### GOLD IN ESKIMOLAND

Gundier Aretics

Christian Leden, the Norwegian explorer and ethnologist, who jumped from the smow hute of the Eskimos to the Waldorf-Astoria—"some contrast," he said—brought back from the great Canadian barren grounds northwest of fluction Eay native tales of vast gold deposits and petioleum fields in unexplored regions north of the Arctic

"I lid not see the gold," he said.
"Native friends of mine told me about it, but they did not know it was gold. They were returning from a hunting trap of 700 or 800 miles with some spectment for see, but their dags died and they had to them what I believe to be gold sweet. They told me of a bedge where the motal dropped off in please, and from what they said I phould judge the veins must have been very rich. One of them had a harmon, the point of which was made of the pullow metal. They told me also pulles that he had harmoned in his gun

As for the petroleum, hir Lotter said, the Makizaes adjected saviously to the small of the all although they were necestanced to strong offers that hath He decited to give an illem of the gold deposits when it has be locally of the gold deposits when it has be nay "It would have taken may per years more to have gene altered be gold by Hir. Lotten trave, sel with littles of Makitaes for three years, principally to study the native music, which was not they major nor miner which was not they major nor miner

### EGYPT'S PAPER SUPPLY

rian Land of Phinaphe Boutse Das Flourishing Arts

Playpi once loops the greater past of Plarape supplied with paper. At first, it was made of the collular pith of the papyruse hald in stripe able by side and a farther layer laid above the first securior; the whole was them damped with Mile water and presend. Later the Araba made paper from reas, and smong either namely given to it was "charta cuttures," because it had a cottony appearance, which gave rise to the idea that at one time paper pulp was made here from cotton wool. So south paper was made and expected from Alexandria at one time that the limperor Hadrian was particularly inspressed when he visited the city with the great and flourishing trade in this spitcle. It is strange to reflect that after having been, as it were, the basic material. The question naturally arrives, is it possible for Egypt sees more to make herself at least partially independent in this direction?

### MAN TAUGHT BY BIRDS

Origin of Bactest-making Emplained b. Early Pottery

There has recently been unearthed hear Theben, in Bigypi, what is probably the earliest specimen of pottery extant. It is a small round bowl, in shape, size and exterior markings, an exact replica of a thrush's nest, with the outer network removed. This discovery sets at rest the vexed quosition as to whence man learned the art of basket-making. He learned it from a bird's nest. The clay lined hame of the mother thrush and her family suggested the slay fined basket which held water and also served for cooking.

for cooking.

The banket work, when burned of left a baked clay pet, the outside of which was descrated with an incised banket pattern. Gradually this pattern gave place to painted representations of the original. All archeologist know how predominant this based descration is in early pettery in ligger, Chalden, Grete and elsowhere. And now we know the source whence it came.

A bent valve stem on an automobile inglie invariably will cause trouble by sticking open and thus causing minutesing of the cylinder in which it is spending. In testing for a bent stem, which hardly is noticeable to the eyo, place the valve in its grape and with the foreinger gently lift the stem. It should move freely and drop back to mormal position of its own weight. If it does not, clean the stem and guide and try again. If the stem and guide are clean the former may be best.

Don't fill an oil or gasoline stove at fer dark nor so so while the stove is lighted, as the flame might set fire to the vapour in the air, causing an explo-

ern tribes that crossed the Ural Mounlains, one branch settled in the fertile
plains of Hungary and their descendants are the Magyrs of to-day, those
who pushed on to the Baltic are the

Sweden conquered the Finns after a prelonged struggle, which ended about 1293 and set the noble example of giving perfect liberty to the conquered people. Nothing better could have happened them than the Swedish conquest, Christianity, civilization education and liberty combined have made these wild tribes as highly civilized as any people.

Russia has governed Finland nearly one hundred years, during which time she has gradually fliched away her liber ties. In some respects the Finns are a most democratic people, still they are subject to the Czars veto in matters of legislation.

Finland has a very extensive franchise every adult has a vote and some fifty five per cent of the population are women they really hold the reins of government. Theoretically the women rule the country yet there are only seventeen women in the Finnish Diet. It would be well for the suffragettes of this country to learn, that in getting "votes for women" in Finland not a single bomb was exploded, or a house burned to the ground, or a single win dow broken by a wild and whirling female.

The Diet or Finnish parliament meets at Helsingfors the chief town in the country. It is strongly fortified and is connected with St. Petersburg by a splendid railway. The combined fleets of France and England failed in an attack on Helsingfors during the Crimean War.

## Program for the Mid-Winter-Camp Held in the Salvation Army Citadel, Beginning Saturday January
