THE DISPATCH OFFICE

PRODUCTION: CANADA'S GOLDEN OPPORTUNITY

Increased Production of Live Stock
Canada's Greatest Asset—Build
up Your Reserves

The increased cost of live stock is due to under production. The increase in cattle has not kept pace with the increase in population in the principal cattle raising countries, excepting Australia. Farmers tell us they have found dairy work, and some other productions of the farm, more remunerative than raising live stock, and that those conditions have tended to a falling off in the supply of cattle. The conditions here described are more marked in the United States. There between 1909 and 1913 the population increased 30 per cent. In Russia, Argentina, and Brazil there were also decreases. In France, Germany, the United Kingdom, and Austria-Hungary there were slight increases, but only in France at the same ratio as the population. In Australia alone was there relatively a greater growth in the number of cattle than of people. In Canada the population during the period mentioned increased 35 per cent. but in cattle only 20 per cent.

Opportunity Waits

Those facts are surely pregnant with significance of the opportunity that lies before Canada in the breeding of cattle.

With the foregoing outline of home matters before them it is hard to believe breeders will fail to recognize the profit that will likely accrue from increased production in all lines of live stock. If, with the present difficulties, it is surely reasonable to expect that its activity will be greatly accelerated when the warring nations shall have reached an agreement, and decimated flocks and herds have to be renewed and revived.

Reputation For Canada

When that good time arrives, not only the twenty million men under arms, but a large part of the general population of Europe will hail with eager anticipation the chance to once more enjoy fresh killed beef, mutton, and pork. Breeders, too, will hasten to restore their vanished or decimated stocks. A dozen countries will then clamor for cattle, sheep and pigs. Canada, with her channels of supply open, with her nearness to the sources of demand, will then be in the most favored position to avail herself of the situation to the full, and to obtain a reputation that will last, Canada must build up her reserves now.

Waste in Potatoes

Enormous waste is caused both in the peeling and nutritive value by the peeling of potatoes before cooking. There are thousands of pounds of potatoes wasted every day through the peelings. To be convinced of this it is only necessary to note the bulk of the peelings when you peel the potatoes before cooking. But this is not the only waste. When peeled potatoes are boiled in the ordinary way, there is a loss of nitrogenous and saline matter by extraction into the water, which does not occur when potatoes are boiled in their skins, or baked.

Northern Potato Seed Best

Authorities agree that northern-grown seed will give the best results in old Ontario and that immature seed does better than mature seed. "In parts of Scotland," said Professor Davits of Guelph, speaking on this point, "they grow an early crop of potatoes and then plant a later crop for seed purposes, and they find that the immature potatoes make the best seed, and the same result has been found at the college; potatoes not fully matured make better seed than a well matured potato."

Arm is For Food

A rather curious fact is that the bones of the arm are arranged primarily for the purpose of carrying the hand to the mouth—food being, of course, the first necessity of life. If you do not believe it, try it for yourself and see how much more naturally, when your arm is bent, your hand moves in that direction than it

TO BEE-KEEPERS

There is considerable difference in time from the laying of the egg in the various cells by the queen to the fully developed bee in the imago stage.

The egg deposited in the queen cell passes through its several stages to the matured queen in 15 days.

The egg in the worker cell becomes a full-grown worker bee in 21 days.

The egg in the drone cell takes 24 days to become a fully developed drone.

The Queen bee leaves her cell on the 16th day.

The worker leaves its cell on the 22nd day.

The drone leisurely comes forth into the world of life on the 25th day.

The queen flies on the 21st day and the worker and drone on the 28th day.

There may be a little difference in time when the several actions take place within the hive, but the student can rely on the above mentioned times.

FEEDING MILCH COWS

Judgment in Feeding Will Result in Profit

The law of diminishing returns applies nowhere more truly than in the feeding of dairy cattle. The more food eaten and digested the greater the flow of milk, is an infallible rule in dairying. But there is a point where the increase of milk will not be sufficient to defray the cost of the extra food. This point depends entirely upon the relative cost of the feed as compared with the market value of the milk, cream, butter, or cheese.

Thus it follows that if a farmer feeds all his herd alike, irrespective of their capacities for producing, he is bound to suffer considerable loss. The cow's capacity for producing milk is limited. It is doubtful if a maximum yield of milk is ever profitable from all the individuals of an average herd.

The liberal use of concentrated foods will increase the flow of milk, but it will not convert a bad milker into a good one. But it generally pays to give a good milker a reasonable amount of cake and meal. Unless such an animal is well fed she will "milk herself away." The quantity of such feed should be determined and regulated by the yield of milk, the heavy milkers getting an extra supply.

Thus in the feeding of milch cows for profit the law of diminishing returns should always be kept in mind. If an accurate record is kept of the milk of each cow, and its butter fat content known, little trouble will be experienced in gauging the feed so that a maximum of profit may be gained from the herd.

A BATH-TUB HINT

Toy Balloon Put to Work—As it Goes up Water Goes Down

Regulating one's bath with a toy balloon has a rather queer sound when put into words, but if put into practice it would prevent the overflowing of the bath tub. There are any number of times when it is not possible to stand by while the bath tub is being filled to watch and turn off the water before it overflows the tub. And there are many times when one stands by when one could be doing something else.

Therefore enter the toy balloon as the bather's little helper. Attach the balloon with a string to the plug in the bottom of the bath, the string being just as long as the depth of water desired. Then when the water reaches the required depth the toy balloon floats on top and by its buoyancy lifts out the plug and lets the water escape.

MOUNT CAVELL HAS ITS UNIQUE FEATURES

Glacier Upon it Resembles Woman
Reclined in Spotless White—Was
it Selected by Inspiration?

The mountain in Jasper National park that perpetuates the memory of Edith Cavell, the English nurse who suffered martyrdom at the hands of the Germans in Belgium, is a striking pile, whose summit reaches to a height of over 11,000 feet above sea level, and is about 12 miles south of Jasper, from where it can be clearly seen at any time when not obscured by clouds. Its northern face is covered by snows and glaciers, and when lit up by the rays of the sun or moon presents a splendid spectacle, and it is regarded as being a most appropriate monument for the unfortunate victim of Hunnish hate.

Strange Figure

Lying between Mount Cavell and a high, sombre, verdureless mountain, as yet unnamed adjoining at right angles there is a remarkable glacier of immense size, which, at close range resembles the prostrate form of a woman attired in robes of white, with outstretched arms, one extending to the side of each mountain and the feet reaching down to the great ice bed at the foot. This figure creates in the minds of those who see it impressions associated with the supernatural, and it lends an additional interest to the memorial mount.

In Mournful Attitude

On the sameless mountain, which it is proposed to call Mount Sorrow, there is another remarkable figure which nature has carved from the solid rock with wonderful fidelity. It is that of a woman in an attitude of mourning, standing over a fount-like basin. Except at the feet, there is no cleavage between the figure and the mountain, and from the point from where it can be seen best it is startlingly realistic, even to the garments, which look like buckskin, the stone being stained a brownish yellow. The life-like appearance of the figure is so very real that impressionable people will doubtless conclude that it was by no mere chance that the mountain named in memory of the murdered nurse was chosen, but by a providence.

TO LET

To LET.—The very desirable cottage on Maple Shade farm. Possession given July 1. Apply to Mrs. E. W. Williams Maple Shade Farm River Road

Learn Bookkeeping

The Undersigned is prepared to give private instruction in bookkeeping—Evenings.

W. R. JONES
Woodstock, N. B.

House For Sale

Large House 16 rooms with woodshed and barn situate on Broadway near Valley Railway Station. Land freehold, one and one half extra lots adjacent suitable for gardening.

ROBERT L. SIMMS
SOLICITOR
Sentinel Building King Street
Woodstock, N. B.

For Sale

FOR SALE, a piano as good as new. Has been in use only a few years.

Apply to
Mrs. E. W. Williams
Maple Shade Farm
River Road

NOTICE.

A vote of the property holding ratepayers and of all the ratepayers of the Town of Woodstock, upon the question of the said town issuing Debentures of the par value of Fifty Thousand Dollars for the purpose of establishing a Filtration Plant in connection with the water works system of said town, will be taken on MONDAY, the 27TH Day of AUGUST next, at the office of the Town Treasurer in said town. The poll for taking said vote will open at ten of the clock in the forenoon and remain open until five of the clock in the afternoon.

Any information regarding the taking of the said vote will be furnished to the ratepayers at the office of the undersigned.

Dated at Woodstock, N. B., this 18th day of July A. D. 1917.
By order of the Town Council,
J. C. HARTLEY,
Town Clerk.

REPRESENTATIVE WANTED

at once for

WOODSTOCK

and District for

CANADA'S GREATEST NURSER- IES'

Spring 1917 list

now ready

Splendid list of hardy fruit and Ornamental Stock suitable for the Maritime Provinces,

including,

MINTOSH RED APPLE
St. Regis Everbearing Raspberry
and many other leaders

New illustrated Catalogue sent on application
Starting at best selling time
liberal Proposition.
