"Safety"

is one of the prime considerations in filling prescriptions.

No matter how honest the druggist who fills the prescription may be—

If he is not careful to the utmost degree—if he does not scrupulously measure every ingredient to insure exact proportions—if he does not conscientiously and systematically check and recheck every detail of his work in filling the prescription, it may not have just the effect intended by the doctor who wrote it.

We take no chances. We start right by using only those drugs that are proven by careful test to be fresh and of perfect purity and full strength. We use only the highest grade and most accurate scales, graduates and other prescription instruments. We check every ingredient off the shelf, check it again when it is put into the prescription, and again when it is put back on the shelf. We don't guess at it.

We know when the prescription leaves our hands that it is filled right.
