ALBERTA HAD WORLD'S RECORD WHEAT CROP

Dramatic Features Attended Threshing of Field That Saved the Day—Farmer is Businessman.

A Lethbridge, Alta., writer says: The record has been made in the growing, harvesting, threshing, and marketing of the world's record wheat crop for big acreage and the details are being entered according to a cost system like that of a great factory, while C. S. Noble dictates the story of how he surpassed all records of wheat crops from a farm as big as 1,000 acres. When the last load of grain, hauled by a team of prize Clydesdales, arrived at the elevators, completing a total of 54,383 bushels from 1,000 acres, behind it was a procession of autos filled with members of the Lethbridge board of trade.

How Record Was Made

The story of "How I Did It" includes the use of the most modern methods of business. The telephone at the central office was the main channel for personal directing of operations which covered nearly two square miles and required 120 men. When his presence was required at any place he had a high powered automobile at his door which whirled him there at high speed. It was not many years since Mr. Noble left the United States to make a modest start in Alberta. When he made the record he owned three farms and his crop for the year was worth nearly \$100,000.

Last Field Saved Day

It was threshing time which told the story of a crop record. When the wheat from the last field was reached it was seen that the world's record would be surpassed if this grain threshed thirty-nine bushels to the acre. It went sixty-four bushels and brought the average up to nearly fifty-four and one-half bushels an acre for the entire acreage. There was a throng present and moving pictures were being taken. Suddenly a belt broke and it looked as if the climax would be postponed to another day. But feverish work repaired the belt and the crowd cheered as the last of the wheat came from the separator.

MANITOBA'S PLAN

Government Ground to be Converted into Homesteads

With a view to establishing an ideal community settlement along the Greater Winnipeg water district line, the provincial government co-operated with the G.W.W.D. Commission and acquired from the Dominion Government three and one-half townships in the Birch River district, 72 miles east of Winnipeg. This land will be placed at the disposal of intended settlers, and allotted to them as 40-acre farms. Homestead conditions will apply, but only married men will be given the opportunity of taking up one of these small farms. Very great encouragement will be extended to the men locating on these farms by the provincial government. All preliminary improvements will be made, a school house erected, while the City of Winnipeg purchased the wood from the land in clearing it. J. S. Woodsworth, director of social research bureau for the three prairie provinces, applied his theories of improving social conditions.

The scheme is in the nature of an experiment of one of the popular solutions advanced to meet the problem of handling returned soldiers, and if carried out on a broader scale, with the returned soldiers as the settlers, the district which will be colonized is fertile, and the settlers will be encouraged to go in for small fruit farming, poultry and hog raising. E. W. Kopecki has been appointed land settlement agent, and will also act as business agent in marketing the produce for the settlers.

CHEMICALS FOR POULTRY

Charcoal, Ammonia and Sulphur—How to Use Them

Sulphur is a medicine and not a food. While it is true that it is found in small quantities in almost all grains and other articles of poultry diet, it is not true that it is a food and that it should be fed indiscriminately. The sulphur that is found in grain is usually combined with some other substance to counterbalance it. There are times when it may be fed to fowls, but care must be taken. It should never be fed during wet weather, as it is liable to cause rheumatism or a stiffness of the joints. It is a sort of a blood purifier, will arrest disease, and sometimes invigorates a run-down system. A tea spoonful once a week, in soft food for twenty hens, will do no harm and even this amount should be fed in dry weather. It is better to be withheld from chicks until they are at least three months old.

Charcoal consists almost entirely of carbon, and is prepared by heating wood so as to expel all the gaseous matter it contains. Ammonia is a gaseous compound-alkaline like potassa, and is often termed spirits of hartshorn. If charcoal has been properly treated it would be next to impossible for it to contain enough ammonia to injure animal life. Any impurities charcoal might contain would be more likely absorbed than in atmospheric conditions. There is no hesitancy in using any charcoal which is clean and free from dust.

Old Tea Looks All Right

Old tea and fresh tea, poor tea and good tea, all look alike. No wonder a woman often gets a bulk tea she doesn't like.

Red Rose Tea in the sealed package is always fresh, always good, always worth the price on the label.
