DA'S WHITE ESKIMOS

Strange, Fierce Habits of Humorous Northern Dwellers Described

After passing three years in the Arctic regions, George H. Wilkins, an Australian who was a member of the Steransson Expedition, arrived in England with a choice selection of stories about the so-called "Blonde Eskimos" with whom he lived a considerable time. "The Blonde Eskimos," he said, "are quite untouched by Western civilization, and their habits and customs are essentially primitive. They are not a long-lived race, and fifty years is perhaps the normal span. Human life is very little valued amongst them, and what civilized people class as murder is regarded as a more or less harmless occentricity."

Visiting a camp where he had nade friends with an Eskimo a few months before and not finding him, Mr. Wilkins inquired after his health. He was told that the man was dead, and the manner of his death was this. One day the Eskimo came across . member of the tribe fashioning a knife But of the native copper whic" is found in this region. He chaffed him, it appears, on his want of skill. "You don't know the first thing about making a knife," he said, in effect. The artificer said nothing until he had finished his work, when, remarking "I think it is a pretty good knife," he plunged it into the breast of the critic. The Eskimos have a keen sense of humor, and this incident was much appreciated.

There is a ceremony of marriage among these Eskimos, but apparently the number of a man's wives is limited only by his capacity to support them. The regular price for a wife is a rifle 1 12 months' hard labor in the serfice of the prospective bride's family. It is only rarely that a rifle can be obtained from the Indians to the south, and the price paid for it, in skins, practically represents a year's activity in hunting. Some of the more opulent Est was possess three wives. One is chosen for her personal attractions, another for her prowess as a hunter and lisher, while the third does the

SOME STRAY PIECES OF INFORMATION

Injections of rattlesnake venom are used to cure epilepsy.

The atmospheric changes during a munder storm accelerate the discharge of all gases and it is now asserted that it is these, and not the electrical discharges which sour milk.

It is asserted that the germs of paralysis find their way to the brain Brough the nose.

The house fly is the principal source infantile paralysis infection.

Hunger makes the brain heavier. A ocientist says that the bassoon

playor is always cranky and the drum her generally lacks humor. Where do the birds die is a ques Mon which has not been satisfactorily

mswered, ... Ithough considerable at ntion has been given to the Latter A statement has been made that life would so prolonged if persons would pequire the habit of stooping by the ps instead of bending the beckbone In Prussia a whole new kind join

a been successfully grafted. Every once in a while lumps of but for are dug up in the Irish bogs which sare said to have been placed there rmany years ago for flavoring or preser vation.

On the last day of each year the forean throws out of his house s itraw image of a man, which is said to carry sins and bad luck with it. Chamicals are more effective in

ALBERTA RURAL SCHUNLS

One of the healthiest signs of progress in Alberta is the continual fornation of new school districts and building of new schools. All over the Province are these sign posts of civiliration to be seen. But neat buildings furnished with an up-to-date equipment are wasted money without the real spirit of education. For many years memory was the only faculty pultivated in a child. Prizes were always awarded for learning by heart tong lists of names and facts. The ch. the height of Mt. Everest, or a Bible chapter repeated backwards were considered signs of great intelligence in the poor little learner. But shildren have come to their own and a glance at the course of studies for our rural schools will show the strides made in the right direction. Nature our children are taught by other ation thee great lessons of nature—the lighty mother of all real L L Wigley.

POISON WARNING

An Atachment to a Bottle Rings a

Some time in the still, dark night somebody, the wife, the baby or yourself may get suddenly ill, and somebody will hurry to the medicine case, or the

pantry shelf, or wherever the medicine bettles are kept. In the darkness a poison bottle may be

grasped and carried to the sick room, and in the hurry incidental to sudden illness a dose may be administeredand a funeral held later on! Or there may be medicines that must never be given to children.

Bell bottles--that's by way of warning. Get a number of tiny bells, and fasten a bell to each bottle containing poison or any medicine which may have a serious affect if taken unintentionally. Possibly a good way-would be to tie two belis to the prison botties, to distinguish the very dangerous ones from the others, the taking of which wouldn't be quite so serious. The ringing of the bell will then prevent you from making a fatal mistake.

A Pocket Typewriter

Just as the pen has veplaced the sword and the fountain pen displaced the ordinary pen of commerce, so the time is probably approaching when the typewriter will send the fountain en back to the scrap bec.p. Some mart and observing person might tate that the time is already here, as typewritten letters and manuscript have practically displaced those writen' by hand. The fountain pen is stil being carried in the pocket, however, and it was against this practice that an inventor has recently directed

Its genius, with the result that a pocket typewriter has been evolved. A young German is credited with the perfection of the newest writing device. It is a folding machine that its maker guarantees to keep in perfect order for three years, and can be car ed in the pocket, requiring no more space than the average watch or tape measure, and a foot rule combin ed. It is provided with a hardle by which it is held with one hand and operated with the other, no desk or table being necessary.

VALUE OF EELS

Hels are not in form pleasing to

the eye, nor do their habits commend them to the taste. Nevertheless in Europe and America their flesh is in demand, and scientists tell us it has great food value. It may be news to many that eels are caught at certain points in Canada and shipped to the states, where the market for them is steady. The chief centre in Canada for this industry is at Iberville, near St. Johns, Quebec. The Thuot family at that point have a license from the Povernment for laying traps, which extend in a zigzag line almost entirely scroe The Richelleu River, the current of which at that point is about half a mile wide. Early every morning the traps are examined and the oatch removed and deposited in large vats which lie partly submerged near the shore. These vats are the storepuses from which the eels are taken ase the market calls for them. The molien River, by reason of its paddy bottom and the softness of its rater, is said locally to be particularwell adapted for the propagation of Naturalists, however, tell us that they have not very much precise data as to the habits of this fish. But the fact is eels are caught in the Richelleu up to a yard or more in length, with a girth equal to that of average man's arm. Four or five eel catchers are continually employand the director of this unique enterprise is said to have acquired a moderate competence. Shipments they go chiefly to Chicago

Substitute Food Articles in Germany

Amsterdam, Dec. 19.-Ten thousand substitute food articles have been intro onced into Germany since the war, according to a statement made in the Berlin newspapers by Professor Jucke nack, a prominent German tood expert. He mentione as the most striking ex amples of successful substitution the following: Artificial butter, eggs, salad, oil, boney, milk, coffee, tea, sugar, tobacco, fish, sausage, cheese and caviar. Some of the substitutes are directly harmful, but others are so good that they will cutlive the war and become regular articles of consump tion, be asserts.

Swear Not to Trade With Any German

London, Jan. 3. - A firm at Dewsbarv received a postcard from a German in e prison camp esking for price lists and patterns of flannels, si'ks and sating suitable for pyjamas. The firm in reply sent nim a copy of the following "Solemn Oath" which they have

"To mark our horror and disgust at the methods of Germany since July. 1914, we swear that we will not [a] knowingly purchase anything made in Germany; (b) transact business with or through a German for five years after peace is declared. So help as God."

Potato Grower's Convention!

The Annual Convention and Potato Show of the New Brunswick Potato Growers' Association will be held in the Agricul tural School at Woodstock on January, 23rd and 24th 1918. A comprehensive programme and prize list has been prepried. A number of Experts on various phases of potato growing have been secured including H. G. Bell, Chicago, Ill., U. S. A.; W. T. Macoun, Dominion Horticulturist, Ottawa; T. G. Raynor Dominion Seed Inspector, Ottawa, L. H. Newman, Secretary Canadian Seed Growers' Association, Ottawa; S. J. Moore, Representative of Dominion Seed Branch; Hon. J. F. Tweeddale, Minister of Agriculture for N B., and Representatives of the Dominion Experimental Farms. The Prize List of the potato show amounts to \$600.00 covering ten classes of exhibits. Reduced fares on all railways.

From London To Constantinople By Air
