MAYONNAISE MIXER

Here's a Hint to Housewives Who Want a Best Result

How many hostesses are there who are forced to apologize for the "curdled" or unmix'd appearance of their mayonnaise dressing because the oil and the other constituents of the dressing have not been properly mixed?

Yet it is a simple matter to have the proper mixture attained if a little mechanical appliance that anyone can secure is used. All that is necessary is a funnel to which an egg beater can be screwed with a shelf far enough under it to hold the bowl in which the dressing is to be mixed and permit the egg beater to reach the bottom of the bowl.

There is a ring on the opposite side of the bracket to which the egg beater is affixed large enough to hold an ordinary funnel. The oil is placed in the funnel and a cork is placed in the small end to regulate the flow to a drop at a time. The other constituents of the dressing are placed in the bowl and the handle of the egg beater is turned. The oil will drop into the dressing in just the proportion desired and the proper mixture is obtained. A hammer, a few nails, a piece or two of wood, screws and a few minutes will do it.

JOY DOWN YOUR IDEAS

They Are Worth Money and May Quickly Slip the Mind

You've had ideas, of course? Brilliant ones, maybe? What's become of them? You will remember them, with a gnash of the teeth, when you read that the idea you let slip went on to someone else—someone who nursed it, developed it, and cashed it! You will look into the shop windows and see the idea that came to you—but which you didn't keep—making money for someone else!

Next time, make a record—and make it at once! Wherever you are—and ideas come anywhere, at any time—make a record of that fleeting thought. Smart men have an idea book, that nothing shall escape them. They build on ideas; it is their valuable raw material.

Track the great inventions, and what were they in origin? Just ideas! Think of the safety-pin. A pin with a covered point, that's all. But a fortune for the maker.

The pneumatic tire. Dunlop watched his boy at play, and suddenly the great idea came to him.

The cork bottle-stopper. Another brilliant idea.

Boots will wear down at the heel. Hence the boot protector—a new idea, and a fortune.

The perforations in the stamp sheets. Just an idea!

Many a workman who has "stuffed" his "idea" into the idea-box in which he works has his own house to-day, and draws a royalty larger than his wages, because he had an idea and did not let it go until he had cashed it! There's always a market for ideas.

Trooper and Financier

Trooper Thos. Duffy, of the Royal Canadian Dragoons, St. Johns, Que., expert sign writer, champion fancy hand-writer of the Dominion, is a man of purpose.

When he found that he could not get his land grant without proving that he was a soldier he enlisted, and after getting his grant watched the price go up from \$100 to \$1,250. At the latter point he sold and took a holiday on his profit.

When the Prince of Wales was at the Quebec Tercentenary, Duffy was his groom, and the now King rode on Duffy's big black horse, Paddy.

FARM MACHINERY

This is an age of improvement. The up-to-date farmer must read and investigate or he cannot be abreast of the times. There is no class of business or enterprise that is moving faster to-day in the matter of improvement than the farm, the appliances and machinery that are used to operate it economically and successfully. The progressive farmer must read, study and observe the things of interest that are being created for his advantage and for the enhancement of his financial interests.

Farm machinery, with its standards prominently in the front and its needs of the farm. It will go to stand back and say, "I have a better idea"—or other piece of machinery—"that is good enough," just because it has been in use only two or three years, when great improvements in operation and perfectness of work have been supplied by later patterns. Be on the lookout for the new machines. Inspect the advertising columns of your farm papers in view of knowing what there is that is new and deserving of investigation and inquiry.

You will find cultivators renegeing shallow cultivation and others deep cultivation. Study their principles of operation and results, and when convinced that they have and are working better than what you have and are working with, estimate whether or not you can afford to keep on using the old machine. Remember that perfect cultivation in the cornfield is the big factor in getting the yield. "These things" are important and cannot be carelessly passed by.—Maritime Farmer.

THE WINTER TERM

of the FREDERICTON BUSINESS COLLEGE opens on Monday, January 7th, 1918

Pamphlet giving particulars of our courses of study, rates of tuition, etc., will be mailed to any address on application

Address: W. J. OSBORNE, Prin. FREDERICTON, N. E.

NESS A SUNBEAM FOR MAGIC LANTERN

It is not necessary to wait for night to use a magic lantern, nor is it absolutely essential to have a lamp to furnish the light. The sun is one of the very best light illuminators in the business and a beam of sunlight properly harnessed, can operate any magic lantern.

The lantern is placed on a table near a window on which the sun is shining. The window shade is pulled down almost to the level of the top of the lantern and the remaining space of the window is covered with heavy paper with a round hole in it that is on a perfect horizontal line with the lamp.

A mirror is then placed outside the window and tilted so that the bright sunlight is directed through the hole in the paper and thus through the lens. That is all that will be found necessary to give the best light for any ordinary lantern slides.

MOUNT CAVELL HAS ITS UNIQUE FEATURES

Greater Type of Mountain Woman Belong to Canadian White-Water Is Coloured by Inspiration

The mountain in Jasper National Park that perpetuates the memory of Mount Cavell, the English nurse who suffered martyrdom at the hands of the Germans in Belgium, is a striking peak, whose summit reaches to a height of over 11,000 feet above sea level, and is about 13 miles south of Jasper, from where it can be clearly seen at any time when not obscured by clouds. Its northern face is covered by snows and glaciers, and when lit up by the rays of the sun or moon presents a splendid spectacle, and it is regarded as being a most appropriate monument for the unfortunate victim of Hunnish hate.

Strange Figure

Lying between Mount Cavell and a high, sombre, verdureless mountain, as yet unnamed adjoining at right angles there is a remarkable glacier of immense size, which, at close range resembles the profile of a woman in a woman's form of a woman attired in robes of white, with outstretched arms, one extending to the side of each mountain and the feet reaching down to the great ice bed at the foot. This figure creates in the minds of those who see it impressions associated with the supernatural, and it lends an additional interest to the memorial mount.

In Mournful Attitude

On the nameless mountain, which it is proposed to call Mount Sorrow, there is another remarkable figure which nature has carved from the solid rock with wonderful fidelity. It is that of a woman in an attitude of mourning, standing over a tomb-like basin. Except at the feet, there is no cleavage between the figure and the mountain, and from the point from where it can be seen best it is startlingly realistic, even to the garments, which look like backskin, the stone being stained a brownish yellow. The life-like appearance of the figure is so very real that impressionable people will doubtless conclude that it was by no means chance that the mountain name in memory of the "dread nurse" was chosen, but by a pre-arrangement.

Using Farm Waste

A farm engine driven by a farm motor has been invented in Canada that is equipped with its own producing plant for making gas from a waste material such as bark, sawdust or dry leaves.

A Huge Crane

The largest crane in the world, located at a Scotch shipyard, can be used at every point within a circle 13 feet in diameter and can lift loads of 200 tons to a height of 149 feet, 15 feet from the center.

Not Yet Explored

It is estimated that there are about 100,000 square miles of land on the earth, the land surface of the world waiting to be explored by discovery.

THE ANIMALS' HEALTH

Quellors in the Toronto Zoo Make Good Patients

"A long way the healthiest I have here," said Mr. E. Goode, superintendent of the Riverdale Zoo, Toronto "is the elephant. We have had him about 100 years, and she has not been sick or sorry once in the 100 years, and then she had only slight cold."

Speaking generally, Mr. Goode was of the opinion that the dentists of the Zoo made good patients. The great majority of them, he was convinced, are more susceptible to pain than are human beings. And he, having nothing like the same apprehension of death or suffering. This rule, however, he made some exceptions. A sick monkey, he said, was one of the most interesting sights of the world. To see a monkey die was pitiful in the extreme. It showed just the same kind of feelings as a human being does.

"I should say that the species of the most delicate of the animals we have here. He has a shorter coat than either the lion or the tiger, and would what affects him. We lost a leopard two years ago from pneumonia. That is really the chief disease of which we stand in dread. On the whole we are extremely free from illness at the Zoo.

Black and brown bears give very little trouble. They are naturally strong. And when they are feeling a little unwell they will eat a good deal of liver oil freely out of a cup.

Beavers are healthy, as well as industrious. But they fight like fury. Where a male and female are together, and have a family, and found a colony, they are all right. But put in a strange beaver among this colony, and they will kill him inside of twenty-four hours. They will cut his tail off and tear holes in his back. And all this will be done under water. I have known a beaver badly mauled and gangrene set in, and he was really dead. And yet he would still keep on diving."
