piles get quick and certain relief from Dr. Shoop's Magic Ointment. Please note it is made alone for Piles, and its action is positive and certain. Itching, painful, protruding or blind piles disappear like magic by its use. Large nickel-capped glass jars 50 cents. Sold by All Dealers.

The Four Herschels.

By the death of Alexander Stewart Herschel, the world of science loses the fourth member of one family who became illustrious through original researches and discoveries in astronomy. Sir William, the first and most famous of the Herschels, was born in Hanover in 1738, and followed his father's profession as a musician till after his removal to England, when he turned his attention to astronomy, and gave proof that genius can surmount all obstacles. Being too poor to purchase a telacope he made one for himself, and, with it, he applied his nights, or at least such few of them as in that murky climate exposed the sky, to studying the heavenly bodies. In 1781 he made his first great discovery, that of the planet Uranus, which he named Georgium Sidus, after his patron, King George III. Considerable space would be required to enumerate all his discoveries. More fortunate than other great scientists, who had to pursue their investigations in poverty, and against the prejudices of the ignorant, his lot was made easy by having a sister devoted to the same science, and by his marriage to a wealthy widow. A knighthood and royal pension of four hundred pounds futher enabled him to continue his studies, which resulted in his giving to the world the most valuable information ever contributed by one man to the science of astronomy. He was the first to reveal the existence of other solar systems besides our own, and, by his investigations of the Milky Way and the constitution of nebulae, he was the first to give the human mind a conception of the immensity of the universe. His sister. Caroline Letitia, was his constant assistant CHARLES COMBEN,
Solicitor for Mortgagee,
June 5-5i

pendent study. Her catalogue of the stars, published in 1798, established her fame, which was increased by her observations of comets and the discovey of five of these visitors previously unknown. Sir John Frederick William Herschel, the only son of Sir William, emulated his father's fame. He became not only a great astronomer, but an adept in transcendental mathematics. He laid the foundations of the science of meteorology. His treatises on sound and the theory of light revolutionized the scientific conception of these phenomena. In his 'Preliminary Discourse on the Study of Natural Philosophy,' the most charming book ever written on a scientific subject in any language, he led the way in promoting the popular study of science, which Huxley, Carpenter and others followed to the great advantage of the general public, ordinary readers being thus made familiar with the progress of natural science. He was the first to map the entire visible heavens of both the northern and sothern hemispheres. This work occupied him for many years, and its conclusions are incorporated in all text-books on astronomy. Like his father, he was a voluminous writer, and all his works are standard authorities on the subjects of which they treat. Alexander Stewart Herschel, who has just died, succeeded to the baronetcy bestowed on his father by Queen Victoria on her coronation, and to what was of greater value, the family genius for scientific investigation. His contributions to astronomy were many and important. There is no record of any other, family having produced so many scientists of the first rank for three successive generations. It would be impossible to estimate the value of the obligation the world is under to the four Herschels.

Bad Burn Quickly Healed.

"I am so delighted with what Chamberlain's Salve has done for me that I feel bound to write and tell you so," says Mrs. Robert Mytton, 457 John St., Hamilton, Ontario. "My little daughter had a bad burn on her knee. I applied Chamberlain's Salve and it healed beautifully." This salve allays the pain of a burn almost instantly. It is for sale by all dealers.

It is now generally conceded that Mr. Lemieux's new postal arrangements with the United States, though well intended, have proved not only useless but injurious. The new regulations in Canada do not keep out United States publications as designed but the regulations on the other side to prevent the the distribution of Canadian publication among the thousands of Canadians on the other side of the boundary line.-Halifax
