TORONTO, ONT.

Suffragettes Get Light Sentence

Aberdeen, Dec. 5.—A number of suffragettes who annoyed Chancellor of the Exchequer Lloyd George during his recent visit to this city were arraigned in court yesterday on various charges. Three women who hid themselves in a box in the organ loft at one of the chancellor's meetings and created a disturbance, were sentenced to five days imprisonment. As they were led from the court room they shouted defiantly: "No surrender, we'll protest in prison!" Another woman who had smashed a window in an automobile in which she supposed Lloyd George was riding demanded that the chancellor be called as a witness. The demand was refused and she was sentenced to a fine of 40 shillings (\$10) or ten days' imprisonment. This woman clung to the dock after she had been sentenced and had to be removed by force amid cries of "shame" from the other suffragette in the court room.

It is estimated that the United States Congress will be called upon to appropriate the huge sum of \$220,000,000 this session for the payment of pensions to war veterans and widows of veterans.

All children under sixteen in the elementary schools of Pennsylvania shall be compelled to pass the fifth grade before being allowed to go out into life, according to an important plank in the child labor restriction bill which the Pennsylvania Child Labor Association will send to the Legislature this winter.

Why Hesitate

An Offer that Involves No Risk For Those Who Accept It

We are so positive our remedy will relieve constipation, that we offer to furnish it free of all cost if it fails.

Constipation is caused by weakness of the nerves and muscles of the large intestine or descending colon. To expect relief you must therefore tone up and strengthen those organs and restore them to healthful activity.

We want you to try **Rexall Orderlies** on our guarantee. They are eaten like candy, and are particularly ideal for children. They act directly on the nerves and muscles of the bowels. They have a neutral action on the other organs or glands. They do not purge or cause any inconvenience whatever. They act to overcome chronic or habitual constipation and the various associated or dependent chronic ailments. Try **Rexall Orderlies** at our retail stores. Two sizes, 10c and 25c. Sold only at our store—The Rexall Store—E. W. Mair

Insanity.

By Dr. J. M. Drummond.

Recognition and care of those mentally afflicted.

The care and treatment of our insane is a question which ought to interest every physician and taxpayer in the country. We have in round numbers, in the various asylums and institutions where the insane are cared for, about four thousand persons, necessitating an outlay of about three quarters of a million dollars for care and treatment. Not only is the question one of interest from an economical standpoint but it is one of the utmost interest; sociologically. Insanity in some form permeates all classes of society, no one can claim exception. No disease is so far reaching in its effects nor involves a wider range of interest regarding individuals, families, and even communities. For the individual social and business relations are at one seriously involved; for the family, the dearest ties on earth are disturbed; in many instances there is personal danger, and it may be the removal of the head of the family to the care of strangers, with the consequent loss of incomes and necessary expense, and, unfortunately, the stigma wrongfully attached to persons, and even families, known to be tainted with mental disease. However, whether treatment be administered, at home or in a public or private institution. There is involved an expenditure of a large sum of public and private funds.

There is, perhaps, no disease which when it attacks any member of a family, creates so profound an impression. Take, for instance, the mother with child, it may be her first or it may be her sixth; the child is born and the physician and friends are looking forward to a speedy recovery, when like a thunderbolt from a clear sky, the friends joy is turned into intense anxiety. In this hour of sorrow, the family look to the physician for counsel and advice.

SYMPTOMS.

A week or ten days after parturition the patient's face becomes pale and careworn in appearance; the eyes unnatural in lustre; skin moist, tongue coated, breath offensive, lochia suppressed, temperature high patient becomes restless, attempts to jump out of bed or window conversation incoherent. There are a few of the premonitory symptoms which call for prompt recognition by attending physician.

O. A. Hodgins, Prin.,
Houlton, Me.

We have to look upon insanity as a disturbance of the intellectual aries of the brain, manifested by partial or complete derangement of the mental faculties.

A derangement manifesting itself in methods of thinking, feeling and acting which are unusual to the individual when in mental health. There is no common standard of sanity, by which mental aberration can be judged, because no two individuals act and think alike. No individual can be called insane because he differs mentally from others. Every individual has his own standard of mental action, and can be considered only when he departs from his own standard, when normal mental action is supplanted by abnormal mental action or when, in common parlance, he is "off his base."

Insanity may be considered a relative condition. If activity and skillfully treated within the first month 70 per cent of those attacked may be cured, but if not treated until the sixth month of the disease only 20 per cent can be cured and for each subsequent month the ability diminishes. After the first year not more than 10 per cent recover, and after the second year and until the twentieth year of the insanity an exceptional recovery may occur.

Particularly, however, insanity may be regarded as having little hope of recovery after the first year.

Seventy-five per cent of cases in hospitals for the insane occur within eight months from the date of admission of the patients.

By striking an average as regards age, size and form of mental disease. The following estimate is considered as very nearly the average result to be expected in mental disorders; of one hundred persons attached for the first time by insanity, twenty will eventually die insane; thirty will recover and die sane; twenty will recover but will relapse and will be among the twenty to die insane fifty will not recover at all. The hope of recovery diminishes with each successive attack. The majority of first recoveries even have a slight impairment of the intellect. It has been estimated that the average life of the insane is about twelve years. By the methods adopted through Spinal Adjustment the per cent average 90 per cent taking it all through.

WORK ON THE VALLEY RAILWAY

Mr. A. R. Gould, President of the St. John & Quebec Railway Company, is at the Barker House, having arrived from Presque Isle last evening. He said today that there were 1500 men now employed on the St. John Valley Railway construction and he expected work would be carried on an extensive scale during the winter.
Gleaner Dec. 3rd.

Taking Care of the Motherland,

It has been said that one of the evils of Imperialism is to divert the attention of colonials from their own affairs, which tend to be regarded as insignificant and unworthy. The rivalry of the Canadian newspapers, stimulated by the Imperialism of the moment, gives us daily a vast quantity of English news and comment not remarkable for its truth or wisdom and forcing, it must be, Canadian news and discussion aside.

THE WORLD'S LUMBER.

Immense Productivity of the Tropical Forests.

Certain foresters who have recently been looking into the wood conditions of the tropics have brought back word which should serve to cheer the lumbermen and the paper manufacturers. One English investigator, Dr. H. N. Whitford, says we have a dim and hazy appreciation of the wonderful forests of the tropical and semitropical countries. In our own Philippine Islands there are 25,000,000 acres of virgin forest so heavily grown with timber that it has been estimated that they would produce no less than 200,000,000 board feet of timber. The United States forest reserves probably amount to 200,000,000 acres of land, and yet these would not produce at the highest estimate more than 400,000,000 board feet, which shows how much more productive the tropical forests are.

An acre of Philippine forest, in other words, will produce four times as much wood as an acre in the temperate climate of the North American continent. When one thinks how many thousands of square miles of virgin tropical woodland there are in the interior of Africa and South America it scarcely seems time to despair utterly. Lumbermen will soon exhaust all the available timber in this country if there is no provision made for renewing the supply, but when they learn to draw upon the tropics for their supply there will still be enough wood left in the world to supply kindling and timber until our forests can be regrown.

POUND SEVENTH VERTEBRA.

Japanese Method of Resuscitation in Cases of Drowning.

An English scientist, Professor A. Abrams, has recently been making a special study of the semi-miraculous restoration to life practiced by the Japanese, and, while he does not fully explain why the men come back to life after being to all intents dead, he does tell how it is done, and this in itself is interesting. In Jujitsu if a man is knocked out, beaten senseless, killed or otherwise mauled and if a man has been killed by a sunstroke or by drowning the restorer rolls the patient on his face and extends his arms sidewise. Then he strikes the patient on the seventh cervical vertebra with his wrist severely and regularly until the patient recovers consciousness. Immediately he is placed in a sitting posture, his arms rotated, and he is aided in walking, for otherwise he relapses into unconsciousness immediately and in some cases dies at once.

This system of pounding the seventh vertebra has been found peculiarly beneficial in some acute heart diseases, and the effects of the treatment under Japanese manipulation seem almost miraculous at times. As yet there seems to be no clear medical explanation of the effects of pounding the seventh vertebra, but the genuineness of the cures and resuscitations frequently described by travelers is now scientifically established by Professor Abrams' investigations.—Chicago Tribune.

Why Building Stone Crumbles.

The crumbling of building stones is another form of decay that we are to attribute to the action of microscopic organisms. At a recent museum conference at York, England, Dr. T. Anderson showed that stone decay is not due to wind action and expressed the belief that it is not surface action at all, but a kind of rot produced by some low form of life like the molds and fungi that rot wood, canvas and other vegetable materials. Treatment based on abrasion or chemical theories having failed, he sought a cure of the stones by the use of various germicides. The result has been as anticipated, and in the two years since the experiments began the stones that have best resisted decay have been those that have been treated with sulphate of copper, bichloride of mercury and creosote. For a test of this kind, however, the time is too short to justify any definite conclusion.

Electricity and Plants.

The simplest of all methods of applying the supposed stimulus of electricity to growing plants appears to be that of M. Basty of Antwerp, Belgium. He sets upright in the ground metallic rods furnished with unoxidizable points and penetrating to the depth of the roots of the plants to be treated. These miniature lightning rods are supposed to collect atmospheric electricity and conduct it into the soil. The area of action, M. Basty calculates, is a circle of radius equal to the height of the rod. As many rods as needed may be employed at proper distances apart. As applied in a garden at Antwerp for several years past this method is credited with having increased the yield of lettuce, strawberries and similar garden products from twofold to fourfold.

Dreadnoughts of Small Size.

In these days of 32,000 ton Dreadnoughts it is interesting to note how much can be done on a limited displacement, as shown in the case of the three small ships of this type which are being built for Spain, says the Sci-

TWO POINTERS ON HOW TO CURE A COLD

When you begin to sniff and feel a burning sensation in the nasal passages, or when a tickling irritation in your throat starts you coughing, the first important thing is to act at once. It is the neglected cold that becomes troublesome and dangerous.

The second important thing to do is to take Na-Dra-Co Syrup of Linseed, Licorice and Chlorodyne, and keep it up till the cold disappears entirely.

Na-Dra-Co Syrup of Linseed, Licorice and Chlorodyne is absolutely free from harmful drugs, and can safely be given even to moderately young children. It is pleasant tasting and quick acting, promptly relieving the irritation of the throat and nostrils, loosening the mucus, promoting expectoration, and checking the cold.

Your drug gets Na-Dra-Co Syrup of Linseed, Licorice and Chlorodyne in 25c. and 50c. bottles, or can quickly get it for you. Compounded by the National Drug and Chemical Co. of Canada, Limited. 315

entific American. Though these vessels are of but 14,700 tons displacement, which is less than that of the Connecticut, they will mount eight twelve-inch 50 caliber guns of the most powerful type and twenty four-inch guns and will carry an eight inch belt, tapering to four inches at the ends, and they will have eight inches and ten inches of armor on the turrets and barbettes. With 1,900 tons of coal they will have a radius of 5,000 miles at 10 knots.

The agencies of debate here are, therefore, insensibly influenced to disregard purely Canadian problems or to make of them a mere peg on which to hang a borrowed discussion. If the evils of veteran land grants in the north or of a stupendous land boom are raised, we fall into abuse of the English squire, whose park is untaxed and unproductive. Relief of the English poor engages our study. We adopt their neglected children and beg Mr. Kelso not to publish his raids into our bad lands for our own neglected children. A social revolution in rural Canada disorganizing the churches and enfeebling the schools passes unheeded. Devoted to the care of the motherland, we have no worthy problems of our own.

Surely sentimental travellers and writers have exaggerated the seamy side of English life. If a thousand idlers from the taprooms of London and Manchester, who crowd the curb to gap at a procession of colonial editors, are toothless and rheumy-eyed, they are but a fragment of a busy people. If a few hundred drunken wrecks sleep in the parks and under the arches of London Bridge, millions sleep comfortably and well fed in their beds. It must be so, because the people, though still colonizing the world, increase in numbers; their wealth increases enormously; they administer their own affairs with skill and maintain an undiminished influence in the affairs of the world. Further, in these days of easy travel, they prefer home to the world's favored places. They appear to be quite able to settle with the English squire and to effect a better distribution of wealth. At all events they are not in need of colonial money or solicitude which may be better employed at home.

—Toronto Weekly Sun.

WILL SET GOOD EXAMPLE.

(Bideford, Me., Journal.)

William Howard Taft, when he leaves the presidential office, will be in a position to perform a task which he can be depended upon to do well. He will give the country an example of a dignified and contented ex-president, something we have not seen since Grover Cleveland died.

Chicago has been horrified by the report that 1,000 carloads of potatoes have been dumped into a gravel pit near Elgin, Ill., because the price is too low. Meanwhile the officials of the city's united charities report some 18,000 families in Chicago that will need from six to eight bushels of potatoes each within the next few months.

MARRIED

PARKER-SHEPHERD.—At the Baptist parsonage, Andover, N. B. by the Rev. Wm. M. Field, on Saturday Nov. 30th Perley Parker, and Christie F. Shepherd, both of Caribou, Me.

LANGLEY-WARK.—At the home of the bride Andover, N. B. on Wednesday Dec. 4th by the Rev. Wm. M. Field, Ira C. Langley, of Easton, Me., and Grace M. Wark, of Andover, N. B.

MCKEEN.—At the residence of Mr. Charles Dickinson, on Monday night, after a long illness, Calvin McKee. Funeral service was held on Tuesday evening at the residence of his brother Charles McKee and the remains were taken to St. Andrews on Wednesday morning for burial.
