Home-mixed Fertilizers Prove Cheaper and Better

In order to prove to the farmers of this province that they can get a better and cheaper commercial fertilizer by buying the necessary fertilizer materials and doing their own mixing, H. B. Durost of the Staff of the Department of Agriculture carried out the following experiments during the past season.

At twelve different points in the counties of York, Carleton and Victoria arrangements were made with a farmer to use a mixture, made from the standard fertilizer materials, against the brand of factory-mixed goods he happened to be using. In this way the home-mixed fertilizer was put into competition with a number of the various "makes" on the market.

Enough of the materials were used in each case to make the equivalent of a half ton of the factory-mixed brand. The materials were mixed on the farmers barn floor. The home-mixed "brand" was then used on an equal area, and beside a half ton of the factory mixed goods.

The prices as quoted in the table are for the "raw" materials, the cost at point of shipment plus the cost of freight and handling. The prices quoted on factory-mixed goods are those paid by the farmer to his local agent.

These results as shown in the table below are as accurate and reliable as field tests can be and should convince the most skeptical that it is both practicable and profitable to buy fertilizer in the "raw" state and do the mixing at home.

For further information re the home mixing of fertilizer, write Mr. Durost at Woodstock, N. B.
