HEADQUARTERS FOR
Cream Separators

—AT—

MacDougall's

Auction and Commission Store

I would like to ask the farmers a question—Why should I buy a Cream Separator from MacDougall—because he has had eight years' experience and knows something about the mechanism and make-up of a Cream Separator. If you buy a Separator from me I am here to look after your wants. It is my intention to make the Separator a special line and will keep on hand other extra parts for any machine that I handle. I claim that I can sell on a smaller commission than the man who has to travel and pay expenses for himself and horse. Be sure and see me before purchasing and I will save you dollars. Come in and look over the different makes.

Magnet, Capital and National

Three good ones. You can have your choice.

Auction Sale every Saturday. Big Bargains in Second-Hand Goods. When in town be sure and call. You will see something you want.

JOHN MacDOUGALL
Auction and Commission Agent

THE FLY NUISANCE.

The above is the title of a card, all ready prepared to hang up in the kitchen, issued by the Entomological Division, Central Experimental Farm, Ottawa. The card can be had by anyone on application.

On this card it is stated that house flies are now recognized as the most dangerous carriers of the germs of certain diseases, such as typhoid, tuberculosis, infantile diarrhoea, etc. The flies infect themselves in filth and carry the germs of disease on their legs and bodies, and pollute all food, especially milk, with which they come in contact. No fly is free from germs and the best method of prevention of the evil is to prevent the breeding of the insects. Flies breed in decaying vegetable and animal matter, chiefly in stable refuse. In order to prevent breeding farmyard manure should be regularly removed within six days, and either spread on the ground or stored at a distance of not less than a quarter of a mile from a house or building. Windows and doors of houses should be properly screened, especially those in the dining-room and kitchen, while milk and other food should be screened in summer by covering with muslin. Food should always be covered.

Flies may be killed by means of a weak solution of formalin or formaldehyde exposed in saucers in rooms. This is made by adding a tablespoonful of formaldehyde to a pint of water. The burning of pyrethrum in a room is also effective.—Toronto Weekly Sun.

Warning Royalty.

In many ways England is quite as real a democracy as the United States. A story about the young Prince Edward, told in The Atlanta Constitution, illustrates well this point. He was sent to school at Osborne. He had just arrived and was wandering about the grounds, when he was accosted by another small boy, who had already been a term at Osborne.

"Hello," said the other boy, who was the son of a captain in the navy. "You're a new boy. What's your name?"

"Edward," the little prince replied.

"Edward what, stupid?" said the other boy. "You must have another name."

"Edward of Wales," said the prince.

"Oh, so you're that chap," was his comment, as he walked away. "I hope you won't put on too much side."

Tariff Wars and Alarms.

Now that the American tariff scare is safely past there seems an opening for the alarmist story from Japan to the effect that an expected revision of the tariff will seriously injure Canadian trade. The American tariff alarm passed off because our neighbors learned in the harsh school of experience and necessity that their tariff as a weapon of offence was a sword grasped by the blade. They could not endure the loss involved in levying of their maximum tariff on Canadian goods. The Japanese seem to have fallen under the spell of the popular delusion, and are

trying to tax themselves into affluence. If they begin by putting a high duty on some lines of Canadian exports it may cause some loss and obstruction. Canada exports on an average about three quarters of a million dollars worth of goods to Japan that could be materially affected by tariff changes in that country. But when the inevitable extension of the protective favors increases the cost of production in Japan and the Japanese protective interests grow eager to obtain the full benefit of their advantages prices will permit importation over the elevated tariff wall. In that way trade laughs at tariffs.

Grain products make up a material part of our exports to Japan. If these are excluded they will be sold elsewhere. Fish, pickled and otherwise prepared, makes in some years a still larger item in Canadian exports to Japan. It is not likely that any Canadian industry will be permanently affected by contemplated tariff changes. Metals and minerals promise at present to make one of the chief lines of Canadian export to Japan. It is easy to see how an injudicious tariff designed in accordance with exploded fiscal theories would injuriously affect trade in many lines included under this head. Yet it will be comparatively easy to find other markets, and as Japan will lose much more heavily than Canada it is reasonable to look for openings in the tariff wall, intentional or otherwise. At present Japan's imports from Britain, amounting to about \$50,000,000 are subjected to about \$10,000,000, or an average of 20 per cent. This, together with the small area of the kingdom and the comparatively restricted production, indicates that the full course of tariff folly if entered upon will soon be run, and the return to a reasonable fiscal policy will not be long delayed. Canada's policy of fiscal peace and good-will has already borne fruit in commercial relations with the United States, France, Italy, and Belgium, while Germany has seen the folly of retaliation. At the same time it has strengthened the Imperial tie and has brought an unprecedented era of prosperity to the Dominion. Under the circumstances we need not fear unfavorable results from any policy Japan may adopt. If other nations make mistakes they will soon learn by experience as we did.—Toronto Globe.

ABSENT-MINDED TOILERS

The "boss" was a hustler. Two of his men were not. Long experience, however had made them wise in their way, says a writer in ANSWERS "now, then, where are you going?" asked the foreman, on one occasion.

"Please, sir," responded one of the men "we're taking this 'ere plank up to the saw-mill."

"Plank? What plank?" snapped the boss. "I don't see any plank!"

The man looked down at his hands, then over his shoulder, and turned blandly to his mate.

"Why, bless me, bill," he exclaimed, "if we ain't been an 'torgot the plank!"

Queen Mary is said to be the third English princess since the Norman Conquest to have become Queen Consort of England. The preceding kings have almost without exception married princesses of foreign blood—Alexandra herself is a Dane, but has lived in England so long that she regards herself as an English woman, and has announced that she intends to make England her home for the rest of her life.

New knowledge of tuberculosis and cancer is having its effect on insurance methods. Both these diseases were formerly regarded as hereditary, and children of parents who died from either of them were regarded as poor risks. Sometimes they were refused altogether. The diseases mentioned are now recognized as not hereditary, and no discrimination is made by actuaries against children of tuberculous or cancerous parents.

With the death of Dr. Robert Koch, the great German bacteriologist, the world has lost the second noted pioneer in the investigation of the relation between microscopic organisms and disease. The other was Pasteur. Doctor Koch is best known in America as the discoverer of the tuberculous bacillus and the demonstrator of the curability of the once dreaded disease; and that was only one of his many achievements in the realm of medicine.

It has long been known that birds eat insects but it has remained for a Rhode Island farmer deliberately to cultivate and encourage birds on his farm for that particular purpose. Heave swallows, robins, orioles and many other feathered friends were got to live within a few hundred yards of the house. As a result, there was not only plenty of sweet music, but in a year when the aphids, or insects, ravaged the apple-crop, that farmer had a big yield of valuable fruit.

Five Weeks with the Fruit Grower.

A. G. Tarney, Provincial Horticulturist, returned ten days ago from a five weeks tour among the illustration orchards and fruit growers. The Government orchards at Andover, Stanley, Doaktown, Chatam, Tetagouche, Balmoral and Bucouche were visited and pruned and a number of trees replaced. New illustration orchards were set at Little Shemogue, Westmoreland County and Plaster Rock. All the illustration orchards have been pruned with exception of those at new Pandon, Kingston and Upper Queensbury. Five hundred trees were planted and pruned on the farm of Philibert Depres, Cormierville, Kent County. Five hundred trees belonging to Stanley islas Cormier at Aboujajane, Westmoreland County, were pruned and assistance in planting and pruning private orchards given in the counties of Kings, Victoria, and Carleton. The trees are in bloom exceptionally early this year and in some localities slight damage from frost is reported. As an instance of the early season the eggs of the tent caterpillar were reported hatched April 27th. This insect and the larva of the bud moth are increasing steadily from year to year and spraying will have to be more generally adopted if their ravages are to be stopped.

Getting Personal

Harper's Magazine.

In one of the large cities a street car collided with a milk cart and sent a can after can of milk splashing into the street. Soon a large crowd gathered. A very short man coming up had to stand on tip-toe to see past a stout woman in front of him.

"Goodness!" he exclaimed. "What an awful waste!"

The stout woman turned round and glared at the little man and said sternly:

"Mind your own business!"

AN EASY FIT

A number of years ago there lived in northern New Hampshire a notorious woman-hater. It was before the day of ready-made clothing, and wanting a new coat he was obliged to take the material to the village tailor. She took his measurements, and when she cut the coat, made a liberal allowance on each seam.

The man's dislike of women in general prevented his having a fitting. He took the finished garment without trying it on. It was much too large, and his disgust was apparent in the answer he made to the friendly loafer on his first visit to the post office, when he wore the despised article.

"Got a new coat, Obed?" said the loafer. "No, I hain't!" said Obed. "I've got seven yards of cloth wropped round me.—Youth's Companion.

A Noise Like an Automobile

The butler and the gardener were interested in the doings of the household, as butlers and gardeners should be. London Opinion reports the following conversation between them.

Said the butler, "Have you heard the gov'nor's bought a new Velasquez?" "Has he that?" inquired the gardener. "Wot's he going to do with his old car, then, sell it?"

SPRING TIME IS CHURN TIME

There is no churn on the market that has so many satisfied users as the DAISY.

The barrel of the DAISY is made of seasoned oak, will not chip or break, keeps sweet and clean, runs on steel ball-bearings, fitted with cream breakers and easily detachable. The frame is steel, securely braced, and has combination and foot drive.

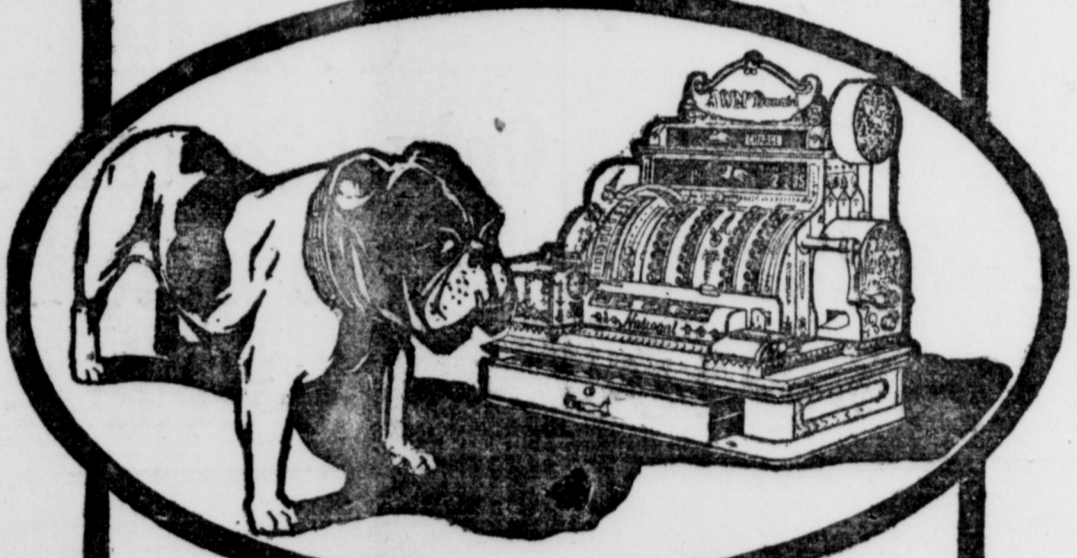

The DAISY CHURN is sold only by

W. F. Dibblee & Son.
