## Automatic Telegraphy

### Toronto News.

The Canadian Pacific Railway's Telegraph Department has installed a new system of automatic telegraphy between Montreal and Toronto which is likely to revolutionize telegraphy in Canada. If it proves to be as successful between these two points as experiments so far would indicate, it will soon be extended to all parts of the system.

The system, known as the Morkrum, has been the subject of thorough investigation by the telegraph officials and during the past week has been operated daily in Toronto. Those in charge are delighted with the success attained.

The Morkrum automatic telegraph is a printing machine based on a selector system. The transmitter operates a keyboard similar to that of a typewriter at one end and at the other is a typewriter into which a roll of perforated message blanks is automatically fed. The operator in Montreal strikes the keys of her typewriter, prints the message in Toronto and there you are.

The development of the automatic telegraph has been very rapid during the past few years and is rapidly changing the telegraph office of to-day. Instead of highly skilled specially trained men and women signalling the intricate Morse characters to one another, girls working a typewriter now hurl messages through space, and instead of using experienced operators who require at least three years to become proficient for heavy wire work, a school girl will suffice. Instead of paying from \$75.00 to \$80.00 per month for first-class operators, a \$30.00 per month typist is hired. It is said that on the C. P. R. Montreal-Toronto circuit alone the labor saving will approximate \$400 per month by supplanting eight skilled telegraphers on bonus wires at a salary of \$85 per month, with four girls at about \$30 per month.

That the telegraph will soon be a thing of the past is the prediction often heard among railroad officials. The telephone is taking its place for both railroad and commercial work. For example, the C. P. R., which used the telegraph exclusively for train dispatching a few years ago, has transformed almost its entire line to telephoning, thereby abolishing over 1,000 telegraph positions on a single line.

The Pennsylvania Railroad is one of the latest to supplant the telegraph by the telephone and the need for nearly 3,000 telegraphers is done away with. The same may be said of the Burlington, Illinois Central, Santa Fe and many other large systems of railroads.

It is true that this change did not deprive the telegraph operators of their positions, since they were needed for telephoning, but the secret of the change lies in the future. It takes from one to three years to learn telegraphy, anybody can use the telephone.

# WHERE DO YOU LIVE?

Never mind where—distance or direction does not matter if you have a telephone. Call our number, tell us your wants, and we will send you the goods right away. We have a service that always satisfies you, saves you time, trouble, and worry, and costs you nothing extra. Isn't it worth utilizing?

## Panama Canal And Canadian Trade

Montreal, Aug. 8.—Discussing the much debated question of what value the opening of the Panama canal will be to Canada, Mr. D. W. Campbell, Canadian representative of the Elder-Dempster steamship line, declared this morning that his experience during the past six years of traffic via the Tehuantepec route to Vancouver and other British Columbia points from Montreal and St. John, N. B., had impressed upon him the fact that the placing in operation of the "big ditch" would, to a very small extent, if indeed at all, benefit the manufacturers of this country.

Mr. Campbell said: "We have secured each month in the summer an average of about 300 tons, but in the winter the only shipments we obtain for British Columbia points are a few tons of nails or a few canned lobsters shipped from Halifax. It must be borne in mind that shipments originating at points west of Belleville have to bear the local rail rate in summer to Montreal and in winter to St. John. Add this local rate to the ocean freight from Montreal, via either the Panama canal or the Tehuantepec route, and it will be found that when the insurance and the much longer time in transit are also added, that manufacturers and receivers will in the majority of cases, even if they have to pay 5 or 10 cents per 100 pounds more, order their goods shipped all rail."

Mrs. Eugene Kneeland, of Minneapolis, Minn., arrived in town Thursday after quite an extended trip, having visited Chicago, Hamilton, Toronto, Niagara Falls, Buffalo, Boston, Auburn and Searsport. While in Hamilton she was the guest of her sister, Mrs. Beatrice McWhirter. She will spend a few weeks at the home of her mother, Mrs. Wm. McKinley, and visit Presque Isle before returning to her home in the West.

## FARM LABORERS.

Throughout the West the prospects for a bumper harvest was never brighter, and if climatic conditions continue favorable, Canada can boast of the greatest harvest yet produced. The great difficulty will be the securing of sufficient help, as with an expected yield of 200,000,000 bushels, it is figured that at least 50,000 harvesters will be required. There will be an abundance of work for all, and the obligations of the railway in the matter of carrying harvesters to the West are being vigorously urged by the farmers. The excursions will leave the provinces Aug. 12th and 28th. See advertisement.
