

Oliver Rolston.

Oliver Rolston, of Grafton, who went to Boston about five months ago to be operated on for cancer, died on Sunday morning at the residence of his sister, Mrs. Jones, in Melrose, Mass. He was in his 64th year and is survived by four brothers in Grafton, Joseph, William, Robert and Thomas, and James living in the west, and four sisters, Mrs. Irvin Jones, Mrs. Thos. Estey, Mrs. John Rolston, of Melrose, Mass., Mrs. Luthrop Sewell, of Pembroke. The remains were brought home and interment made in the Kirk burial ground, Northampton.

Gladys Stewart.

Died at her home, Benton Ridge, Car. Co. July 13th, Gladys, the youngest child of Mr. and Mrs. Peter Stewart, aged two years and four months. She leaves a sorrowing father and mother, four sisters and two brothers to whom the sympathy of the entire community goes out in this their sad hour of bereavement. But to the sorrowing ones we would point them to the Heavenly Father, who alone can give them strength their loss to bear and lead them in the realms of endless day. The funeral services were conducted from her home at Benton Ridge, July 15th, Rev. J. E. Flewelling officiating. Interment was made in Benton cemetery. —Com.

Wendall B. Farris Removes to Nelson.

W. B. Farris, brother of J. W. De B. Farris, and for some months connected with the firm of Macdonald, Farris & Killam, has chosen Nelson as his future field for the practice of law. Mr. Farris left yesterday, going by way of Seattle and Spokane. In his removal the capital of the Kootenay gains and Vancouver loses a young New Brunswick British Columbia lawyer of ability and great promise.

The youngest son of Hon. L. P. Farris of a former New Brunswick cabinet, he came to the coast early in the year from St. John after graduating in law in his native city. His departure is regretted by many friends. —The Daily Province, Vancouver, July 3.

An Expert Opinion.

H. A. Keller, the mining engineer of the United States Amalgamated Copper Co., arrived here from New York on Tuesday in the interests of his company to look over the mining properties in Northampton.

Wednesday was devoted to the gold and silver claim known as Dominion No. 1. This consists of 14 square miles, just north of the Cobler-Sexton mine and promoted by H. G. Noble, Hon. W. P. Jones, N. S. Dow, Dr. P. T. Kierstead, J. J. Rogers and E. L. Greer.

Mr. Keller said referring to this property: "I think it is a proposition, and I am pleased with the indications. You have a long, nice clean vein. I have traced it two miles. I would advise you to sink a shaft 25 feet at the crosscut, and if the ore is as good as on the surface, and it should get better with depth, it will be a proposition that will be quickly taken up by outside parties. The two miles the shale and quartzite have been traced and all the way I found rich ore coming out between these rocks."

On Thursday morning Mr. Keller, B. B. Manzer, J. H. Thompson, J. P. Malaney, H. G. Noble, Hon. W. P. Jones, N. S. Dow, Dr. P. T. Kierstead, J. J. Rogers, E. L. Greer, and John McClement drove down from Woodstock to visit the Cobler-Sexton mine. About \$6000 has been spent.

In regard to this mine Mr. Keller said: "It would be a pity to stop the work where you are at present. I'm a mining man and might put money into a mine where you would not. You have done well so far and thoroughly explored the foot wall. You are gaining no depth now. Go ahead a little further. Cross over to the hanging wall and get into the hill; drive along the hanging wall 50 or 100 feet until you strike the junction of the spur and the main vein and then sink your shaft. You must explore your hanging; you have not done so yet, but have merely worked the vein. The ore might concentrate in the course of the vein, or it might concentrate in the depth, or in the hanging wall; it frequently concentrates in the hanging wall or spurs and not in the big vein; if you can get the value in a two foot vein that you are getting in a nine-foot, you have a good proposition. You have a nice clean vein and you certainly should push it until you reach the junction. You could narrow your width of tunnel to four feet, which is the usual width, as cars for ore are narrow. I will render my report to the company. What the capitalists may do about it I do not know for next week I may be in Arizona."

Phonographs For Dairy Farms.

We call the attention of the Provincial Agricultural Department to the following facts about the relation between music and milk. Investigation and experiment are in order.

A New Jersey farmer claims to have discovered that the music that has power to soothe the savage breast has also a potent effect upon the lactal capacity of the gentle cow.

This dairyman hired a milkmaid who brought with her from her native Switzerland the mountain yodel, with all its valley spanning power and its wild Alpine charm.

The spell of her vocal efforts so entranced her bovine charges that their yield of grew daily richer and more abundant.

The farmer saw his profits waxing so rapidly that he had dreams of forming himself into a corporation, so that he could legally water his stock and simultaneously increase his dividends.

But these visions were brought to an end by the maid herself, who quit the farm for a home of her own.

But this New Jersey farmer did not abandon himself to lamentations over his loss of the yodling maid and the coincident decrease in the yield of his dairy.

He displayed both power of inference and gift of invention. If yodling pleased the bovine mind, why should not other forms of music wield an equally potent spell? The voice had gone, but could there be no substitute?

The experiments thus suggested was tried, with most profitable success.

A phonograph with a selection of choice records was set up in the meadow. The flock of cows almost forgot to chew the cud, so enraptured were they with the melodious strains.

But almost joyously they resumed their duty; and that dewy eve once more saw the pails in the barnyard filled to overflowing.

It is now up to candidates for the higher degrees in the Provincial Agricultural College to submit these on "The relation between Melpomene and the milk-pan."

A New Steamboat.

On account of the Steam Boat Companies on the river refusing to give the people attending the Camp Meeting at Beulah reduced rates this season, it was decided to purchase a steamer, and run it in the interest of the Camp Meeting next year. The Alliance voted to form a company with a capital of twenty thousand dollars. Immediate action was taken and \$1,000.00 of the stock was subscribed on Saturday evening.

The boat is steel, is 130 feet long 18 foot beam, side wheel. She draws when light only 2 feet 10 inches of water; has electric lights, consumes 2½ tons of coal on four hours run at full speed, she is a 12 knot boat. She is fitted to carry 500 passengers. It is proposed to run, two or three trips daily between St. John and Beulah Camp Ground. —King's Highway.

Too Much Good in the Worst.

Human nature is often self-contradictory. The story of the San Francisco man who had committed a horrible crime, illustrates the point.

He had killed a woman. An innocent man was arrested on suspicion.

Thereupon the guilty man was seized with remorse, and, though he had been capable of the greatest baseness, he came to the front, stood up with manliness and said that the accused was innocent.

He confessed his own guilt. The confession no doubt will cost his life. But he confessed to save an innocent man.

So we have the case of a brutal murderer driven by his own sense of justice to sacrifice his life for the saving of another.

There is no moral to be taken from the story save this: If it is true that we are born with "original sin," it is equally true that we are born with original virtue.

This dreadful criminal in San Francisco will go to the hemp rather than see an innocent man caught in the police mesh.

So, after all, the human nature of the lowest man is not all bad. Such an incident lights the path of the optimist.

Latham's Daring Attempt to Fly From Calais.

Herbert Latham, the French aviator, after waiting for over a week for a favorable opportunity to attempt a flight across the Channel from Calais to Dover, made a start Monday morning, but after covering about 16 miles and while at a great height the motor failed and the machine fell into the water. The French torpedo boat destroyer Harpon, was close at hand when the accident occurred and rescued both Latham and his monoplane.

Latham's start was made from the top of the cliff at Sangate under the most propitious circumstances. A stiff breeze which was blowing Sunday subsided at dusk and the clear starlit night indicated that perfect conditions would prevail at daybreak for the long delayed attempt.

At the first streak of day M. L. Latham came out of the shed clapping his hands with joy at the sight of the smooth crestless sea. A few minutes later a gun fired on the Harpon confirmed the daring aviator's opinion that conditions were right and an automobile was dispatched to Calais to apprise the authorities that a start would be made between 6 and 7 o'clock.

While the monoplane was hastily taken out and pushed to the top of the cliff a crowd of several thousand persons assembled to witness the start and the entire population

of the neighbouring villages lined up the shore below. Latham was in rare good humor and he carefully inspected every part of the machine and on making several trials with the eight cylinder motor found the machine perfect. There was a wait of an hour until the torpedo boats and tugs strung out in a line towards the horizon, took up their positions.

Finally all was readiness and the monoplane was pushed back 200 yards from the crest of the cliff which has a precipitous fall of 200 feet to the sea. Latham was clad in a knickerbocker suit and had donned a life preserver. He showed no signs of nervousness as he shook hands with his friends on mounting the saddle. "Start the motor," he cried to his assistants and then with a nod of his head and the words, "See you in Dover," threw the starting lever off, the machine running along the ground with increased momentum at every turn.

Just before reaching the edge of the cliff the aeronaut touched the horizontal lever and the machine with its white outstretched wings, rose gracefully and sailed out over the shining waters amid a roar of cheers from the cliff and shores. The monoplane, after leaving the cliff, ascended gradually until it was probably 300 feet above the sea. Then, straight as an arrow, it continued its flight towards the English coast, apparently under perfect control at a rate of about 35 miles an hour. The black hulled destroyer Harpon kept almost her aerial companion and at the end of 15 minutes both disappeared in the haze on the horizon.

SUMMER COMPLAINTS**DEADLY TO LITTLE ONES**

At the first sign of illness during the hot weather months give the little ones Baby's Own Tablets, or in a few hours the child may be beyond cure. These Tablets will prevent summer complaints if given occasionally to the well child, and will promptly cure these troubles if they come unexpectedly. For this reason Baby's Own Tablets should always be kept in every home where there are young children. Mrs. P. Laroche, Les Fonds, Que., says:—"Last summer my baby suffered severely from stomach and bowel troubles, but the prompt administration of Baby's Own Tablets brought him through splendidly." Sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Mrs Sage's Benefactions.

Mrs. Russell Sage, the widow of the 'miser of Wall street,' gave away nearly fourteen million dollars last year and has planned to dispose of the fortune of sixty-five millions left by her late husband within the next five years. As Mrs Sage is now past eighty, she may not live to see the accomplishment of her plans, but doubt less they will be carried out. Mrs. Sage's benefaction last year included ten millions for the 'Russell Sage foundation' and two millions for secret charities. The balance went to churches, colleges, schools and the Y. M. C. A. Her latest scheme is for the insurance of the lives of working men without profit, which it is estimated, will cost fifty millions. It is calculated that Mrs. Sage is giving away her fortune at the rate of \$2.89 a second or \$171.67 a minute. What this means may be judged from the fact that Rockefeller is estimated to have made his vast fortune at the rate of not more than 20 cents a second.

C. Sydney Ingraham, of Temple York Co. returned Saturday evening from Campo Bello Island where he spent the past week.

Ernest Everett of New York, is the guest of his uncle W. H. Everett.

JAMES BARNETT, of Lower Woodstock, died on Monday evening of paralysis. He was about 58 years of age.

It is understood that the Rev. H. D. Marr will receive a call to the Portland Methodist church.

Dr. W. D. Rankin was in St. John attending a meeting of the Medical Society.

Mr. and Mrs. Hubert Seeley returned last week from a visit to Quebec.

Husband (reading from his paper)—Here they say, is a comet coming toward the earth, traveling at the rate of a million miles a minute. Wife (awaking from a dose)—Why don't they enforce the speed laws better?—Baltimore American.

QUEEN STREET,

WOODSTOCK, N. B.

Mahogany Furniture.

I am prepared to restore old pieces of Mahogany Furniture, no matter how badly broken up. These old pieces when repaired are quite valuable and far superior to anything of modern make. Being a Cabinet Maker and "French Polisher" of many years experience in the city of St. John, I think I understand my business. Also general repairing. Write to

G. N. A. BURNHAM,

Upper Woodstock, N. B.

Notice.

A vote of the ratepayers and of the property holding ratepayers of the Town of Woodstock, N. B., will be taken at the Town Council Chamber in the Town Hall at the said Town of Woodstock on Monday the Second day of August next, beginning at 10 a. m. and closing at 4 p. m. of the same day on the following proposition:—

The guaranteeing by the said Town of the bonds of Messrs. J. D. Dickinson & Sons to an amount equal to fifty per cent of the Tannery Plant to be erected by them in said Town and in no case shall such guarantee exceed the sum of (\$10,000) Ten Thousand Dollars. The bonds to bear interest at 4½ p. c. per annum payable semi-annually and to be retired by J. D. Dickinson & Sons in five years as follows: \$2500 00 in two years from date of guarantee, and \$2500 00 per year thereafter until the whole issue be retired. The bonds to be a first lien on plant until retired by payment. All interest accruing on said bonds is to be paid by said J. D. Dickinson & Sons as same becomes due.

If a majority shall vote in favor of the Town guaranteeing bonds then legislation will be asked at next session of the Provincial Legislature for authority for the said Town to so guarantee said bonds.

All ratepayers will be entitled to vote who would be entitled to vote if the vote were taken under Chapter 93 of Acts of Assembly 7 Edward VII and the vote will be taken in the same manner as therein provided.

Dated this 17th day of July, A. D., 1909.

By order of Town Council.
J. C. HARTLEY,
Town Clerk.
