Previous to Stock taking.

The report estimates that tonnage as follows United States, 2,000,000; Great Britain, 1,-050,000 ; France, 356,000 ; all other Powers, 356.000. It must be important, both from humanitarian and economical considerations, that, the canal should be cut through a country which is salubrious and presents fewest difficulties, or most facilities to its construction, and it must depend on the greater or less amount of cost of construction whether the canal will be a successful commercial venture.

surveyed, but all save the Nicaragua and

table. Commodore Ammen holds that the

is subject to a far less heavy rainfall, the

along the southern route. It abounds in

while the other lacks, wood and materials,

and produce and cattle necessary for the con-

struction of the canal, and the support of

the laborers, and the people are more orderly

and industrious than those to the South.

There are no great engineering difficultles

along the Nicaragua route (181 miles in all.

On 119 miles, including 56 miles of the

lake, and 53 of river navigation, the work

will be comparatively light, the great cost

will fall on the 58 miles requiring construc-

tion; the construction of seventeen lift

locks, one tide lock and of two harbors.

Sailing vessels would not be tediously de-

layed at the mouth of the canal as they will be

in Panama Bay where calms prevail, but

favorable winds. The great argument in

favor of this route is, that, the cost of con-

struction, on a common basis of material and

labor (accepting Commodore Ammen's fig-

ures) will be about half of that on the

Panama route, \$52,577,718, against \$94,

511,350. The immense cost of a canal by

the latter route is fatal to its success, the

Commodore savs, as a commercial venture.
