

SPRING TIME IS CHURN TIME

There is no churn on the market that has so many satisfied users as the DAISY.

The barrel of the DAISY is made of seasoned oak, will not chip or break, keeps sweet and clean, runs on steel ball-bearings, fitted with cream breakers and easily detachable. The frame is steel, securely braced, and has combination and foot drive.

The DAISY CHURN is sold only by
W. F. Dibblee & Son.
Wholesale and Retail.

MOTHERS AND SONS

It has been said that the cradle of Methodism was in Susanna Wesley's nursery, and if one looks to see what happened there, one finds the busy mother of nineteen children, twelve of whom survived infancy, who found time to give to each child an hour's private converse and instruction each week. Long after he left home, says a writer in Harper's Bazaar, John Wesley, then a fellow of Lincoln College, wrote back to his mother to ask her to keep his hour in prayer for him and thought of him every Thursday night, as she had been wont to do.

Susanna Wesley is as much the founder of Methodism as was her son. Not only did he inherit her tendencies, but by most carefully planned and arranged intercourse did she strengthen and develop the latent growth.

Scott says of his mother, "She joined to a bright and happy temper of mind a strong turn to the study of poetry and works of imagination," and he remembers how, as a little lame boy, she would make him read aloud to her Pope's translation of Homer.

Browning writes of his mother, "She was a divine woman," and although the poet's intellectual training was apparently the work of his father,—for who can forget those games with parlor furniture of the Trojan War?—yet he inherited his musical talent and artistic temperament from his mother.

One man tells of his mother arousing his determination and energy by teaching him "Herakles" and by his remembering to repeat "Harder and Higher" to himself when temptation to go easy arose.—Youths Companion.

How's This

We offer One Hundred Dollars Reward for any case of catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by him.

WALDING, KILPATRICK & MARVIN,
Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75 cents per bottle. Sold by all Druggists.

Take Hall's Family Pills for constipation.

St Paul's Cross, the famous preaching cross which stood beside St Paul's Cathedral in London for four hundred years, until it was torn down by order of the Long Parliament in 1643, is once more restored by private bequest. A graceful Doric column, twenty three feet high, is surmounted by a bronze statue of the apostle bearing aloft a cross. There is also a raised platform from which, as in bygone days, there may be outdoor preaching. The old cross was the center of the stirring life of medieval London. Papal bulls and royal proclamations were read from it, notorious criminals received punishment there, Tyndal's translation of the Bible was burned in front of it, and all the famous preachers of the church up to the time of the civil war between king and Parliament pleaded or thundered from its pupil.

A BATTLE WITH A BOG

Readers of "Lorna Doone" can never forget the terrible drowning of Carver in the bog. That death trap is still to be seen in the Exmoor country, and not long ago a valuable hunting horse was engulfed in the mire, and his rider barely escaped with his life. S. Barling Gould, who had a narrow escape from a similar bog, tells of it in his "Book of the West." The author was with an official from the Ordnance Survey, who was correcting the map of the country.

In the dusk we lost our way and got into Redmire. It was winter, the bog was unusually wet, and we could scarcely trip from one stone to another. Six bullocks had been lost in that very spot during the year.

All at once I sank above my waist, and was rapidly being sucked in farther. I called to my companion, but in the dark he could not see me. The water reached to my armpits. Happily I had with me a stout bamboo stick, and I placed it athwart the surface and held my arms as far extended as possible. By quickly jerking my body I gradually lifted it and then I threw myself forward as far as I could. Finally I managed to cast myself full length on the surface. The suction was so great that it tore the leather gaiters off my legs. For a quarter of an hour I lay stretched out, gasping before I got breath enough to worm myself along to dry soil.—The Youth's Companion

SCOTLAND'S STONE DESTINY

(London Chronicle.)

Dunstaffnage, on its lonely precipice, is not much to look at, but its history has been big with fate for Scotland. In the dim days of the Picts it stood for the seat of government and harbored the famous stone of destiny now under the coronation chair in Westminster Abbey. A cranny in the castle wall was pointed out to the writer last summer as the sacred receptacle of the magical stone.

Kenneth II. thought the stone would be safer in his Abbey of Soona, but, as it turned out, its transference only made it easy for Edward I. to carry it off to Westminster. Thirty two years later one of Edward's successors covenanted to return the stolen symbol to Scotland, but perfidiously forgot the promise. The stone, as every Scot knows, bided its time till King James came over the border to sit on the English throne, and so fulfill the famous prophecy:—

Except old seers do feign,
And wizard wits to blind,
The Scots in place must reign
Where they this stone shall find.

IN THE RACE FOR BUSINESS

The gentleman on the tortoise represents the man who does not advertise—the one who tries to do business as it was done in the days of the tallow candle or the oil lamp.

Are you in the glare of the electric light—in the automobile of Modern Methods?

Our Want Ads. are high voltage batteries, whether you want light or power—business publicity of competent help.

Lunch Bread.—Cream together two Tablespoonfuls of sugar and two tablespoonful of butter. Add the well-beaten yolks of two eggs and then the whites beaten to a stiff froth. Sift in half a teaspoonful of salt and a quart of sifted flour and gradually add a cupful of milk. Then stir in half a cake of compressed yeast dissolved in a little lukewarm water. Cover and let rise, and when very light and spongy, pour into buttered baking-pans, filling them half full. Let rise until the pan is full, sprinkle with granulated sugar, bits of butter and cinnamon, and bake in a quick oven. A cupful of currants may be added, or blueberries when in season.

BEGGING FROM THE WRONG MAN.

Bishop Talbot, the giant 'cowboy bishop,' was once attending a meeting of church dignitaries in St Paul, and one of the clergymen who had been urged by a tramp to give him some money sent the fellow to the bishop. 'He is a very generous man,' said the clergyman, 'and he might help you.' 'Everybody's Magazine' tells the story.

The tramp approached Bishop Talbot confidently. The others watched with interest. They saw a look of surprise come over the tramp's face. The bishop was talking eagerly. The tramp looked troubled. And then finally, they saw something pass from one hand to the other. The tramp tried to slink past the group without speaking, but one of them called to him:

"Well, did you get something from our brother?"

The tramp grinned sheepishly. "No," he admitted, "I gave him a dollar for his new cathedral at Laramie!"

"Your face is nice and clean, Bobby," said the Sunday School teacher; "but your hands are horribly dirty. How ever did you get them like that?" "Washin' me face, miss."

CHASE & SANBORN, MONTREAL

Paris Figaro, which asserts that it numbers all the sovereigns of Europe among its subscribers, recently published a paragraph to the effect that copies of the paper addressed to King Manuel at Lisbon had been returned in the original wrapper, stamped at the Lisbon post office,—in good Portuguese, of course,—"Gone, without leaving his address."

It is the man and not the machine that makes flying possible, in the opinion of the air ship expert of the Patent Office. He says that successful flights are due three fourths to the nerve and alertness of the operator and only one fourth to the wings and the motor. That is probably true, for they have not even made motor cars that any fool can operate safely.

A London English newspaper which, in advance of the trial, printed sensational stories about a man accused of murder had to pay a fine of two hundred pounds for contempt of court. The judge held that such stories are likely to create prejudice against the accused and to interfere with the ends of justice. But what an outcry about interference with the liberty of the press there would be in America if a court should fine an American sensational paper for a similar offense!

The Union of South Africa is to have a coat of arms, which will henceforth appear upon its seal and flag. The royal warrant is a quaint document in medieval style of phraseology, and provides, in substance, that in the four quarters there shall be respectively a figure of Hope, two wildebeests in flight an orange tree and a trek wagon; the shield is supported by a springbok on the left and a gemsbok on the right; the rest is a standing lion and the motto beneath the whole is "Ex Unitate Virgo," the Latin for, the old adage, "In union there is strength."

A Great sequoia tree recently cut down in California was fifteen feet in diameter, two hundred and seventy feet high and no less than two thousand one hundred and seventy one years old. I began to grow when Rome was still a republic and more two hundred years before Christ was born. There were marks on it showing that at least four times in history, A. D. 245, 1441, 1280 and 1797, the tree was badly burned by forest fires, but each time it had survived and repaired perfectly the damage which had been received.

First honors for size among ships now pass on to the White Star liner Olympic which was launched at Belfast late in October. The Olympic is of forty five thousand tons, is eight hundred and sixty feet long and draws thirty five feet of water. A sister ship, the Titanic, which is in process of construction, is of the same dimensions. These mammoth vessels are eight thousand tons larger and one hundred feet longer than the Lusitania and the Mauretania, the largest yet in service. For the accommodation of the Olympic and the Titanic at Southampton England, the largest dock in the world has been built. It is seventeen hundred feet long and four hundred feet wide.

Another Dangerous Insect.
Men have haunted wild beasts so persistently and relentlessly that the lions, tigers wolves and other dangerous animals have disappeared from every settled district. But the tiny creatures that prey on man have multiplied and are still working havoc.

It is less than twenty years since Maj. Ronald Ross announced his theory that malaria is spread by the bite of a certain variety of mosquitoes, and less than fifteen years since it was demonstrated that yellow fever, as well as malaria, is communicated by another species. Sleeping-sickness is caused by the bite of the infected tsetse of Africa; bubonic plague is carried by fleas from infected rats; the common house-fly spreads the germs of typhoid fever; and there may be other ailments, such as infantile paralysis, that are communicated by insects.

Doctor Sambon, an English physician has lately announced his conclusion that pellagra, a terrible and insidious disease ending in insanity and death, is such an ailment. He holds that it is communicated to the well by the bite of a black sand fly of the simuliidae family.

The most plausible theory heretofore was that the disease-germ went into the system through damaged corn used as food; but this did not explain cases occurring in districts where no corn is ever eaten. Doctor Sambon went to Italy in March, where he was joined by two representatives of the American army to test his theory that the sand-fly found along certain streams in the spring and autumn communicates the infection, as yellow fever is carried from the sick to the well by the mosquito. He has reported that the disease has prevailed for a century beside the streams infested with the larvae of the fly; that the period of recurrence of the disease is the period when the fly assumes its winged form; that when families move from the infested districts to regions free from the fly, the children born there do not have pellagra even though every other member of the family may be afflicted.

If, after further investigation, Doctor Sambon's conclusions are found to be warranted, one more disease has lost its terrors and one more insect is added to the list of those that must be exterminated or avoided.—The Youth's Companion.

FELLING TREES BY WIRE.

A machine recently invented in Germany by Hugo Gantke, substitutes a steel wire for the axe and the saw in felling trees. The wire is about one millimeter in diameter, and is kept in rapid motion by a small electric motor placed at a sufficient distance to be beyond the radius of danger from the falling trees. The swift motion heats the wire, and it cuts with great facility, producing a slight carbonization of the wood. A trunk 20 inches in diameter can be severed in six minutes. The cut can be made at the level of the ground; or even below it if the surrounding soil is removed.—The Youth's Companion.
