

The LOGICAL Treatment for RHEUMATISM, SCIATICA, Lumbago, Constant Headaches, Urinary Derangements, and all Kidney and Bladder Troubles.

Short Day of Triumph Near End

Stockholm, Nov. 13.—The Bolsheviks' short day of triumph in Russia is rapidly nearing its close, in the opinion of Mr. Goulkevitch, the Russian minister to Sweden, who bases his belief on information received from various sources during the past 24 hours.

"Everything is coming out all right," he said. "There no longer is any reason to worry over the situation. All the information that has reached me since Saturday shows that the crisis has virtually passed and that it will be only a short time until the Bolsheviks will have played out their brief role."

The correspondent referred to the fact that the Russian ambassador to the United States had given formal notice of his refusal to recognize the Lenin government and asked Goulkevitch whether he had done the same.

"I have made it quite clear from the first day," the minister replied, "that there could be no question of recognizing the Leninites, but I gave no formal notice to that effect. The whole thing is so absurd and even laughable that I considered it unnecessary formally to give notice of anything so obvious as my refusal to recognize the Bolsheviks."

Stockholm, Nov. 13.—General Korniloff has entered Petrograd, where the garrison, except the sailors, went over to his side, according to a Petrograd despatch to the Social Demokraten on Monday's date.

The foreign ambassadors, the message reports, are now in communication with Gen. Korniloff. Copenhagen, Nov. 13.—Premier Kerensky's troops are in control of part of Petrograd, especially the Nevsky Prospect, (according to a telegram received here. The Bolsheviks are said to have taken refuge in the Smolny Institute.

Buy A Bond

(Without apologies to the New York World)

Hey! You fellow with a Roll Buy a Bond Show your heart is good as gold, Buy a Bond! Victory depends on you Buy a Bond! We have each our bit to do, Buy a Bond! If you are to old to fight Buy a Bond! Swing this cry with all your might Buy a Bond! It will help the chap "out there," And to do so only square, Buy a Bond!

ROD and GUN

Rod and Gun for November, which is now on the news-stand, contains as usual many stories and articles of particular interest to the lover of outdoor life and sportsmen generally. R. J. Fraser in this issue describes the "Joys of the Winter Camp" and Charles Camsell writes of the Wood Buffalo of our North-Western Canadian plains. Fred Copeland tells an entertaining story, "The Dominic's Mascot," and there are many more stories intervening between these and the regular departments devoted to Fishing, Guns and Ammunition, Kennel, Along the Trap Line, etc. The Kennel for this month contains a write-up of the recent Dog shows at Ottawa and Montreal with a list of awards given at each Show. Rod and Gun, is published by W. J. TAYLOR Ltd., Woodstock, Ont.

Among others who seem to have been quite active for years past are the Hohenzollern girls.

WIRE FENCE GATE

Simple Method of Solidly Bracing the Side Posts.

The posts of a gate placed in a straight line of wire fence requires just a much bracing as a corner post. A very effective way and one that will not require much extra material is shown in the accompanying sketch. The two posts of the gate will need to be extra long and well set in the

GATE POSTS BRACED.

ground. The tops of the posts are then tied with wire so as to hold them in a parallel position with the right width between for the gate. The fence wires are twisted tight and held to the posts with staples.—Popular Mechanics.

DEFIED THE KAISER.

A Pilot Who Knew His Business and Had Lots of Nerve.

In a fit of impatience because the speed of his yacht was slowed down on entering a certain harbor, the German emperor on one occasion tried to assert his authority and rang the bell for "Full speed ahead." To his great surprise, the pilot, an old Norwegian named Nordhuns, who knew the dangerous character of the channel, placed himself in the way and, leaning over the wheel, called down the tube to the engine room, "Half speed ahead—never mind the bell!"

"What! You dare to countermand my orders?" cried the impetuous monarch, again ringing the bell.

"Disregard the bell," calmly repeated Nordhuns through the tube.

For a moment the kaiser glared at the intrepid pilot, and then, drawing himself up to his full height, said majestically, "Go below, sir, and report yourself under arrest."

"Leave the bridge!" thundered the Norwegian grimly, as he grasped the wheel more firmly. "This ship is in my charge, and I'll have no interference with my orders from emperor or seaman!"

The officers on deck hurried silently aft, wishing luck to the sturdy old sea dog, who, knowing that he had the law as well as common sense on his side, stood at his post unshaken by threats, unheeding commands, and steered the Hohenzollern safely into port.

The next day the emperor came to his senses and decorated the pilot with the Order of the Black Eagle, and appointed him his life pilot in Norwegian waters.—Pearson's Weekly.

A Dairyman's Yarn

A bunch of dairymen were together a few days ago, spinning yarn about the cow when one of them sprang this: "We had a cow once and one of the boys by mistake left a can of gasoline stand where she could get at it. She tasted the juice and liked it, so lapped it all up. Some time later we heard an awful commotion in the cowyard. I ran down and saw the cow galloping around, yelling 'Honk, honk, honk, honk!' When I saw the empty bucket I knew that the cow was suffering 'auto-intoxication.' We couldn't get the animal into the barn, so I painted a sign 'garage' and hung it out. In she steered. We had to cut a hole in her hoof to keep her quiet until the effects of the gas wore off. You see, she thought she had blown up a tire when the hoof was punctured."

Poultry Pointers

It is too late to be setting eggs. For this reason it is well to take the male birds out into a pen by themselves.

Throw open the windows every night, but tack some wide-meshed cloth or screen of some kind over them to keep out things that have no business in the house.

Sort the young growing stock as to size, it will give them all an equal chance and you will find they will grow better and less trouble will be experienced.

When there are two pens of fowls in the same house, separated by a partition, the drink dish may be set in the partition so that fowls may drink from both sides. It should rest on a shelf so that it may be easily removed for cleaning and disinfecting.

Fall Plowing Advocate.

It is almost always advisable to plow clay lands in the autumn. If clay land can be plowed shallow soon after the hay is removed it the case of sod, and after the crop is taken off in the case of stubble, it is so much better, as it not only ensures a good reservoir for holding moisture, but also stores up more available fertility than where the soil is plowed in the

MAKING THE BEST OF IT

Use Old Plows to Get Money For Better Ones

If you cannot get the choicest seed, make the best of what you can get, and soon your crop will be better than ever. You may not have the best cow in the world, still, if she is the best you can get, bring out the very best there is in her by good feed and care. He will help you to earn money to buy the better cow you want. Money may be scarce; it often is in the spring of the year. Make every cent go just as far as you possibly can. That is the way to make two cents grow where there was only one before.

Make the best of the old plow, the old harrow, and the old mower, and keep your eye out for better ones, bought with the money these well-worn tools make for you. But don't be satisfied with the things which are not the best of their kind. The best farming is done with the most up-to-date tools, the choicest seed, the finest cows. In every situation, under every circumstance, make the best of present conditions and work steadily toward the very best. Nothing can beat the man who does that.—Martime Farmer.

SENTS OF RUBBER

As Yet But a Distinct Probability of the Future

It is not yet practicable to construct roads with surfaces of rubber except at a cost of \$25 per yard, but there is little doubt that they will ultimately be adopted, says The Canadian Engineer. At the International Rubber Exhibition held in London recently, rubber paving was shown both for use on footways and on carriages. In each case the rubber constituted a surface cushion on blocks of jarrah wood, the material being held tightly in position by dovetailing, while a special joint locked the paving, preventing, when laid, the access of water to the concrete foundations. It is contended that thinner foundations are necessary owing to the reduced amount of vibration which occurs by heavy and fast-moving traffic, and further, that it never becomes slippery and that motor vehicles do not "kick" upon it under unfavorable conditions of weather. A section of rubber paving laid in the Old Kent Road, London, where the traffic is heavy, is not perceptibly worn after a year's use.

Concrete as a Bridge Material

Without an arched support or center pier a single span concrete bridge 64 feet long, strong enough for the heaviest vehicle traffic, has been built in Illinois.

Clipping to Better Nerves

On the theory that mountain climbing develops the nerves as well as the muscles a Philadelphia college physical director has his pupils climb the sides of quarries.

SOME HEART BEATS

To live long and well, save your heart by conserving your heart beats. This may be done by avoiding extreme emotion and violent physical exertion and by sleeping long hours. The human heart beats from seventy to 150 times a minute, and each beat means work equivalent to raising a 2-pound weight 1 foot. If this does not seem like work, try to lift a 2-pound weight seventy to 150 times a minute.

Anything that quickens the heart's action increases its labor. Accurate tests have shown that a man riding a bicycle up a 10 per cent grade for 2,004 feet in four minutes adds an amount of labor to his heart that would lift a ton and an eighth 1 foot.

Violent physical exertion of any kind quickens the heart beats. Strong emotion has the same effect. Intense anger may increase the heart's labor from 150 pounds per minute to 225 pounds. Under such a strain the heart of an animal has been known to literally break, causing almost instant death. According to a heart specialist, he who retires to bed at ten instead of twelve saves the heart 376,000 foot-pounds a year. Lying down one half-hour daily lessens its labor in the same period by 219,000 foot-pounds.

DISH DRYER WORKS AUTOMATICALLY

This is a device for letting the dishes dry themselves. Two frames of pine strips are made, each one foot wide and long enough to fit across the kitchen sink. Cross strips are nailed across each frame, these strips being just far enough apart to permit a plate to stand on edge between them. The cross strips on the bottom frame should be nailed at right angles to

the cross strips on the top. Four blocks two inches high should be placed at the corners and between the frames to hold them apart, and the whole should then be nailed together.

After the dishes are washed they should be placed in this holder and then scalding hot water poured over them. That is all that is necessary. The dishes will dry themselves in a short time. The frames can be hinged to the back of the sink, if desired, and raised out of the way when not in use.

An Earthquake's Work

A fortunate landslide in China uncovered a rich deposit of coal many miles from where any coal had been known to exist.

FOR CUTTING MEAT

Any Housewife can Imitate the Butcher's Skill With This Board

While many excellent cooks have envied the butcher and his chopping block, they have also not attempted to install one in their own homes because they fear they would not be able to chop quite so truly as can the experienced butcher.

An excellent way to have a chopping block and slicing board that

KNIFE ATTACHED TO BOARD

also obviates danger to the fingers shown in the illustration. A staple is driven into the board, a staple large enough to be firmly fixed and will leave room for the point of a kitchen knife to pass under it. The staple in place, chopping of all sorts and a great many kinds of slicing can be done, as a very heavy pressure will be applied to the knife.

When Making Jelly

CHEESECLOTH STRAINER ON STAND

Why not have a stand for a jelly bag that will always be ready for use? A few pieces of board nailed together in the manner shown in the illustration accomplishes this nicely, and at little or no expense.
