DOMINION SHIPPING RETURNS ANNOUNCED.

Ottawa, July 8—A Government return shows that 294 new vessels were built and registered in Canada last year, the estimate of value being \$1,002,735, and the tonnage registered 22,283. The total number of sailing vessels on the register books at the end of the year was 7,904, an increase of 136.

The tonnage aggregates 750,929 Steamers numbered 3,332, with a gross tonnage of 554,974. The estimated total value of Canadian shipping is \$22,527,870, and 50,070 men are employed.

EVEN HYMNS NOT NEEDED

In the course of an article on the penalty of a captain when his ship goes down at sea, the Toronto Mail says: Of different stuff was a captain of a coast-wise craft which a few summers ago carried a large number of excursionists out from Halifax. On the return trip a dense fog suddenly hid the coast. With all the thoughtlessness of inexperience a party of the excursionists gathered forward of the pilot house and sought to enliven the rather dismal homeward journey by singing hymns. They had hardly begun before the captain appeared

You stop that noise, he commanded, and go aft, and do it now!

They went. When the vessel was safe alongside her pier one of the party, a woman, the sought captain and began berating him for boorishness.

My brother is one of the owners of this line, she said, and when I tell him of your discourteous conduct he will have you dismissed.

When you tell your brother of my conduct, the captain grimly replied, you might add that when I ordered you and your party away from the pilot house I had nothing to guide me but the sound of the whistling buoys, and that if I had allowed your singing to drown that sound the chances are that you would not have had any opportunity of making complaint!

Emperor—"I do not care to hear your proposition, sir. Everything that is submitted must first be put through the prime minister."

Subject—"Nothing would please me better. I wanted to show you the new bayonet which I have invented for army use."—"Judge"

LAME BACK

Just the Sort of Case That Proves to the World That the Best Liniment Ever Made Is **NERVILINE**

When it comes to determining the real merit of a medicine, no weight of evidence is more convincing than the straightforward statement of some reliable and well-known person that has been cured. For this reason we print the verbatim statement of Juan P. Powell, written from his home in Carleton: "I am a strong, powerful man, six feet tall, and weigh nearly two hundred. I have been accustomed all my life to lift great weight, but one day I overdid it, and wrenched my back badly. My tendon was very sore. To my agony, I had a wrenched or bend was line rubbed on a bottle of Nerviline. I was in one day, and by limbering up, well again. I know of no other possessing one-half the penetrating and pain-subduing properties of Nerviline. I urge its use strongly as an invaluable liniment and household cure for all minor ailments, such as strains, sprains, swellings, neuralgia, sciatica, lumbago, rheumatism, and muscular pain."

No better medicine for curing pain was ever put in a bottle than Nerviline—over one million bottles used every year—better try it yourself. 25c or five for \$1. At all dealers.

LETTER NO. 4769

WARMER WINTERS ARE PREDICTED

LONDON, July 3.—"Why We May Expect Warmer Winters" is the comforting title of a pamphlet published by Major R. A. Marriott.

"Capt. Scott writes Major Marriott, 'on his return from the Antarctic expedition, emphasized the rapidity with which the South Polar ice was retreating. It is a well known fact that in the northern regions a similar condition of things is taking place.'

"In Canada certain lands bordering on the north have been hitherto reported too icebound for agricultural operations, but large tracts have now been found to present favorable climatic conditions owing to some change that has taken place.

Iceland now bears its name, for in mid December, 1910, there was no snow and scarcely any frost.

Major Marriott suggests that the change is due to the diminishing obliquity of the earth's axis.

In two diagrams he depicts the world at different stages of its history first in the year 1354 B.C., when the globe swung at an inclination of 35 degrees. The polar regions then occupied a far greater extent than they do to day and the glacial epoch was reigning over the earth. The other diagram shows the present obliquity of 23 degrees, with the polar regions considerably shrunken.

"The year 2295 A.D.," continues Major Marriott, "marks the apex of the general period, when the contrast between Summer and Winter will be least. This year is only 385 years ahead of us, and we might reasonably expect each century of approach to show some slight modification of climate."

ROD AND GUN.

Following the Fur Trails a story of the far West of interest to every Canadian opens the July number of **ROD AND GUN IN CANADA** published by W. J. Taylor Ltd., Woodstock Ont. In this story Mr. K. J. Fraser who is engaged on the Hydrographic Survey relates interesting incidents of the eight months' stay of the party engaged in survey work in the neighbourhood of Hudson Bay and tells of an attack upon the Camp of Polar bears. He gives particulars of the fine trapping in which the party engaged and the excellent results of this portion of their work. The strenuous outward journey from Fort Nelson to Winnipeg supplies excellent reading. There is much variety in the other stories both fishermen and hunters receiving due attention and stories and experiences from the far East as well as from the far West are included. They hunt on horseback in British Columbia, showing the difference in the conditions between those prevailing in that Province and those existing in Eastern and Central Canada. There is much more of interest to every sportsman in this number. It should be found in every summer camp no pleasanter companion for whiling away a pleasant hour is needed.

LITERARY DETERIORATION (Womans World)

We have never had so many books and never so many bad books. The existing standards of literature are distinctly below those of the two preceding centuries. We have so many periodicals of so many sorts the demand for essays and fiction is so insistent the manufacturer of books has become so commercialized and there are so many unfit in competition with self-respecting publishers, that writers who could not have marketed their output fifty years ago find ready acceptance of their drivel and trash. We could readily dispense with nine tenths of our current writing. Good literature is only possible through great patience long reflection and exquisite handicraft. It necessitates constant elimination research and thought. Had Fleet Street set as low a standard as that of our present day editors we should never have possessed the glorious heritage of the Addisonian period.

A MARVELLOUS FIGURE

One of the most marvellous workmen in the world is Hanamura Masakichi, of Tokio, Japan, who has carved a figure in wood so like himself that when the two are placed side by side it is said to be almost impossible to tell which lives and breaths and which does not.

By several connoisseurs in art this wooden figure has been pronounced the most perfect and human image of man ever made. Masakichi has faithfully reproduced every scar, vein and wrinkle to be seen on his own body. The figure is composed of two thousand pieces of wood, dovetailed and jointed with such wonderful skill that no seams can be detected.

Tiny holes were drilled for the reception of hairs, and the wooden figure has glass eyes

Packed in 1 and 2 pound cans only. 12¢
CHASE & SANBORN - MONTREAL.

and eyelashes in which no dissimilarity to Masakichi's own can be detected.

The Japanese artist posed between two mirrors while modelling this figure, and for some time after its completion he posed frequently beside it, to the confusion of spectators, who were often entirely at a loss as to which was the artist. The figure stands with a little mask on one hand and an instrument for carving in the other; the lifelike eyes are apparently gazing at the mask, and the face wears a look of intense absorption.

Canadian Pacific To Enter Montreal By Tunnel

Montreal July 6—It was officially announced today that the Canadian Northern Railroad has secured financial backing for the entire route from the Pacific to the Atlantic. It was also announced that within thirty months the railroad would enter into Montreal by tunnel and erect a magnificent central station.

NOT OF HIS SCHOOL.

Even philosophy is not without its humor. In Boston last winter during the course on Plato given by the well known lecturer, Howard Griggs, a young man was observed one evening to whom the subject was evidently "all Greek." But as other people were taking notes he also wrote down as many of Mr. Griggs' winged words as he could catch, and then at the close leaning toward his next neighbor, asked confidentially, "Who was Plato, anyway?" He was, however, gone one better by the proprietor of a small bookstore in Cambridge, Mass., with whom proximity to America's famous seat of learning seemed to have bred contempt. While reading over the placard announcing Mr. Griggs' course on Plato, he remarked: "Plat-to, Plat-to, where the mischief have I heard that name before? Oh, I suppose he's one of those old fools over at the college."

NEW YORK SUFFERS FROM TERRIFIC HEAT.

New York, July 10—An unterrified heat wave that showed no consciousness of having been broken last week returned with sunrise this morning to claim new dominion over the city and its exhausted millions. The thermometer at 3 o'clock a.m. registered 93 degrees, and a stifling humidity made the heat more difficult to support. Prostrations began to come in with the earliest police report. Two deaths occurred during the night. The tremendous demand for milk and ice has made both scarce and prices have risen.

THE NATIVE ANIMALS OF AUSTRALIA.

All the native animals belong to one order marsupialia, having marsupial bones, and most of them a pouch in which the young are kept. When Captain Cook landed in Australia he asked some aborigines what the curious jumping animal was. They replied Kangaroo, which means, what did you say? Hence the name kangaroo arises from a misunderstanding.

The kangaroo the most interesting of the native animals has a deer like head short fore legs long hind legs and a strong tail. The latter enables it to take prodigious leaps. Its pouch is large in comparison with other marsupials. The koala, or native bear (which is more unlike a bear than the wombat), is a comical stout bodied animal with fur of a greyish color. It loves to cling to a forked branch of a gum tree and browse around.

it has been known to stay on one tree for days. The young one clings to its mothers back. The wombat is a burrowing animal, slow and very heavy. Its flesh is good eating, and the fur is of a brownish color. The pouched mole has only been known lately. The bandicoots are harmless, and resemble rabbits. The arboreal marsupials are opossums, koalas, and phalangers. The latter have skin stretched between the fore and hind feet which enables them to leap from tree to tree. The most remarkable are the platypus and echidna which both lay eggs. The former a beak and webbed feet like a duck, a body like a mole, and lives in water. The echidna has spines like a porcupine. The dingoes are non-marsupial, and are believed to have been imported. They live in packs and are very savage. The native cats are small, spotted animals destructive to fowls. The Tasmanian wolf is the tiger of the colonists and with the Tasmanian devil causes great havoc among sheep. The aborigines hunted the native animals very skillfully with tomahawks, boomerangs, and woomeras. All the native animals are now protected by Government, but it is said to be thought they are slowly dying out. —By Ernest Moore, in the Australasian.

A TRIBUTE TO LONDON POLICE

This tribute to the London police force is paid by a correspondent of the New York Post, writing from London:

A starved-looking woman with a child in her arms stood on the curb of Pall Mall, while glittering troops and dignitaries in gold lace marched past. It was the day of the royal progress, the day after King George was crowned in Westminster Abbey. A policeman stood between the woman and the "thin red line of eros" who guarded that side of the route. She began to fidget uneasily, looking at a friend across the street, and the policeman, turning, saw what she wanted.

A group of Far Eastern potentates, with fantastic clothing and headgear had just gone by; a troop of Royal Light Horse was coming on behind, only a minute or so away. The policeman took the woman's arm, guided her between two of the red coats, and escorted her carefully across Pall Mall. A moment later after he had recrossed, the gorgeous body of cavalry stamped majestically between the waiting lines.

For the American onlooker this incident epitomized the whole story of the London police's success in handling one of the greatest crowds that ever gathered. I do not believe the thing would have happened in New York, and I have seen many parades here. We hear of the "rule ridden" people of European countries of the elasticity and adaptability of American institutions. At the coronation the police seemed to be following no rules whatever or else disregarding them with perfect discretion at exactly the right time.

FORTUNE OF THE LATE QUEEN DOWAGER OF CHINA

Seattle Wash July 7—According to Chinese papers received to day it is creditably reported in Peking that that fortune accumulated by the late Empress Dowager Tze Hei which amounts to between \$25,000,000 and \$30,000,000 chiefly in gold bars has been shipped to England whence it will be transferred to a bank in Brussels for investments.

Since the death of the Empress Dowager the treasure has been stored in the palace under military guard.
