BECKWITH & JORDAN, BARRISTERS-AT-LAW, Solicitors, Notaries Public, Conveyancers, &c. OFFICE-CITY HALL BUILDING, FREDERICTON, N. B.

with, but they cannot be depended upon for this purpose. They do very well for crossing, and come to maturity early. With fair treatment they will keep in good condition and are easily made fit for the butcher at an early age. They are not general in this Province yet, but I would not be surprised to see them become so within a short time.

The Jerseys are the gentleman's cow, beautiful in form, docile in disposition, giving rich milk, and producing a large quantity of butter. They are always appreciated by suburban farmers and those who keep one or two cows for the home supply, but they will never be so generally raised as they are in the United States. Feeding roots must be our means of producing meat, as feeding corn is the case of the western farmer.

As to the different breeds best suited to the soil and climate of this Province, I am inclined to think that the best is the one that will give the most milk and produce the most butter, and that will be the most profitable under the circumstances. The Jersey is the best for these purposes, and I would recommend it to all who are engaged in stock raising.

It is quite impossible to make a thrifty animal out of a half starved one. It is a common error to suppose that the more an animal is starved, the more it will eat, and the more it will grow. This is a mistake, and one that is often made by those who are engaged in stock raising.

MR. R. M'LEOD. Strongly favored the Ayreshires, especially for dairy purposes. He endorsed all that had been said regarding the necessity of keeping cattle dry and clean in the stable. He would like to see further information about feeding mature cattle for the market.

MR. J. R. FAIRWEATHER. spoke against the resolution and proceeded to discuss the main question. He was of opinion that if we were to import more stock we should import as well a new method of feeding them. He favored the Ayreshires and Short-horns, but was anxious to get the Polled Angus trial and he believed the breed would be found to suit our purposes.

schools, which would fit our farmers' sons to take advantage of those higher opportunities afforded by such Agricultural Colleges, as are or may be established. The report was received, adopted, and the President, Secretary, Mr. Peters, and Col. Beer, were appointed a committee to memorialize the Dominion Government on the subject of the report.

MR. HARGREAVES then submitted the following report from the ST. JOHN AGRICULTURAL SOCIETY. Mr. President and Gentlemen:— I accompanied the delegates from the St. John Society for the purpose of being an attentive listener merely to the proceedings of the Association, but my want of practical acquaintance precludes my being able to take part as I should wish in the deliberation of the subjects that may be under discussion.
